ABSTRACT

Documents announced in the Volume 9, Number 3 issue of "Abstracts of Instructional and Research Materials in Vocational and Technical Education" (AIM/ARM) and not available under individual ED numbers are included in this microfiche set. Microfiche availability for these documents is shown in the VT-ED Number Cross Reference List included in AIM/ARM, Volume 9, Number 6. The microfiche set is arranged in the following sequence: (1) a VT number list of those documents in the microfiche set for Volume 9, Number 3, and (2) the full text of documents listed, in ascending VT-number order. The documents are filmed continuously. (Author)

****
* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *
* to obtain the best copy available. Nevertheless, items of marginal *
* reproducibility are often encountered and this affects the quality *
* of the microfiche and hardcopy reproductions ERIC makes available *
* via the ERIC Document Reproduction Service (EDRS). EDRS is not *
* responsible for the quality of the original document. Reproductions *
* supplied by EDRS are the best that can be made from the original. *

TABLE OF CONTENTS

INTRODUCTION ii

VT NUMBER LIST 1

INTRODUCTION

This set of microfiche consists of the documents which are announced in Abstracts of Instructional and Research Materials in Vocational and Technical Education (AIM/ARM), Volume 9, Number 3, 1976 and are not available individually by ED number. These documents are grouped in VT-number sequence and filmed continuously as a microfiche set (AIM/ARM, VT-ERIC SET).

Microfiche availability of documents in this set is shown in the VT-ED Number Cross Reference List in Volume 9, Number 6, of AIM/ARM.

Microfiche copies of individual documents in this set may be obtained by reproducing the appropriate microfiche on microfiche reproduction equipment.

Hardcopy of individual documents in this set may be available from the sources listed in the resume for each document.

This publication was prepared pursuant to a contract with the Bureau of Occupational and Adult Education, U.S. Department of Health, Education and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their judgement in professional and technical matters. Points of view or opinions do not, therefore, necessarily represent official Bureau of Occupational and Adult Education or U.S. Office of Education position or policy.

TITLE: MINI-GRANT PROGRAM FOR CURRICULUM RESEARCH AND INNOVATION. FINAL REPORT.

PERSONAL AUTHOR: TEMTE, WILLIAM

DESCRIPTOR: TEACHER DEVELOPED MATERIALS; *INDIVIDUALIZED INSTRUCTION; CURRICULUM DEVELOPMENT; *INSTRUCTIONAL INNOVATION; GRANTS; *STENOGRAPHY; ANATOMY; PHYSIOLOGY; *TECHNICAL EDUCATION; BUSINESS EDUCATION; *HEALTH OCCUPATIONS EDUCATION; CURRICULUM RESEARCH

IDENTIFIER: WESTERN WISCONSIN VTAE DISTRICT

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 55P.

ABSTRACT: IN AN EFFORT TO IMPROVE CURRICULUM THROUGH THE DEVELOPMENT AND TESTING OF INDIVIDUALIZED INSTRUCTIONAL MATERIALS AND TO INCREASE FACULTY PARTICIPATION IN THE CURRICULUM DEVELOPMENT PROCESS, THREE MINIGRANTS OF $1,000 EACH WERE AWARDED BY THE WESTERN WISCONSIN VOCATIONAL, TECHNICAL, AND ADULT EDUCATION DISTRICT FOR THE 1974-75 FISCAL YEAR. SUMMARIES OF THE PROPOSALS ARE PRESENTED ALONG WITH THE CURRICULUM MATERIAL DEVELOPED BY EACH. "USE OF THE SOUND PAGE SYSTEM FOR SUPPLEMENTARY LEARNING IN THE MECHANICAL DESIGN TECHNICIAN PROGRAM" WAS TESTED IN A STRENGTH OF MATERIALS COURSE. SAMPLE COURSE UNITS ILLUSTRATE THE IMPLEMENTATION OF THE SOUND PAGE, AN AUDIOVISUAL AID CONSISTING OF A WRITTEN OR GRAPHIC IMAGE AND THREE MINUTES OF RECORDED NARRATION. THE PROPOSAL, "DESIGN, TEST, AND PREPARE MATERIALS FOR AN OPEN LABORATORY IN ANATOMY AND PHYSIOLOGY", CONTAINS A COURSE DESCRIPTION, AND LEARNING GUIDES AND EXAMINATIONS DEVELOPED FOR THREE MODULES: THE REPRODUCTIVE SYSTEM, ENDOCRINE SYSTEM, AND EMBRYOLOGY. THE BUSINESS EDUCATION PROPOSAL IS "INDIVIDUALIZATION OF ADVANCED SHORTHAND THROUGH THE DEVELOPMENT OF SELF-INSTRUCTIONAL MATERIALS". THE TERMINOLOGY UNITS CONTAIN A PROGRAMMED TEXT, VOCABULARY WORDS APPLICABLE TO A PARTICULAR OCCUPATION, SPEED BUILDING CASSETTE TAPES, AND PRACTICE CASSETTE TAPES. (AUTHOR/RG)

Individualization of Advanced Shorthand Through the Development of Self-Instructional Materials

WESTERN WISCONSIN VOCATIONAL, TECHNICAL AND ADULT EDUCATION DISTRICT

MINI-GRANT PROGRAM FOR CURRICULUM RESEARCH AND INNOVATION

PROJECT NUMBER 02-040-151-225

FINAL REPORT

I. STATEMENT OF PROBLEM

In an area such as the Western Wisconsin Vocational, Technical and Adult Education District there are a great many divergent needs which must be met to fulfill the mission of providing a comprehensive program of vocational, technical and adult education. Because of the diversity of these needs, curriculum improvement must be an ongoing process. In the past several years, the District has carried out several research projects which are directed towards providing a more flexible format for the delivery of its educational services. These projects have led to the implementation of the Quarter System as the basic time reference for classes, new curriculum in established career fields, as well as emerging occupations and the individualization of instruction in some areas. It is recognized that when the needs of the people to be served are varied, the approach to providing educational services must also be varied and sufficiently flexible to meet the individual needs. Individualization of instruction can be accomplished in many ways. The basic time frame reference can be individualized, the mode of learning can vary, and the materials can also be individualized.

In order for the District to continue its movement towards the improvement of educational services, it is important that continued research be conducted and new curricula be developed.

II. OBJECTIVES

The objectives of this project are to:

1. Provide a means by which the District, under the guidance of the Research Coordinating Unit, can award mini-grants to staff during the 1974-75 fiscal year for the purpose of developing and testing individualized instructional materials.
2. Increase faculty participation in the curriculum development process through mini-grants to
   a. bring all curriculum development efforts under one project.
   b. improve coordination.
   c. ensure continuity in curriculum development efforts.

III. PROCEDURES AND OUTCOMES

Three proposals were approved under Project Number 02-040-151-225. These proposals were chosen for funding in that they represented three different instructional divisions and three different basic approaches to individualized instruction.

The following proposals were funded:

1. **Industrial Division** -
   Use of the Sound Page System for Supplementary Learning in the Mechanical Design Technician Program
2. **Health Occupations Division** -
   Design, Testing and Preparation of Materials for an Open Laboratory in Anatomy and Physiology

5

3. **Business Division** -

Individualization of Advanced Shorthand Through the Development of Self-Instructional Materials

Each of the three funded proposals were providing a budget of $1,000.00. To ensure maximum utilization of research funds, each grantee was instructed to utilize the District's resources to the greatest possible extent for the production of audiovisual aids and instructional materials.

Faculty members from the various instructional divisions were selected on the basis of their expertise and interest in individualization of instruction. The division chairmen, of each respective division, supervised the project activities within their area.

All wages paid to the faculty were in addition to their salaried contracts.

PROPOSAL 1

USE OF THE SOUND PAGE SYSTEM FOR SUPPLEMENTARY LEARNING IN THE MECHANICAL DESIGN TECHNICIAN PROGRAM

SUMMARY OF ACTIVITIES

INTRODUCTION TO THE STUDY

STATEMENT OF THE PROBLEM

The central problem of this study is to investigate if instructional sound pages can be used successfully in the instruction of courses in mechanical technology and if they are more efficient than the traditional lecture-laboratory method of instruction. The experiment is to be conducted using the 6-06-147 Strength of Materials course in the Mechanical Design Technician Program at Western Wisconsin Technical Institute in La Crosse, Wisconsin, during the 1975 and 1976 school years.

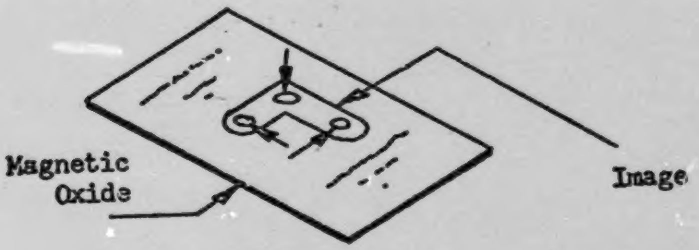
HYPOTHESES STATEMENTS

Instructional sound pages can be utilized successfully in the instruction of mechanical technology courses.

There is a significant difference in the competency levels of the students taught utilizing instructional sound pages and those taught utilizing the traditional lecture-laboratory method of instruction.

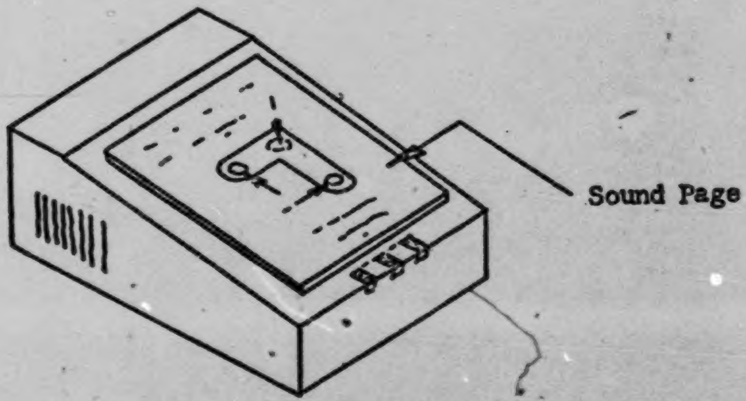
DEFINITION OF TERMS

(1) Sound Page. A standard size sheet of paper with one side coated with magnetic oxide. When completed the sound page will consist of a written or graphic image and three minutes of recorded narration that provides the student with both audio and visual instructions.



Sound Page

(2) Sound Page Machine. A magnetic sheet type recorder and playback unit that provides the instructor with a simple means of conveying information and also provides the student with easy access to both the audio and visual portions of an instructional program.



Sound Page Machine

(3) Student Learning Plan. A listing by the teacher of the instructional activities that will make up the course.

(4) Self-Paced Instruction. An instructional approach that allows each student to proceed at his own rate to lean the prescribed material and achieve the specified objectives.

(5) Traditional Lecture-Laboratory Approach. The familiar approach where the instruction is administered to groups of students with each individual expected to learn at the same pace within the same time units; group-paced.

(6) Learning Laboratory. A designated area which serves as a center of activity for the self-paced instruction, where students can consult with their instructor, view sound pages, work problems, take examinations and pick up course materials.

QUESTIONS

The following questions are to be tested in this study:

1. Can instructional sound pages be used successfully in the instruction of courses in mechanical technology?
2. What are the specific problems encountered by the instructor when developing and using instructional sound pages?
3. What are the specific problems encountered by the students when using instructional sound pages?
4. Will instructional sound pages allow the student to complete course objectives at his own pace?
5. Will slower students benefit more from instructional sound pages?
6. Will advanced students achieve more from instructional sound pages?
7. What equipment is required for an instructional sound page system?
8. Can instructional sound pages be used to supplement traditional classroom instruction?
9. How much time is required for developing sound pages?
10. Are there any administration problems created when the sound page system is used?

SOUND PAGE - INTRODUCTION A

This sound page is an introduction to Strength of Materials, Course Number 6-06-147. You should have taken Statics 6-06-133 and Materials 6-06-126 before you begin Strength of Materials.

Strength of Materials is the study of a material's internal resistance to the effects of applied loads and strain. Simply, it's how materials react internally when they are subjected to external loads.

In this course you will learn what stresses are and how to compute them. You will be able to determine the size of machine parts that are subjected to torsion, bending and combined stresses. You will be able to select safety factors and allowable stress for various loading conditions.

For this course you will need a slide rule or calculator, a trig table and a supply of 8-1/2 x 11" plain paper for problems.

There is at least one sound page for each unit. These sound pages will give all the basic instructions for each unit. You must follow your schedule and complete each unit in order. Problem sheets and exams for each unit can be obtained from the instructor as you need them.

The basic principles you learned in Statics along with the ones we are about to cover in Strength of Materials will be important fundamentals for machine design.

If you would like a refresher in basic Statics, before going on to Unit I, ask for sound page Introduction B. If not start with the first sound page of Unit I, Sound Page I-A

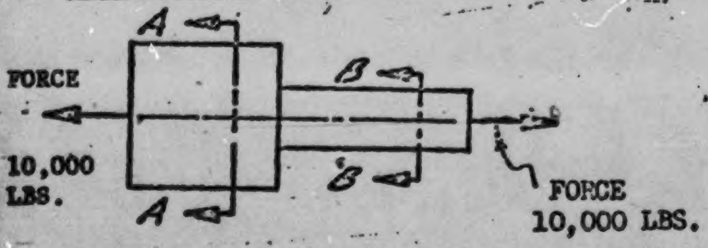
STRESS: HOW IS IT DETERMINED?



A
A
B
B
FORCE
10,000 LBS.
FORCE
10,000 LBS.

Example Problem

AREA A-A = 2 In.^2 AREA B-B = 1 In.^2

$$S_{A-A} = \frac{10,000 \text{ LBS}}{2 \text{ In.}^2} = 5,000 \text{ PSI}$$

$$S_{B-B} = \frac{10,000 \text{ LBS}}{1 \text{ In.}^2} = 10,000 \text{ PSI}$$

SOUND PAGE I-A - BASIC STRESS

This sound page will introduce you to simple stresses and show you how to determine stress values for a given part of material.

Let's first explain what stress is. Stress is a material's internal resistance to the application of external forces. As shown here, as the external force is applied, an internal stress is created, opposing the load. If the external loal should exceed the total internal stress the material will deform rapidly and failure will occur.

Think of stress as being many small internal forces that are opposite in direction and equal in magnitude to the external force.

Let's now see what stress is equal to. As we stated before, the total stress must be equal to the external force and the stress is many small forces distributed equally across the inside area of the part. Therefore, stress is equal to the external force divided by the cross sectional area of the part. With the force expressed in units of pounds and the area in square inches, the stress must then be expressed in pounds divided by inches squared or pounds per square inch. PSI is used to abbreviate pounds per square inch.

Let us now try to determine the stress in a given part. The example part shown at the bottom has a 10,000 pounds tensile force acting on it. The internal stress is to be determined at Section A-A and B-B. The stress at Section A-A is found by dividing the 10,000 pounds force by the area at A-A, in this case, two square inches. The stress at A-A equals 5,000 PSI. The same calculation can now be made at Section B-B which has a smaller area of one square inch. The stress at B-B equals 10,000 PSI

It is important to note that as the area is decreased the stress increased. So, therefore, a part can be made stronger by increasing its area.

If you don't understand basic stress, replay this sound page, see your reference list or talk with your instructor. If you do understand this sound page completely go on to sound page I-B.

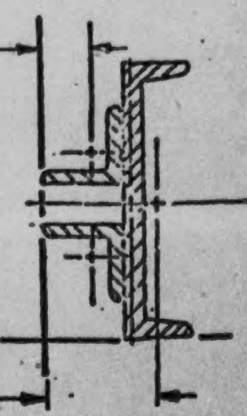
$$\bar{x} = \frac{(A_1 \times d_1) + (A_2 \times d_2) + (A_3 \times d_3)}{A_1 + A_2 + A_3}$$

$$\bar{x} = \frac{(8.82 + 3.67) + (2.77 + 2.08) + (2.77 + 2.08)}{8.82 + 2.77 + 2.77}$$

$\boxed{\bar{x}}$ = 3.06 inches (From Y-Y)

d_2 and d_3

equals 3- .92



d_1 equals 3+ .67

SOUND PAGE II-H - CENTROID

In this sound page we will explain how to locate the Centroid point of a complex area.

Shown in Figure I is the area of composite section made up of a channel and two angles. Becuase of symmetry, the $\bar{y}$ must equal to one-half the height of the channel. The perpendicular to the Y-Y reference line is the dimension that must be calculated.

From the tables in Figure II we can obtain the areas and the distances for the specific channel and angles that make up this cross-section.

In Figure III the proper values that are underlined in Figure II are substituted into the equation.

$$= \frac{(8.82 \times 3.67) + (2.77 \times 2.08) + (2.77 \times 2.08)}{8.82 + 2.77 + 2.77}$$

Notice at the right that d_1 is equal to 3 inches plus .67 and d_2 and d_3 are equal to 3 inches minus .92.

IF YOU UNDERSTAND THIS SOUND PAGE GO ON TO THE NEXT ASSIGNMENT ON YOUR INSTRUCTIONAL SCHEDULE.

PROPOSAL 2

DESIGN, TEST AND PREPARE MATERIALS FOR AN OPEN LABORATORY IN ANATOMY AND PHYSIOLOGY

SUMMARY OF ACTIVITIES

Participants: Mary Ekern, James Stacey, Mary Rusche

I. Individual Progress Reports

Mary Rusche	Learning guides complete (three)
Reproductive System Module	Sample Learning Guide, attached
(3 units)	All slides at Instructional Media Center
	Script - rough draft - written but not taped
	Examination not complete, rough draft only
Mary Ekern	Learning guides - complete
Endocrine System Module	Sample learning guide and script
(7 units)	Slides - 6 units complete at Instructional Media Center
	Script - written but not taped - 6 units
	Examination not complete - rough draft only
	One unit complete except for typing and slides to Instructional Media Center
James Stacey	Study questions and examination complete, no learning guide
Embryology Module (2 or 3 units)	Slides not complete
	Script not complete
	Module may consist of 2 or 3 units. Unit consists of one slide-tape presentation
	Study questions and examination - complete

II. Allocation of next unit

Mary Ekern - Urinary System and Fluids and Electrolyte Balance

Mary Rusche - Respiratory System

James Stacey - Nervous System

III. Purpose, Objectives and General Plan of the Course

The purpose of this course is to provide a basic and integrated understanding of human structure and function as a foundation for the development of technical skills of associate degree students in health related fields.

The course objectives are to provide an understanding of the concepts that:

A. Anatomical structures and their organizational function as an integrated unit.

B. Structures of the body determine their function; bodily functions determine their anatomical structures.

C. Ultimately the body's functions are its' cells functions.

D. Survival is possible because of the ability of the body to adapt to internal and external environment.

The General Plan is to filfill the purpose. The course will be divided into three sessions providing group and individual learning experiences. Specifically:

A. General Assembly Session - One hour per week

1. Introduction and presentation of broad concepts
2. Administrative activities
3. Examinations

B. Independent Study Sessions - approximately four hours per week

  1. Main source of factual information, concepts and their application
  2. Self-pacing
  3. Multiple Learning Activities
  4. Self-evaluating

C. Small Group Sessions One hour per week

  1. Opportunity for the student to actively participate in the clarification, discussion and presentation of relevant material.
  2. Quiz

The course is offered in two terms of twelve weeks each. The academic credit is four credits for each course.

IV. Tentative Plan for Pilot Group (Total time allocated - four weeks)

A. General Assembly Session - One hour

  1. Orientation (Monday)
     Endocrine Films
  2. Endocrine Examination (Friday)
     Reproductive Films
  3. Embryology Films (Friday)
     Reproductive Examination
  4. Embryology Examination (Friday)

B. Independent Study

Learning guides and slide tapes

1. Endocrine 7 units
2. Reproductive 3 units
3. Embryology 2 or 3 units

C. Small Groups (Meet on Tuesday, Laboratory day for one hour per week)

Twenty-four students

Eight per group for discussion and quiz

One group per instructor

D. Evaluation of Pilot Group

1. Instruction Evaluation
   - a. Review of units of other instructors
   - b. Students participation in small group discussion
   - c. Item analysis of examination scores - (Same examination for pilot group and regular group)
2. Student Evaluation
   - a. Evaluation form for each slide-tape presentations, learning guides and small groups.
   - b. Comparision of examination score with students in regular program.

V. Pattern for Learning Guide

A. Objectives

B. Work sheet may include any or all of the following:

1. Diagrams
2. Questions
3. Problem solving
4. Models
5. Dissection

Behavioral objectives designed for quiz, small group participation and testing of terminal unit performance. All unit examinations will be multiple choice. Quizzes are designed to match behavioral objectives.

Work Sheets/Learning Guides serve as study guides, as they involve multiple learning tasks to aid the student in initial learning and retention.

VI. Planning for Total Course

A. Introduction

In planning for individualization of Anatomy and Physiology several factors were reviewed. Number of students, faculty, room utilization and equipment needed were discussed, in addition to the general plan of the course content.

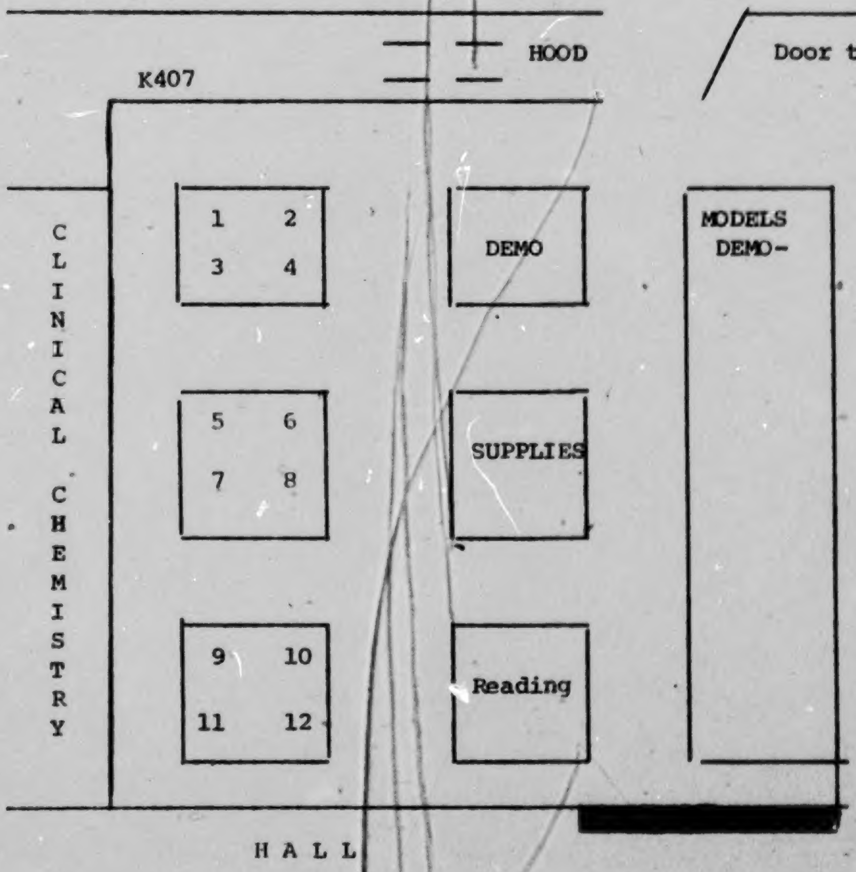
A plan for adaption of K407 is attached. This seems more feasible than completely equipping 16 new carrels - If new building is planned, it would be advisable to include new carrels for Anatomy and Physiology in the planning.

A plan for faculty staffing is presented. It is based on 200 students. This will include Dental Associate Degree Students (36) and increase of 10 in Technical Nursing.

B. Design for utilization of K407

1. Table top usage

   a. Caramate (type of hardware)
      Kodak slide trays
      Could be placed on lab bench
   b. Karl Friedline (Instructional Media Center) would have replacement, if repair needed.
   c. Monna Thompson recommended this as best for table top.



HOOD
Door to 406
K407
CLINICAL CHEMISTRY
1 2
3 4
5 6
7 8
9 10
11 12
DEMO
SUPPLIES
Reading
MODELS
DEMO-
HALL

NOTE: This would probably cause problem with use of room for Clinical Chemistry.

C. Alternate Plan for equipment:

1. Equipment:

a. 55 hours per week coverage

b. Each student spends 4 hours/week in carrel = 200 x 4 = 800 booth hours per week.

800 ÷ 55 = 14.5 or 15 carrels needed as minimum - Would recommend 16 carrels to cover peak times

c. Cost of carrell and equipment

$7000
16 carrell
16 Sawyer
16 Telex recorders
32 head sets

d. Lab Area

Display (5 setups)

Literature (4 copies) area for reading

Dissection (16 small pan set ups)

One rat per student, small pan-setup

D. Student - Faculty Plan

1. Number Students - 200

Classes	Weekly
1. General Assembly Session	1 hour
2. Small Group of 8-10 students 20 groups	1 hour
3. Independent Study	4 hours

2. Instructors

a. Team Leader (1) - 2 groups + General + AVT

b. Group Leaders (4) - 6 groups + AVT (12 hours)

c. AVT Coverage - 8-10 pm Monday through Thursday; 8-5 pm Friday; 8-12 Saturday

3. This would preclude instructors teaching other courses. AVT could be covered by a teaching assistant with proper guidance, possibly a graduate biology (Major Zoology) student. If faculty had other classes AVT time could be reduced, however, it is essential for total course for all instructors to participate in AVT portion.

WESTERN WISCONSIN TECHNICAL INSTITUTE - HEALTH OCCUPATIONS DIVISION

CLASS SCHEDULE

PROGRAM: Tentative Schedule

TERM: ____ YEAR: ____

HR.	MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY	SATURDAY
(0) 7- 8						
(1) 8- 9	General Assembly	AVT	Group 8 AVT	AVT	Group 17 AVT	AVT
(2) 9-10	AVT	Group 4		Group 12		
(3) 10-11			Group 9		Group 18	
(4) 11-12	Group 1	Group 5		Group 13

ANATOMY AND PHYSIOLOGY
STUDY GUIDE

ENDOCRINE SYSTEM

PART I

INTRODUCTION

OBJECTIVES:

1. Identify the basic differences between endocrine and exocrine glands.

2. Name and locate the endocrine glands of the body.

3. Identify the basic differences in endocrine and nervous system control and integration of body functions.

4. List the general functions of the endocrine system?

5. Define "hormone", "target cell" and "endocrine system".

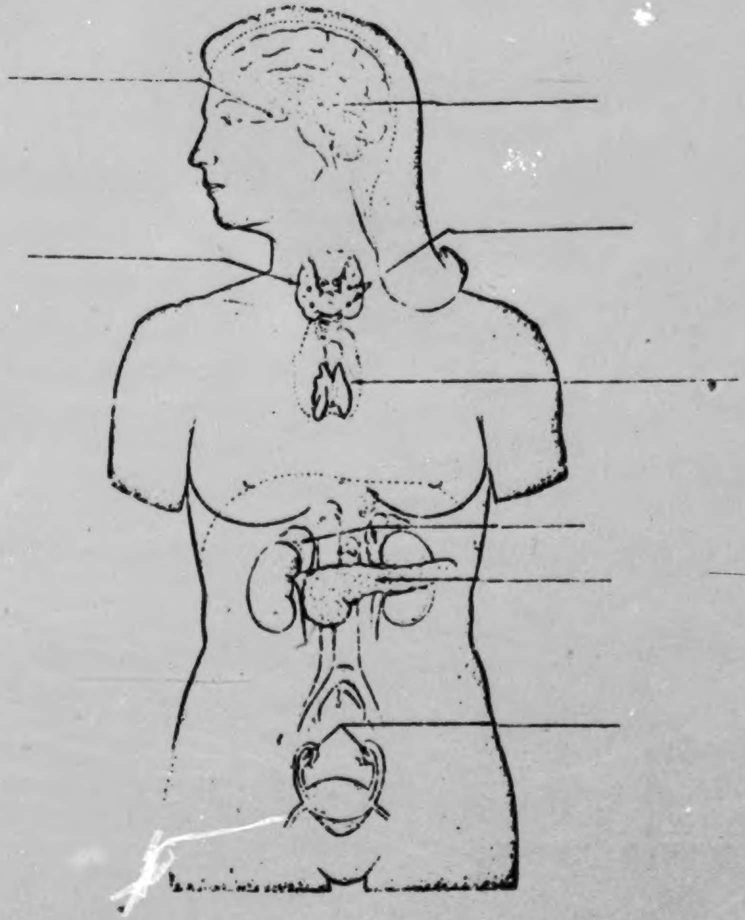
6. Describe the chemical nature of hormones.

7. Identify the types of chemical reactions hormones control.

8. Explain the role of cyclic AMP in hormone action.

I. Define Endocrine System

II. Label the following diagram.



III. How are endocrine glands different from other glands?
Define Endocrine Gland.

Define Exocrine Gland.

IV. List the basic functions of the endocrine system.

1.

2.

3.

V. Exercise #1

Compare and contrast the nervous system and endocrine system control mechanisms using page 267 of your text as an information source.

Characteristics	Nervous System	Endocrine System
Mechanism or tools of control		
Method or Route of communication		
Types of cells controlled		
Type of response expected		

VI. How the endocrine system carries out its functions.

Define Hormones.

List the chemical reactions hormones control.

1.

2.

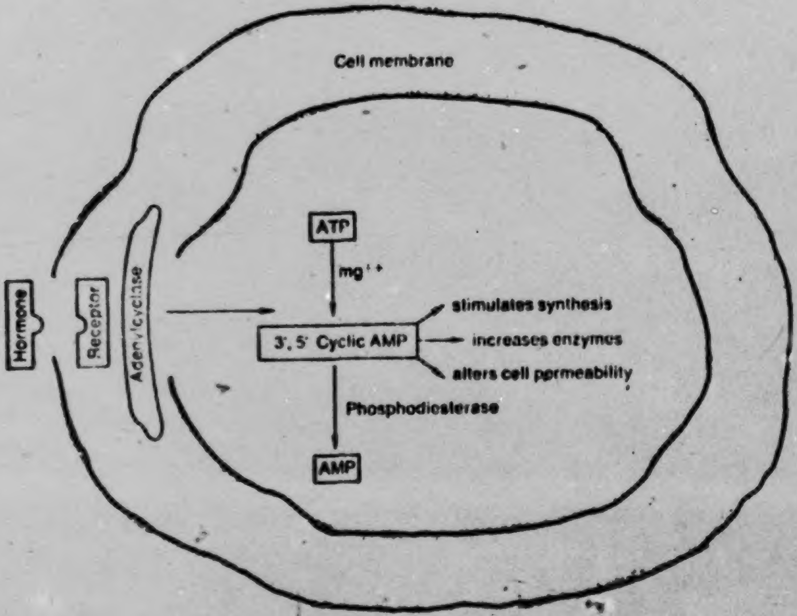
3.

4.

5.

Define target tissue -

Method of Action of Hormones.



Cell membrane
Hormone
Receptor
Adenylcyclase
ATP
mg⁺⁺
3', 5' Cyclic AMP
stimulates synthesis
increases enzymes
alters cell permeability
Phosphodiesterase
AMP

REVIEW QUESTIONS

1. How are endocrine glands different from other glands?

2. What is the function of the endocrine system?

3. Where is the pituitary gland located? the adrenal gland? the thyroid gland?

4. How does nervous system control differ from endocrine system control?

5. What is a hormone?

6. What chemical reactions are controlled by hormones?

7. What is a target tissue?

8. Why is cyclic AMP called a "second messenger" in hormone action?

ANATOMY AND PHYSIOLOGY

ENDOCRINE SYSTEM

* Slide No. PART I

INTRODUCTION

Hello, welcome to the wonderful world of learning. Today I would like to introduce you to the endocrine system. But before we begin, let me introduce myself. My name is Mrs. Ekern and my office is K-408. If you need any assistance with this material please feel free to come in and discuss it with me or one of the instructors on duty in the auto-tutorial lab.

Before we begin, please open your study guide to page 1. On this page you will find a list of eight objectives or goals you should be able to fulfill after you have completed this presentation. Please stop the tape and read these objectives.

Let us begin by defining what constitutes the endocrine system. *2 The endocrine system consists of a diverse group of ductless glands which produce and secrete chemical regulators called hormones, directly into the blood stream. You may wish to stop the tape and write this definition in your study guide.

The names and locations of the endocrine glands we will be studying are seen on this next slide. *3 Stop the tape and label the diagram in your study guide.

Before we begin studying each individual endocrine gland, it would be advantageous to discuss the common characteristics of the entire endocrine system. We want to answer such questions as ___ *4 What makes the endocrine glands different from other glands? *5 What are the basic functions of the endocrine system? *6 How are the functions of the endocrine system similar to those of the nervous system? *7 How does the endocrine system carry out its functions?

First *8 how are endocrine glands different from other glands? The glands of the body are divided into two categories, endocrine and exocrine. *9 Endocrine refers to glands without ducts that secrete chemicals called hormones. In contrast exocrine glands release their secretions into ducts which transport the secretions to their area of need usually outside of the body or in body cavities. *10 An example of some well known exocrine glands are sweat glands, mucous secreting goblet cells, and salivary glands. Can you name any others? The pancrease consists of both an exocrine gland and an endocrine gland. *11 The exocrine portion of the pancrease produces pancreatic enzymes which are transported via the pancreatic ducts to the duodenum where the enzymes help digest foods. In contrast the endocrine glands of the pancreas produce the hormones insulin and glucagon which are secreted into blood capillaries surrounding the pancrease. The hormones are thus carried in the blood to every cell in the body, where they can regulate the amount of glucose getting into the cell for energy utilization. Before you continue you may wish to take down the basic definitions of exocrine and endocrine glands in your study guide.

*12What is the basic function of this endocrine system? *13 The basic function of the endocrine system is to communicate, control and integrate all the tissues of the body into a functioning unit so that it can grow and adapt to changes in its external and internal environment. These are the same basic functions of the nervous system but each of these systems accomplish their tasks in a different way with different tools. Stop the tape and complete Exercise I in your study guide.

Let's go over what you have just completed. *14 The mechanism and tools of control for the nervous system consists of nerve impulses communicated via nerves from one specific structure to another. In contrast the endocrine system uses hormones communicated via the blood to all cells of the body. The nervous system can control only muscle and gland cells directly while the endocrine system can control directly all cells of the body or only specific target tissues. The response expected from nervous control is rapid and short lasting, while endocrine control provides a slow but long lasting response.

The endocrine system carries out its functions of control and integration through chemical regulators called hormones. Let's therefore discuss what these hormones are chemically and how they act to control and integrate the body tissues. *15 Most hormones are protein or steroid molecules. They are unique chemicals that do not initiate a chemical reaction but act to control the rate at which a chemical reaction proceeds. I like to think of a chemical reaction as a bus trip to Minneapolis and the hormone as the man regulating the gears. We would get to Minneapolis in low gear just as well as in high gear but a hormone shift into high gear would get us there a whole lot faster and more efficiently. If there is a load of emergency blood on this bus for transport, the ability to shift into high gear could be a life and death matter. Unfortunately, chemical reactions are more complex and diverse than a bus trip. The *16 chemical reactions, hormones control are the chemical reactions involved in cellular metabolism, growth and development, cellular differentiation and reproduction. Also by controlling chemical reactions hormones allow us to maintain homeostasis in stressful situations.

The cells acted on by hormones are referred to as "targets". Some hormones act on only one type of cell or tissue. For example, the thyroid stimulating hormone acts only on thyroid gland cells. Other hormones can act on every cell of the body. An example of this is the thyroid hormone thyroxine, which regulates the metabolic rate of every cell.

The mechanisms by which hormones control cellular chemical reactions are not completely known yet. Since most hormones are large molecules that cannot get inside their target cells they must exert their control somehow through the cell membrane. *17 It was recently found that some hormones react with their specific target cell membranes to cause the release of an enzyme called adenyl cyclase inside the cell. Adenyl cyclase then catalyzes the breakdown of ATP to cyclic AMP. Cyclic AMP then acts as the "second messenger" inside the cell to control specific chemical reactions. For additional information on cyclic AMP stop the tape and read the optional reading article provided at the center table.

Well we are just about finished introducing this very interesting but complex endocrine system. If you have not already done so - fill in the information required in your study guide, so you will have complete notes when exam time comes. It also may be helpful to answer the review questions at this time to see if you understand the material you have been presented.

Good luck - and see you in Part II of the endocrine system.

WESTERN WISCONSIN TECHNICAL INSTITUTE
Health Occupations Division
ANATOMY AND PHYSIOLOGY

EMBRYOLOGY

STUDY QUESTIONS AND REVIEW:

1. Define embryology.

2. What are the six (6) hormones involved in pregnancy? Describe the effects these hormones have on structures and processes.

3. Define ovulation, insemination and fertilization (be aware of synonymous terms). Describe the role of female reproductive organs in these processes.

4. Trace the movement of an egg from the ovary to the uterus. When and where does fertilization normally occur? What happens to a fertilized egg (zygote) as it passes into and implants in the uterus? What is implantation?

5. Identify the germ layers and the types of tissue they will produce.

6. Describe the function of six (6) extra embryonic structures (i.e., those not truly a part of mother or fetus). Also identify their anatomic relationship to both fetus and mother.

7. Describe the structure of the placenta and the activities taking place there.

8. In what order do the different systems appear and become functional?

9. Discuss maternal changes during pregnancy.

10. Explain the three (3) stages of childbirth.

11. Describe, in detail, the anatomy and function of fetal circulation and distinguish between fetal and adult circulation.

12. Review cell reproduction, reproductive anatomy and Rh factor.

    1) In one (1) typewritten page discuss the following topic: "How is the reproductive system of humans uniquely suited to the preservation of the species". You must describe 20 different structures, tissues, and processes or characteristics that contribute to successful childbirth.

    2) In one (1) typewritten page or orally describe a congenital abnormality. Be sure to identify what it is, how it differs from normal, how it occurs, what are its consequences. You must identify two sources. Do not copy!

WESTERN WISCONSIN TECHNICAL INSTITUTE
Health Occupations Division
ANATOMY AND PHYSIOLOGY

EMBRYOLOGY

Examination 1

1. Define embryology

2. Identify 4 Hormones involved in pregnancy.

3. What two (2) Hormones will be present only during pregnancy and what does each do?

4. Identify 4 effects of LH on bodily tissue or reproductive process.

5. Fertilization is synonymous with:
   A. Conception
   B. Insemination
   C. Coitus
   D. Ovulation

6. Fertilization normally occurs in the:
   A. Ovary
   B. Upper third (1/3) of uterine tube
   C. Ectopia
   D. Uterus

7. What cell organelle aids the movement of an ova toward the uterus:
   A. Peristalsis
   B. Fimbria
   C. Fallopian tube
   D. Cilia

8. How does implantation occur? Will an unfertilized egg implant?

9. Identify three tissues derived from Mesoderm.

10. Explain the value of 4 extra embryonic tissues.

11. Which two (2) of the following become functional last?
    A. Nervous system
    B. Digestive system
    C. Urogenital system
    D. Circulatory system

12. Describe, in writing and/or with a simple labelled diagram, how the placenta can exchange nutrients and waste.

13. Itemize six (6) normal maternal changes occurring during prenancy (be specific).

14. What are the functions of the following during second stage of childbirth?
    A. Cervix

    B. Fundus

15. For what reason does the fetal heart differ from the adult heart?

16. What will result if either the ductus arteriosus or foramen ovace does not close?

17. Identify the Rh condition that will produce compatibility problems.

18. Label the following diagram.

EMBRYOLOGY

Quiz I

1. Embryology may be defined as the science of the development of:
    a. Egg and sperm
    b. The individual prior to birth
    c. The individual throughout his growing years
    d. The genitalia

2. All of the following contribute to successful pregnancy except:
    a. Maintenance of the endometrium
    b. Existence of an umbilical cord
    c. Presence of amnion and amnionic sac
    d. Development of mammary glands for lactation

3. Mitosis and Meiosis differ by which of the following statements:
    a. Mitosis occurs in somatic tissue; meiosis occurs in germ tissue
    b. Mitosis occurs in males; meiosis occurs in females
    c. Mitosis prodices two cells identical to mother cell; meiosis produces four cells identical to mother cells
    d. Mitosis produces cells of 23 chromosomes; meiosis produces cells of 46 chromosomes

4. An egg of ova moves down the fallopian tube by:
    a. Gravity
    b. Peristalsis
    c. Uterine contractions
    d. Menstrual flow

5. An ova is normally fertilized in the:
    a. Ovary
    b. Uterus
    c. Oviduct
    d. Vagina

6. In the developing embryo, the first system to become functional is the
    a. Circulatory
    b. Nervous
    c. Digestive
    d. Urogenital

7. All of the following are characteristic maternal changes during pregnancy except:
    a. Bluish-purple coloration of the vulva
    b. Striae of the abdomen
    c. Decreased total blood volume
    d. Eversion of the navel

8. The uterus is capable of containing a growing fetus primarily because it is:
    a. Muscular
    b. Devoid of nerves
    c. Closed at the cervix
    d. Elastic

9. An opening, the foramen ovale, exists in fetal circulation in order for blood to:
   - a. Enter the liver
   - b. Bypass the lungs
   - c. Return to the placenta
   - d. Bypass the digestive system

10. Which of the following does not represent a congenital abnormality:
   - a. Syphilitic blindness
   - b. Mumps (Infectious Parotitis)
   - c. Cleft palate and harelip
   - d. Patent ductus arteriosus

LEARNING GUIDE: R-1

REPRODUCTION OF CELLS

Assignment: Chapter 17 Textbook of Anatomy and Physiology Anthony and Kolthoff

INTRODUCTION

Reproduction is essential to the survival of each individual and to the human species. The reproductive processes can be divided into two closely related types, cellular and species. This unit deals with cellular reproduction that occurs continuously to provide the body with new duplicate cells and with the cells necessary to reproduce the human species.

OBJECTIVES:

1. Given a list select the definition for DNA and a gene.
2. Given a list, select the one word that best describes the function of DNA.
3. Given a drawing of a portion of DNA molecule label the components and accurately pair the bases.
4. Explain briefly the formation of RNA, including pairing, types and uses of RNA in the cell.
5. Briefly describe by diagram or in writing the importance of the gene to the cell.
6. Select an example of a cell that synthesizes more proteins than it needs for its own use.
7. Identify the definition of replication of DNA.
8. Define mitosis, meiosis, spermatogenesis and oogenesis.
9. Match the five phases of mitosis with their characteristics.
10. Briefly describe how meiosis differs from mitosis, including number of chromosomes resulting in daughter cells.
11. Demonstrate by a diagram the end chromosomal number resulting from spermatogenesis and oogenesis.

PROCEDURES:

1. Slide-tape #
2. View microscopic slides of white fish mitosis for drawing and identification.

PROCEDURES CONTINUED:

3. Examine models of mitosis for study of individual phases, and models of DNA-RNA.
4. Answer study questions.
5. Participation in group discussion.
6. Quiz.
7. Examination (Multiple choice questions)

STUDY QUESTIONS:

1. DNA may be defined as ______________________________.
2. A segment of DNA, consisting of a chain of about 1000 pairs of nucleotides is a ______________________.
3. The function of DNA may be best described as ______________________.
4. Draw a portion of a DNA molecule, correctly pairing the bases.
5. In RNA the __________ is substituted for thymine and pairs with __________.
6. The types of RNA are:
   a.
   b.
   c.
7. The function of RNA is ____________________, ____________________.
8. Describe by a written statement or diagram the importance of the gene to the cell.
9. The process by which DNA duplication or reproduction is accomplished is called ____________________.
10. Which of the following cells does not synthesize more proteins than it needs?
    a. Thyroid
    b. Adipose
    c. Adrenal
    d. Liver
    e. Alpha and beta cells
11. ______________ may be defined as a process by which cells reproduce to form two like cells.

STUDY QUESTIONS CONTINUED:

12. MATCHING: Each item in the right column may be used several times.

_____ a. Prepares for division

_____ b. Chromosome shorten and thicken; attach to centromere

_____ c. Divided schromosome and centromere move to opposite poles

_____ d. DNA uncoils, nucleolus and nuclear membrane reappear, spindle fibers disappear

_____ e. ENA replication

_____ f. Nucleolus and nuclear membrane disappear

_____ g. Centrioles move to opposite poles of cell and spindle fibers appear

_____ h. Chromosomes aligned across equator of cell

_____ i. Cytoplasm begins to divide by pinching in of cell membrane

1. metaphase
2. telophase
3. prophase
4. anaphase
5. interphase

13. Define meiosis:

14. List the differences between mitosis and meosis.

15. How does spermatogenesis differe from oogenesis? (include chromosomal number and final results).

16. Using the DNA-RNA Models build a DNA molecule of at least 6 bases - then construct a matching RNA Model .

QUESTIONS FOR DISCUSSION:

1. PTC taste test for genetic inherited factor.

2. Be prepared to discuss briefly one genetic disease (3-4 minutes).

Learning Guide: R-1

MITOSIS FIVE PHASES

USE LOWER PORTION OF EACH COLUMN TO MAKE A DRAWING FROM MICROSCOPE SLIDE.

INTERPHASE	PROPHASE	METAPHASE	ANAPHASE	TELOPHASE
1. Cell grows & prepares for division.	1. Chromosomes thicken coiled DNA.	1. Chromosomes align across equator of spindle fibers.	1. Centromeres divide in two chromatids to compose each chromosome from each other.	1. DNA uncoils chromosome elongated.
2. DNA replicates forming 2 chromatids	2. Centrioles move to opposite poles of the cell	2. Nucleolus & nuclear membrane disappear	2. Centromere (halves) more to opposite poles pulling 1 chromatid (chromatid becomes chromosome)	2. 2 new nucleolus 2 new nuclear membrane
3. Chromatids attached to centromere.	3. 1 chromosome = 2 chromatids attached at centromere	3. Each pair of chromatids attached to spindle fiber.		3. Spindle fibers disappear
	4. Spindle fibers appear poles			4. Cytoplasm begins to divide cell membrane. Pinches in, in middle, along equator.

PROPOSAL 3

INDIVIDUALIZATION OF ADVANCED SHORTHAND THROUGH THE DEVELOPMENT OF SELF-INSTRUCTIONAL MATERIALS

SUMMARY OF ACTIVITIES

STATEMENT OF THE PROBLEM

The purpose of this project is to establish a number of individualized advanced shorthand terminology units for use in either a classroom or a self-taught situation. Three units are to be developed, utilizing terminology which is applicable to the following:

1. Banks and Financial Institutions
2. The Trane Company
3. The Petroleum Industry

OBJECTIVES

The objectives of this project are to:

1. Increase the vocabulary of the students by familiarizing them with terminology common to specific occupational clusters.
2. Provide the students with a means to study and learn in either a classroom or in an individual situation.

FORMAT

Three terminology units were written and completed. Each unit contains (1) a programmed text, (2) a listing of approximately 300 words applicable to a particular occupation, (3) speed building cassette tapes, and (4) practice cassette tapes. Selected reproductions of the text are attached.

The purpose of each unit is to familiarize the students with specific occupational terminology, the spelling of the terms to develop shorthand shortcuts (a shorter method of writing shorthand outlines), and to utilize the shorthand shortcuts in actual letter transcription.

The student will work with a list of approximately 25 words at a time. The terminology which is specific to a particular occupation is presented in typed form with the standard shorthand outline presented opposite to it. From this, the students are instructed to develop shorter forms in their notebooks.

Upon completion of the first list of words, the students will refer to a vocabulary tape to practice the newly developed outlines. A self-check is made after the student has mastered the 25 words. The self-check consists of (1) utilizing the new outlines, (2) the spelling of the words, and (3) typewritten transcription. A score of 100 percent must be attained to proceed on to the next 25 words. If a score of less than 100 percent is attained, the student is instructed to repeat the tape and retake the self-check.

After completing all vocabulary lists in the text, the student is instructed to take a final vocabulary evaluation. This evaluation will contain approximately one-third of the total vocabulary studied and will be administered by the instructor. At the discretion of the instructor, the student will then proceed with "speed building".

Speed building is practiced from tapes, which range in speeds from 120 to 140 WAM. After this speed range is achieved, the student may request a transcription evaluation. The transcription evaluation will be administered by the instructor and will consist of four one-minute letters which are dictated at

120 WAM, utilizing the terminology studied. The student is expected to transcribe these four letters in 20 minutes in mailable form. This evaluation may be repeated at the discretion of the instructor.

OUTCOME

The results of the individualized advanced shorthand terminology units which were developed are:

1. One student, who presently is completing The Trane Company terminology unit, has reported favorably on this learning method.
2. The terminology unit which has been developed for Bank and Financial Institutions has also been adapted to an advanced classroom situation.

47

INTRODUCTION

The purpose of the unit is to acquaint you with the vocabulary frequently used in banks and financial institutions. You will be working through exercises to devise shortcuts for these terms and will practice dictation utilizing them. Upon completion of the unit, you will be expected to score 100 percent on a vocabulary evaluation dictated at one word every three seconds and transcribe, in mailable form, four one-minute letters dictated at 120 wam. You will be allowed twenty minutes for transcription.

The material in the unit is presented in a sequential manner. For best results the sequence should be followed. Instructions are given before each section and self-checks occur after each section. You are expected to have 100 percent accuracy on each of these self-checks before proceeding to the next section.

Practice tapes are included with the unit. Tapes are provided for vocabulary practice and for speed building. After each section of the unit, you will be referred to a specific tape. For example, after you complete the Vocabulary List I, you will be referred to a tape that correlates with the vocabulary. Speed-building tapes range from 120 to 140 wam. You will only utilize these tapes after the entire vocabulary is mastered.

ALWAYS CONSULT WITH YOUR INSTRUCTOR IF A QUESTION ARISES.

You are now ready to begin. Turn the page.

REMEMBER

Your goal is to reach 100 percent accuracy on the vocabulary and take dictated material at 120 wam.

INSTRUCTIONS

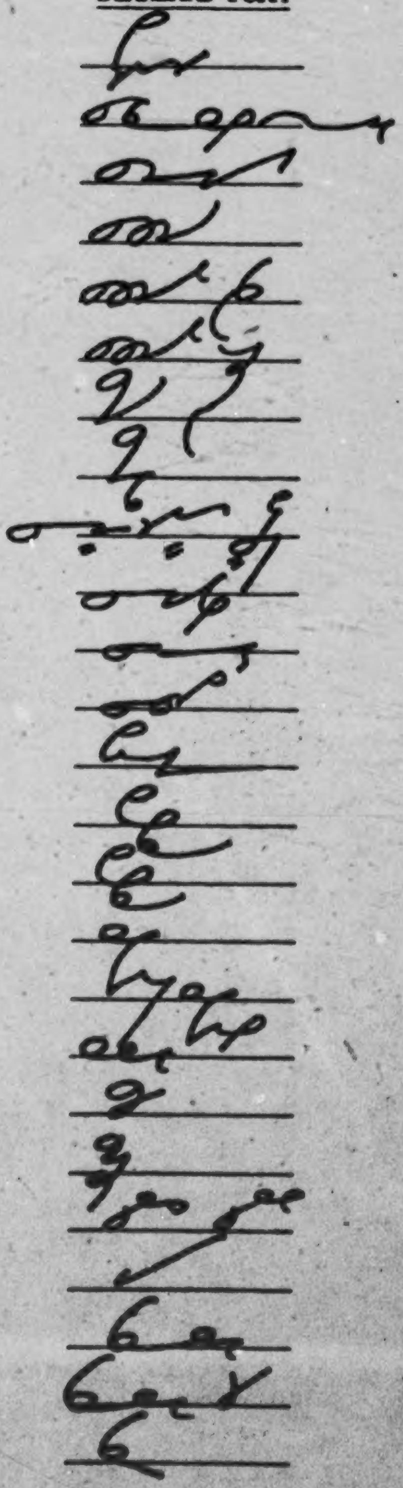
On the following page is a list of terms frequently used in a bank or financial institution. In each section a list of words will be presented. First the word will appear, followed by the standard shorthand outline, and then a blank line. For each outline presented decide for yourself whether the outline can be shortened without causing confusion during transcription. Some outlines may not lend themselves to shortcutting. When you have decided upon the outline that is the best for YOU, practice it several times in your shorthand notebook. DO NOT write in the booklet.

Practice the outline until you have it mastered. Turn the page and begin VOCABULARY LIST I.

REMEMBER

Work at your own pace and decide upon the outline that is best for you.

VOCABULARY LIST I



TERM	STANDARD FORM	PRACTICE
abstract		
acceleration clause		
accommodation		
account		
accounts payable		
accounts receivable		
agent		
agency		
American Stock Exchange		
amortization		
analysis		
annuity		
apportionment		
appraisal		
appraiser		
arbitrage		
arbitration		
arrears		
asset		
association		
attorney, attorneys		
audit		
balance		
balance sheet		
bank		

8

INSTRUCTIONS

When you have an outline with which you can work successfully for each of these twenty-five words, refer to TAPE 1A, Side 1 for vocabulary practice. On each of the practice vocabulary tapes, the words will first be presented in alphabetical order and spelled, then in alphabetical order again, and then in random fashion. Repeat the tape until you have mastered the list. NOTE You may find it beneficial to write the words a second time from the random order and transcribe them.

REMEMBER Spelling is always important.

ARE YOU READY?

If you feel you have these twenty-five words mastered, turn the page for the self-check. Good luck.

REMEMBER You may repeat the self-check after further practice if you do not score 100 percent the first time.

51

VOCABULARY LIST I SELF-CHECK

In your shorthand notebook, write the proper outline for the word indicated. Work completely through the list. After you have finished writing all the outlines for the words listed, transcribe them on a typewriter. When you have finished typing, refer back to the self-check to check your spelling and transcription.

1. abstract
2. accommodation
3. agent
4. American Stock Exchange
5. annuity
6. appraisal
7. arbitration
8. attorney, attorneys
9. balance sheet
10. bank

DID YOU SCORE 100 PERCENT??

If you did score 100 percent, then proceed to the next vocabulary list.

HOWEVER------

if you did not score 100 percent on this section of vocabulary, then refer back to the tape drill and practice until you are ready to try the self-check again. You may wish to consult with your instructor for further help.

REMEMBER

Repeat the same pattern for each of the vocabulary lists.

1. Devise your own shortcut
2. Practice the tapes
3. Take the self-check

CONGRATULATIONS!

You have now worked through the entire vocabulary list!!!

Upon completion of this exercise, you will be ready for the complete vocabulary evaluation. You now have the option of taking the evaluation immediately or working through the vocabulary tapes again before taking the evaluation.

THE DECISION IS YOURS!

HAVE YOU MADE YOUR DECISION?

Contact your instructor and he will administer the complete vocabulary evaluation. You may repeat the evaluation until you have 100 percent accuracy. Twenty-five percent of the words will be dictated by your instructor. You will transcribe them on a typewriter. Spelling is important and will be part of your grade.

GOOD LUCK!

54

YOU ARE NOW READY TO
BEGIN SPEED BUILDING

The speed building in the program consists of a number of dictation tapes that contain several letters or reports involving the typical vocabulary used in banks and financial institutions. The speed ranges from 120 - 140 wam. Begin with TAPE 3D, Sides 1 and 2. You will also find additional speed building material on TAPE 3E, Sides 1 and 2 and TAPE 3F, Sides 1 and 2.

85

YOU'RE ALMOST THERE!

At this point, you should be ready for the dictation-transcription evaluation. Your instructor will dictate four one-minute letters at 120 wam. Transcribe, in mailable form, as many of these letters as you can in twenty minutes.

You may repeat this evaluation if you do not master it the first time. Practice the speed building tapes once more, if you did not pass the evaluation.

TITLE: IMPLEMENTING D.E. LEARNING SYSTEMS. FINAL REPORT.

DESCRIPTOR: *DISTRIBUTIVE EDUCATION; *DISTRIBUTIVE EDUCATION TEACHERS; *PERFORMANCE BASED EDUCATION; *INDIVIDUALIZED INSTRUCTION; *INSERVICE TEACHER EDUCATION; TEACHER WORKSHOPS; SECONDARY EDUCATION; POST SECONDARY EDUCATION; INSTRUCTOR COORDINATORS

IDENTIFIER: *IOWA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 65P.

ABSTRACT: DESCRIBED IN THE 17-PAGE REPORT IS A PROJECT TO PROVIDE INSERVICE TRAINING TO IOWA DISTRIBUTIVE EDUCATION TEACHER-COORDINATORS TO EFFECTIVELY UTILIZE THE INTERSTATE DISTRIBUTIVE EDUCATION CURRICULUM CONSORTIUM MATERIALS, A SET OF 550 LEARNING ACTIVITY PACKAGES (L.A.P.). BASED ON RESULTS OF A NEEDS ASSESSMENT SURVEY TO IDENTIFY THE COMPETENCIES TEACHERS WANTED TO DEVELOP, AN EDUCATIONAL TASK FORCE PLANNED THE GOALS AND INSTRUCTIONAL STRATEGIES FOR A FIVE-DAY WORKSHOP. A TOTAL OF 114 TEACHERS AT HIGH SCHOOL OR POSTSECONDARY LEVELS PARTICIPATED IN ONE OF SIX WORKSHOPS CONDUCTED IN THE SPRING AND FALL OF 1974. THE WORKSHOP AGENDA, NEEDS ASSESSMENT AND EVALUATION INSTRUMENTS, AND LEARNING STRATEGIES DEVELOPED ARE INCLUDED IN THE DOCUMENT, ALONG WITH RECOMMENDATIONS FOR FURTHER STUDY. THE INSTRUCTIONAL MATERIALS DEVELOPED FOR THE WORKSHOP AS HANDOUTS TO AID IN IMPLEMENTING THE LEARNING SYSTEM ARE CONTAINED IN THE APPENDIX (47 PAGES). THESE INCLUDE: A LISTING OF CONCEPTS AND GENERALIZATIONS CONCERNING MARKETING AND ECONOMICS, GUIDELINES FOR ORIENTATION INTERVIEWS WITH PROSPECTIVE STUDENTS AND FOR TEACHER PREPLANNING, A DISTRIBUTIVE EDUCATION COMPETENCY CHART COMPILED FROM THE LUCY CRAWFORD CURRICULUM COMPETENCY STUDY, A LISTING OF COMPETENCIES TO BE USED WITH THE L.A.P., AN ARTICLE ON MANAGING LEARNING SYSTEMS, AND A CHECKLIST FOR SELF-EVALUATION. FINAL REPORT: IMPLEMENTING D.E. LEARNING SYSTEMS

EDUCATIONAL AGENCY: UNIVERSITY OF NORTHERN IOWA

ADDRESS: BUSINESS EDUCATION DEPARTMENT
UNIVERSITY OF NORTHERN IOWA
CEDAR FALLS, IOWA 50613

PROJECT DIRECTOR: ROGER DITZENBERGER

DURATION OF PROJECT: MAY 1, 1974 to JUNE 30, 1975
PHASE I: MAY 1, 1974 to JUNE 30, 1974
PHASE II: JULY 1, 1974 to JUNE 30, 1975

VT 102 812

OBJECTIVES OF THE PROJECT

The purpose of the project was to provide in-service training to Iowa vocational distributive education teacher-coordinators to utilize the Inter-State Distributive Education Curriculum Consortium materials. Specifically the project was initiated to:

1. Provide knowledge and understanding of the elements of the Inter-State Distributive Curriculum Consortium.
2. To orient the teacher-coordinators on how to use the D.E. consortium materials in their local D.E. program.
3. To provide each Iowa D.E. coordinator receiving the in-service education with a complete set of the 550 learning activity packages.

PROCEDURES FOLLOWED

IDENTIFICATION OF IN-SERVICE NEEDS

In order to identify the educational needs of Iowa teacher-coordinators to effectively use the I.D.E.C.C. materials, an educational task force was organized. The task force was asked to complete a needs assessment instrument (see pages 2&3) to identify the in-service needs of Iowa distributive education teacher-coordinators to effectively organize and implement the Inter-State Distributive Education Curriculum. After completing the needs assessment instrument, the task force members were asked to decide time allocations for each of the modules selected for the workshop (see pages 4&5 for planning form). Considerable time was spent in also identifying emphasis and major workshop goals.

NEEDS ASSESSMENT OF IOWA
D.E. COORDINATOR TO IMPLEMENT I.D.E.C.

Directions: Please check the appropriate column to determine competencies to develop during in-service workshops. When you have completed your survey, please go back through the items you checked in the MUST KNOW column and circle the items you feel are HIGH-priority workshop items.

MODULE	COMPETENCIES	MUST KNOW	SHOULD KNOW	HELPFUL	UNDECIDED
SECTION I. BASIC KNOWLEDGES AND UNDERSTANDINGS ABOUT I.D.E.C. SYSTEM					
1.	Where and why I.D.E.C. was developed.				
2.	What is a competency.				
3.	Elements or features of the I.D.E.C. system.				
4.	Purpose of the I.D.E.C. system.				
5.	Common misconceptions about I.D.E.C.				
6.	Benefits of I.D.E.C. system.				
7.	Lucy Crawford Study - I.D.E.C. - D.E. Program.				
8.	Breakdown chart of task analysis competencies.				
9.	What curriculum areas are in I.D.E.C.				
10.	What curriculum areas are not in I.D.E.C.				
11.	Importance of common competencies				
12.	Role of the "D.E. Learning Manager"				
13.	Introduction to the Inter-State D.E. Learning System.				
SECTION II. CURRICULUM PLANNING AND ORGANIZING IN YOUR PROGRAM					
14.	How to use the new computer print-out to plan and organize your curriculum.				
15.	How to organize your D.E. curriculum using the I.D.E.C. system.				
16	How to use competency-based training plans to improve your O.J.T. curriculum.				
17.	How to organize a filing system to house I.D.E.C.				
18.	Duplicating I.D.E.C. materials.				
19.	Supplies and equipment needed for I.D.E.C.				
20.	The Master Resource List				
21.	How to sell administrators on system.				
22.	How to organize sales training program				
23.	Importance of a balance of approaches to instruction.				
24.	Importance of studying L.A.P. material				

SECTION III. DIRECTING LEARNING ACTIVITIES IN YOUR D.E. PROGRAM

MODULE	COMPETENCIES	MUST KNOW	SHOULD KNOW	HELPFUL	UNDECIDED
25.	Explaining system to students				
26.	Career counseling of individual D.E. students.				
27.	Counseling D.E. students for individual growth.				
28.	What are the basic components of the L.A.P.				
29.	Uses of pre- and post-tests.				
30.	Competency areas unique to individualize instruction.				
31.	Behavioral objectives - how, & what to explain to students.				
32.	Sequence of the Learning Activity Package.				
33.	Ideas on when to use group or individual activities.				
34.	How to use learning activity page (options).				
35.	Explanation of self-contained individual instruction materials.				
36.	How to use Learning Manager's Guide page.				
37.	How to use Pre-test and Post-test key pages.				
38.	How student goes through L.A.P. individually.				
39.	Use of student competency record forms.				

WORKSHEET FOR
PLANNING SUMMER WORKSHOPS

Questions We Need To Discuss

1. What emphasis and time allocation should we give to:
    a. Basic knowledges and understandings about the I.D.E.C. System (Section 1).

    b. Curriculum Planning and Organizing in your D.E. Program (Section II).

    c. Directing Learning Activities in your D. E. Program (Section III).

2. What specific competencies should be developed?

3. What learning strategies should we use to develop each competency.

4. What should be included in the notebook?

MAJOR GOALS:

CONCEPTS	STRATEGIES - ACTIVITIES
MONDAY	
TUESDAY	
WEDNESDAY	
THURSDAY	
FRIDAY	

DEVELOPMENT OF INSTRUCTIONAL MATERIALS

Upon completion of the needs assessment instrument and workshop goal planning, planning time was spent in determining which instructional strategy would best develop the stated competencies. The form, Learning Strategies for D.E. Summer Workshop, provides a break down of the strategies to be developed for the workshop (see pages 7 & 8 for Learning Strategies form). All the instructional materials developed for the workshop are provided in Appendix A: Workshop Materials on pages ___.

WORKSHOPS TO DEVELOP D.E. LEARNING MANAGERS

A total of six workshops were conducted to fulfill the objectives of the project. Sixty-one of the sixty-five Iowa high school distributive education coordinators attended the three summer workshops. The summer workshops were conducted on:

Workshop I: June 3 - June 8, 1974, Ankeny
23 high school D.E. coordinators attended
5 post-secondary coordinators attended
2 multi-occupations coordinators attended

Workshop II: June 24 - June 29, 1974, Cedar Falls
15 high school coordinators attended
7 post-secondary coordinators
3 multi-occupations coordinators attended

Workshop III: July 29 - August 2, 1974
21 high school coordinators attended
4 post-secondary coordinators

Workshop IV: October 12 - October 19, 1974, Webster City
11 post-secondary coordinators attended

Workshop V: October 13 - October 20, 1974, Cedar Rapids
13 post-secondary coordinators attended

Workshop VI: October 15 - October 22, 1974, Ankeny
8 post-secondary coordinators attended
2 high school coordinators attended

The workshops were attended by a total of 114 teachers.

SUMMARY OF ACCOMPLISHMENTS

A primary purpose of the in-service program was to provide the teacher-coordinators with knowledge and understanding of the elements of the Inter-State Distributive Education Consortium. The agenda for the in-service training program was:

Day One

What is a Learning System
How and why was the Inter-State D.E. Curriculum developed
The purpose of a D.E. learning system
Common misconceptions about I.D.E.C.C.
Features and elements of I.D.E.C.C.
Benefits of I.D.E.C.C.
The role of the "D.E. Learning Manager"
L.A.P.'s . . . for those who hear a different drummer

Day Two

What curriculum areas are in I.D.E.C.C.
Steps to follow to implement I.D.E.C.C.
Career counseling of D.E. students
Counseling D.E. students for individual growth
Using the computer print-out to organize D.E. curriculum
How to organize your D.E. curriculum using I.D.E.C.C. materials

Day Three

Curriculum models for D.E. program instruction
Organizing a filing system to house I.D.E.C.C.
A look at the L.A.P.'s

Day Four

Sales Training--A model I.D.E.C.C. program
How to use a L.A.P.

Day Five

Review
Steps in implementing the I.D.E.C.C. Learning System
Curriculum Planning
Curriculum Organizing
Evaluating Student Progress

An evaluation instrument was developed to measure the teacher-coordinators attitude toward barriers to implementing the learning system. The questionnaire on pages 10 - 15 was completed by 63 Iowa distributive education teachers in August of 1975 and the results will be forwarded in a separate report to the Iowa Research Coordinating Unit.

I. BACKGROUND INFORMATION

1. Age ______________ 2. State ______________

3. Number of years experience in present distributive education teaching position. ______________

4. Were you involved in writing learning activity packages for the Inter-State Distributive Education Curriculum Consortium?
_____ Yes
_____ No

5. How many days in-service training have you received in a workshop or course specifically set up to provide information to use the Inter-State Distributive Education Curriculum (I.D.E.C.C.)?
_____ Number of days
_____ None

6. How many students are enrolled in your D.E. program? (If you are one teacher in a multi-teacher program, please count only the number of students you are responsible for in terms of providing classroom instruction, on-the-job training, and D.E.C.A.)
_____ Number of students

7. Have you received a set of the learning activity packages developed by the Inter-State Distributive Education Curriculum Consortium?
_____ Yes
_____ No

II. DISTRIBUTIVE EDUCATION CURRICULUM APPROACHES

Instructions:

The purpose of this section of the opinionnaire is to obtain some general information from distributive education teachers. We are interested in your personal opinion. There are no right or wrong responses, so do not hesitate to respond to each statement frankly. We have tried to cover many different and opposing points of view; you may find yourself strongly agreeing with some of the statements, disagreeing just as strongly with others, and perhaps uncertain about others. Whether you agree or disagree with any statement, you can be sure that many other people feel the same as you do. Please be sure you DO NOT OMIT ANY STATEMENT.

You are asked to respond by circling the appropriate letter, using the following code:

Strongly Agree	SA
Agree	A
Uncertain	U
Disagree	D
Strongly Disagree	SD

STRONGLY AGREE / AGREE / UNDECIDED / DISAGREE / STRONGLY DISAGREE

1. Teachers should conduct classes without assistance and discourage others from helping. SA A U D SD

2. I find that individualized instruction using behavioral objectives is valuable in helping the student succeed. SA A U D SD

3. I do not work well enough with others to make differentiated team teaching work. SA A U D SD

		STRONGLY AGREE	AGREE	UNDECIDED	DISAGREE	STRONGLY DISAGREE
4.	I think the use of behavioral objectives with individualized learning experiences should help students develop to their potential.	SA	A	U	D	SD
5.	Early occupational education may stimulate a better attitude toward school work in later years.	SA	A	U	D	SD
6.	Vocational education can do little to alleviate the problems of disadvantaged people.	SA	A	U	D	SD
7.	Use of differentiated team teaching would allow a more varied content in lessons.	SA	A	U	D	SD
8.	I think there's no harm in starting occupational preparation for young school children.	SA	A	U	D	SD
9.	I accept the idea that individualized instruction using behavioral objectives allows students to experience success more often.	SA	A	U	D	SD
10.	Schools can't do much to develop positive attitudes toward work.	SA	A	U	D	SD
11.	I'm convinced that differentiated team teaching is a waste of time.	SA	A	U	D	SD
12.	Vocational teachers can make a real contribution to occupational education at the elementary level.	SA	A	U	D	SD
13.	I would greatly dislike being a member of a differentiated teaching team.	SA	A	U	D	SD
14.	I believe it is more important to work with an entire class than to spend a lot of time with individuals.	SA	A	U	D	SD
15.	I believe that increased emphasis on adult vocational programs would eventually reduce inner-city unemployment.	SA	A	U	D	SD
16.	Students can benefit little from occupational education in the elementary grades.	SA	A	U	D	SD
17.	Teaching teams allow a teacher to spend more time developing creativity, responsibility, and habits of inquiry in students.	SA	A	U	D	SD
18.	I uphold the differentiated team teaching concept as permitting a natural exchange of ideas.	SA	A	U	D	SD
19.	We now have more vocational programs than we need for the disadvantaged.	SA	A	U	D	SD
20.	There is no need in the elementary curriculum for the addition of occupational education.	SA	A	U	D	SD
21.	I say that differentiated team teaching is asking too much of established teachers.	SA	A	U	D	SD

13

III. IMPLEMENTING AND USING THE INTER-STATE DISTRIBUTIVE EDUCATION CURRICULUM CONSORTIUM

Instructions:

The purpose of this section is to identify your feelings about using the Inter-State Distributive Education Curriculum Consortium project in your D.E. program. There are no wrong answers to each statement, so do not hesitate to respond to each statement frankly.

You are asked to respond by circling the appropriate letter, using the following code:

Strongly Agree	SA
Agree	A
Uncertain	U
Disagree	D
Strongly Disagree	SD

	STRONGLY AGREE	AGREE	UNDECIDED	DISAGREE	STRONGLY DISAGREE
1. The administration in my school has been philosophically supportive of the I.D.E.C.C. project.	SA	A	U	D	SD
2. Departmental approval has aided in implementing and using the I.D.E.C.C. project.	SA	A	U	D	SD
3. Administrative financial support for the following equipment has aided in implementing and using the I.D.E.C.C. learning system:					
a. Adequate file cabinets to house the materials.	SA	A	U	D	SD
b. Overhead projector to use transparencies.	SA	A	U	D	SD
c. Copying equipment to make copies of pages of the learning activity packages.	SA	A	U	D	SD
d. Audio-visual equipment needed to individualize instruction.	SA	A	U	D	SD
4. Administrative financial support for the following supplies has aided in implementing and using the I.D.E.C.C. learning system:					
a. File folders to house each learning activity package.	SA	A	U	D	SD
b. Thermofax or spirit duplicator masters to provide originals for multiple copies.	SA	A	U	D	SD
c. Copy paper to run multiple copies of learning package materials.	SA	A	U	D	SD
d. Transparency film to make transparencies for classroom use.	SA	A	U	D	SD
e. File tabs available from the Ohio State D.E. Materials Laboratory to identify each learning activity package file.	SA	A	U	D	SD
f. Extra divider pages available from the Ohio State D.E. Materials Laboratory	SA	A	U	D	SD

8. I do not feel confident in individualizing instruction in my D.E. program through the I.D.E.C.C. learning system. SA A U D SD

9. Time has been a barrier in setting up the files to house the I.D.E.C.C. learning system. SA A U D SD

10. I am not confident in my ability to counsel D.E. students on an individual basis to effectively use the I.D.E.C.C. learning activity packages. SA A U D SD

11. I believe in using more individualized instruction and less large group instruction to implement the I.D.E.C.C. learning system. SA A U D SD

12. The learning activity package format and the way the materials are sequenced is easy to understand. SA A U D SD

13. I believe that the most appropriate method of filing each learning activity package is to separate the student's materials from the teacher's materials. SA A U D SD

14. I do not understand how to use each section of the learning activity package. SA A U D SD

15. Lack of confidence in the learning activity package format (length and sequence) is a barrier in using the I.D.E.C.C. system. SA A U D SD

16. Lack of time to prepare for individualized instruction and/or small group instruction is a barrier to using the I.D.E.C.C. learning system in my D.E. program. SA A U D SD

17. I have received enough in-service training to adequately plan, implement, and use the I.D.E.C.C. learning system in my D.E. program. SA A U D SD

18. The facilities in my D.E. program are not adequate enough to implement the I.D.E.C.C. learning system. SA A U D SD

19. I am confident in my ability to provide career counseling for each D.E. student to identify career interests and goals in marketing and distribution. SA A U D SD

20. I am confident that I can explain the I.D.E.C.C. learning system to my school administrators to obtain their philosophical approval. SA A U D SD

21. I am confident that I can explain the I.D.E.C.C. learning system to my school administrators to obtain needed financial support. SA A U D SD

22. The lack of student's career objective is a major barrier to using the I.D.E.C.C. learning system. SA A U D SD

23. Student attitudes are a barrier to using the I.D.E.C.C. learning system. SA A U D SD

24. The limited experience of students in learning through individualized instruction is a barrier to using the I.D.E.C.C. system. SA A U D SD

25. Clerical duties (copying, preparing materials, record keeping, etc.) are a barrier to using the I.D.E.C.C. system. SA A U D SD

NB NO BARRIER
B MINOR BARRIER
MB MAJOR BARRIER

ITEMS
1. Availability of resource materials _____
2. Adequate filing system _____
3. In-service education _____
4. Adequate copying supplies _____
5. Confidence in materials in L.A.P.'s _____
6. Administrative support _____
7. Planning time _____
8. Student motivation _____
9. Problem in identifying career objectives of students _____
10. Knowledge of contents of the learning activity packages _____
11. Others (please list) _____

47. Have you filed the learning activity packages (please check one)
_____ Have filed all the L.A.P.s
_____ Have filed about 75% of the L.A.P.s
_____ Have filed about 50% of the L.A.P.s
_____ Have filed about 25% of the L.A.P.s
_____ Have filed one or two subject-matter sections of the L.A.P.s
_____ Have not filed any of the L.A.P.s

48. Please read all of the following statements about the Inter-State Distributive Education Curriculum (I.D.E.C.C.) learning system very carefully before you respond. THEN CHECK THE ONE STATEMENT WHICH BEST REFLECTS YOUR ATTITUDE TOWARD I.D.E.C.C.
_____ I am aware of the Inter-State Distributive Education Curriculum Learning system.
_____ I am interested in learning more about I.D.E.C.C.
_____ I am not interested in learning more about I.D.E.C.C.
_____ I am interested in attempting to implement I.D.E.C.C. in my D.E. program.
_____ I have used a part of the I.D.E.C.C. system and plan to continue its use.
_____ I have used a part of the I.D.E.C.C. system, and I was unhappy with the results and plan to use a different approach than I.D.E.C.C.
_____ I plan to organize more of my curriculum and instruction using the I.D.E.C.C. materials.
_____ I plan to pre-plan my curriculum and instruction next fall using the I.D.E.C.C. learning system and its materials as a base for my D.E. program.
_____ I believe strongly enough in the I.D.E.C.C. to try to convince other teacher-coordinators to use the learning system.
_____ I plan to use the I.D.E.C.C. learning system CONSISTENTLY as a foundation for my D.E. program.
_____ I include the utilization of the I.D.E.C.C. learning system when expressing my philosophy of program operation and believe very strongly in its value for my D.E. program.

RECOMMENDATIONS

1. The State Department of Public Instruction sponsors a continued program to:
    a. Research comparisons between traditional and systems approach to instruction.
    b. Study the value of learning systems curriculum development projects in other vocational disciplines.
    c. Provide additional upgrading and retraining of teachers in the implementation and use of innovative curriculum projects.
2. The State Department of Public Instruction in cooperation with teacher training institutions continue its membership in the Inter-State Distributive Education Curriculum Consortium.
3. An interdisciplinary task force be formed to study the implications of the use of the Inter-State Distributive Education Curriculum Consortium materials in other vocational disciplines.

APPENDIX

CONCEPTS AND GENERALIZATIONS CONCERNING MARKETING AND ECONOMICS

Definitions:

1. Advertising-Any paid form of non-personal presentation and promotion of ideas, good or services by an identified sponsor. (1)

2. Chain Store-A group of retail stores of essentially the same type, centrally owned and with some degree of centralized control of operation. (1)

3. Consumers' Goods-Goods destined for use by the ultimate household consumer and in such form that they can be used by him without further commercial processing. (1)

4. Convenience Goods-Those consumers' goods which the customer usually purchases frequently, immediately and with the minimum of effort. (1)

5. Department Store-A retail store which handles a wide variety of lines of goods, such as women's ready-to-wear and accessories, men's and boys' wear, piece goods, small wares and house furnishings, and which is organized into separate departments for purposes of promotion, service and control.

6. Distribution-The term Distribution is synonymous with the term, Marketing. (1) See Marketing.

7. Industrial Goods-Goods which are destined for use in producing other goods or rendering services as contrasted with goods destined to be sold to the ultimate consumer. (1)

8. Market-(1) An aggregate composed of a prospective buyer (or buyers), and a seller (or sellers), that brings to focus the conditions and forces which determine prices. (2) The aggregate demand of the potential buyers of a commodity or service. (3) The place or area in which buyers and sellers function. (4) (as a verb) To Perform business activities which direct the flow of goods and services from producer to consumer or user. (1)

9. Marketing- The performance of business activities that direct the flow of goods and services from producer to consumer or user. (1)

10. Merchandising- The planning involved in marketing the right merchandise or service at the right place, at the right time, in the right quantities and at the right price. (1)

11. Merchandising Control - The collection and analysis of statistical data of sales, stocks and pricing practices as a guide to the profitable purchase and sale of merchandise (1)

12. National Brand-A manufacturer's or producer's brand usually enjoying wide territorial distribution. (1)

13. Net Profit-Net Gain-Net Income-Final income available for proprietary accounts (either before or after deduction of Federal and State Income Taxes as specifically indicated). It includes operating profit together with net other income. (1)

14. Operating Profit (For purposes of marketing)-Gross margin (gross profit) less operating expenses. (1)

15. Private Brands-Brands sponsored by merchants or agents as distinguished from those sponsored by manufacturers or producers. (1)

16. Retailer-A merchant or business establishment that sells mainly to the ultimate consumer. (1)

17. Retailing-The activities incident to selling to the ultimate consumer. (1)

18. Services-Activities or anticipated satisfactions which are offered for sale either as such or in connection with the sale of goods. (1)

19. Shopping Goods-Those consumers' goods which the customer in the process of selection and purchase characteristically compares on such bases as suitability, quality, price, and style. (1)

20. Specialty Store-Those consumers' goods on which a significant group of buyers characteristically insists and for which they are willing to make a special purchasing effort. (1)

21. Specialty Store-A retail store that makes its appeal on the basis of a restricted class of shopping goods. (1)

22. Ultimate Consumer-One who buys and/or uses goods or services to satisfy personal or household wants rather than for resale or use in business, institutional, or industrial operations. (1)

23. Variety Store-A retail store that handles a wide assortment of goods usually of a low or limited price. (1)

24. Wholesaler-A merchant middleman who sells to retailers and other merchants and/or to industrial, institutional and commercial users but who does not sell in significant amounts to ultimate consumers. (1)

25. Economic System-The nature of economic life as a whole, proposed or actual, with particular reference to the ownership and use of property and the extent of government regulation and controls. (3)

26. Competition-The condition that exists in a market when there are an indeterminate number of traders all dealing in the same product and when no one dealer can demand or offer a quality sufficiently large materially to affect the market place. (3)

27. Free Enterprise System-An economic system characterized by private ownership and initiative. Basic to a free enterprise, or capitalist, system is the concept of private property, the right of ownership and the base of wealth to earn income. (2)

28. Monopoly-A market structure with only one seller of a commodity. In pure monopoly, the single seller exercises absolute control over the market price at which he sells, since there is no competitive supply of goods on the market. (2)

29. Oligopoly-The condition that exists when there are so few sellers that the supply offered by any of them materially affects the market price. (3)

30. Capitalism-An economic system based primarily on private or corporation ownership of capital goods where investments are determined by private decision rather than government control, and where prices, production and distribution are determined mainly in the market. Term is synonomous with free enterprise system. (2)

31. Socialism-Involves the state ownership of natural resources and the means of production in basic industries. (11)

32. Communism-In pure form, involves the state ownership of both producers and consumers goods. (11)

33. Corporation-A voluntary organization of persons, either actual individuals or legal entities, legally bound together to form a business enterprise. (2)

34. Partnership-A type of business organization in which two or more persons agree on their contribution (capital and effort) and on the distribution of profits, if any. (2)

35. Cooperative-A voluntary organization engaged in an economic activity which is established, owned and operated by those persons who together will share the total benefit. (2)

36. Individual Proprietorship-A form of business organization in which one individual owns and manages, assumes all the risks of, and derives all the profits from an enterprise. (3)

Goals:

1. The goal of our economic system is a freely competitive pricing process that will permit the distribution of the greatest amount of goods and services produced and sold at lowest cost and lowest price. (6)

2. The major goals of the Western economic system are (1) individual freedom, (2) economic stability, (3) economic security, (4) economic growth, and (5) economic justice. (4)

3. The following economic freedoms are assured to us by our capitalistic system: (1) freedom of enterprise, (2) freedom of vocational choice, (3) freedom of competition, and (4) freedom to own property. (5)

4. The true goal of the American way of life is the creating of a self-disciplined, well-educated and spiritually oriented people. (10)

5. The American capitalistic system is the best possible socioeconomic system and the only one that can make the mass production distribution system work for the benefit of all. (10)

6. Our country maintains the highest standard of living the world has ever known. (6)

7. A mass distribution system requires people to run it who have grown up under a regime that teaches personal responsibility and self-discipline, qualities that can be acquired only in an atmosphere of freedom. (10)

8. A country's economic system must be adapted to national goals.

9. Business has a civic, social and moral responsibility to society.

Economic Resources:

1. The economic resources of a country are land, labor, capital, and entrepreneurship. (6)

2. An entrepreneur is the man (or group of men) who organizes the use of the land, labor and capital for production purposes. (6)

3. Research and development has been a motivating force in the United States and has been beneficial not only to the industries directly concerned but to our entire economy. (6)

Economic Problems:

1. All economic systems (capitalists, communists or any other) face the same economic problems; different economic systems solve their problems differently. (11)

2. No economic system exists which is completely free or completely controlled.

3. Basic economic problems: insatiable wants of individuals; limited supply of resources to fill wants and needs. (4)

The Market as the Focus of the American Economy:

1. Market conditions determine what and how much will be produced and what will be consumed. (4)

2. Markets are made up of people: buyers, sellers and facilitating agents. (4)

3. All business depends on retail trading a decline in retail sales means fewer sales for the wholesalers, and this in turn means fewer sales for the producer. (8)

4. Marketing functions are: (1) selling and advertising, (2) buying or assembling, (3) financing, (4) transporting, (5) storing, (6) risk bearing and (7) standardizing and grading. (4)

Influence on Prices:

1. Prices usually vary directly with demand; prices vary inversely with supply.

2. Influences on demand include such factors as (1) usefulness, (2) standard of living, (3) advertising, (4) salesmanship and (5) custom and traditions.

3. Supply is influenced by such factors as (1) cost of production; (2) government price ceilings; (3) competition; (4) labor disturbances; and (5) uncontrollable factors, such as floods, famine, war.

4. Factors such as volume of goods produced, volume of sales, development of new production and distribution procedures tend to reduce prices. (5)

The Role of the Individual:

1. The free choice of occupation and opportunity for advancement are inherent in the American free enterprise system. (5)

2. The individual, whether he works alone or whether he works on a team, is the most important asset in our American economy. (14)

3. A knowledge of economic realities is a requisite for a capable worker, salesman, manager, consumer and voter. (15)

4. Economic decisions will be conditioned by the social philosophy and economic convictions of the individual. (15)

5. The survival of human freedom rests upon the ability of the American people to understand, value and protect the basic principles of freedom and personal initiative upon which our society is founded. (15)

6. Salable skills are crucially needed in a dynamic economy. (4)

Role of Government:

1. Government regulations in the field of marketing have two major objectives: (1) to maintain competition and (2) to regulate economic activities affecting the public welfare. (4)

2. A series of antitrust laws have been enacted by Congress to outlaw monopoly. (8)

Role of Consumer:

1. Unless the ultimate consumer has the desire and money to consume commodities, they will not be consumed either industrially or privately. (5)

2. "The costomer is king" in that his needs, wants, and preferences dictate what goods and services business will produce and what services his government will supply. (14)

3. Well educated consumers are of vital improtance to economic growth. (14)

4. It is the demands of individual consumers, coupled with the desire of businessmen to maximize profits and the desire of individuals to maximize their incomes which together determine what shall be produced and how resources are used to produced it. (11)

5. In a basically private enterprise economy, consumers' money demands largely determine what is produced. (11)

6. Private business and government agencies have exerted influence regarding the protection of the consumer. (5)

The Role of Profits:

1. Profits contribute to the advancement and growth of a business and to society.

2. The desire of a firm to make profits usually leads to efficient use of resources in production.

3. The profit incentive is the driving force of our American capitalistic economy.

4. The profit motive, operating under competitive pressures, largely determines how goods are produced. (11)

Role of Competition:

1. Competition encourages business to promote the search for new and efficient ways of doing things.

2. Competition is good in that: (1) it improves quality and reduces consumer prices, (2) prevents the producer from taking unfair advantage of the worker, (3) results in progress from improved techniques of production and distribution, (4) raises living standards. (4)

International Trade:

1. Our trade in goods and services with other countries includes: merchandise transactions, military transactions, and transactions in such services as (1) travel, (2) transportation, (3) miscellaneous services and (4) income on investments. (16)

2. The purposes of tariffs include: Protecting new industries, providing economic self-sufficiency in time of war, protecting jobs and wages of domestic workers, providing a source of government revenue, promoting trade with particular countries through reciprocal trade agreements which reduce or eliminate tariffs. (4)

3. Our foreign transactions include: trade in goods and services, private capital investments, remittances and pensions, and U.S. government grants and capital transactions. (16)

Labor-Management Relationship:

1. Labor productivity is the foundation for high American wages and generally for the high American standard of living. (11)

2. Labor productivity includes not only the efforts of labor, but equally the efforts of management and the contributions of natural resources and man-made capital. (11)

3. Job security for the worker depends upon profitable operation. (15)

4. Technological improvements may require some workers to learn new skills and to move to other industrial centers. (19)

5. The Gross National Product (GNP) is the primary yardstick of our economy since it measures the total production of both public and private output in the United States. (14)

6. Good labor-management relationships are vital to a dynamic economy.

Hoving's Thirteen Principles of Distribution:
(10)

1. That the man who makes the product must be one of its major consumers.
2. That unless a worker is paid a wage that rises steadily, there can be no steady rise in the distribution pattern.
3. That the one-price principle is an improtant key element in moving goods through the pipeline of distribution into the consumer's hands.
4. That one of the great strengths of the American economy lies in the principle of compulsory competition.
5. That a free but competitive press undergirds the American economic system.
6. That advertising is one of the strongest forces creating prosperity in the United States.
7. That fashion is one of the most powerful economic elements in the distribution cycle.
8. That mass distribution is dependent on the wide use of the bank check.
9. That consumer credit is essential to the mass distribution of goods.
10. That provision for consumer services is essential to the sale of such items as automobiles, washing machines, lawn mowers and television sets.
11. That mass distribution is dependent upon mass transportation that is rapid and efficient.
12. That salesmanship is one of the most improtant elements in mass distribution.
13. That all types of work in distribution are on as high a level as any of the other occupations.

Initial D.E. Orientation Interview

Purpose: To communicate initially with the prospective D.E. student, to explain the D.E. program, and to set a course of action based on the response of the student during the interview.

I. Communicate with the D.E. Student

  A. Meet the student

    1. Get name correct
    2. Check grade level

  B. Put the student at ease
  C. Secure general information

    1. Educational background
    2. Personal background

  D. Develop a positive rapport

II. Explain the D.E. program

  A. Secure student opinion
  B. Explain Distributive Education

    1. Class
    2. Job
    3. Club

  C. Secure Student Reaction

    1. Question about D.E.
    2. Do they see themselves as a D.E. student

III. Moving into D.E.

  A. Look at students career goals

    1. Broad career area
    2. Move to a specific area if possible
    3. Give career question to think and discuss

  B. Give student a D.E. booklet

    1. For student information
    2. To discuss with parents

  C. Give student D.E. application

    1. To secure needed information
    2. To be completed prior to next interview

  D. Finalize plans

    1. Answer student questions
    2. Give career choice question for the student to think about
    3. Arrange a time for next interview

SEQUENCE OF INSTRUCTION

COMPETENCIES FOR ORIENTATION UNIT

I. A general knowledge of what the term D.E. is

II. Demonstrate an understanding of the three phases of the D.E. Program.

III. A general knowledge of classroom procedures

IV. An awareness of the various areas to be covered in classroom instruction

V. An awareness of the differences between group and individual

VI. Develop an understanding of the responsibilities of the student in an OJT situation

VII. Develop an understanding of the various forms to be used in the OJT situation

VIII. An awareness of student placement procedures

IX. Develop a knowledge of the training regulations for the program

X. Develop an attitude that the program is to be cooperative between employer, parent, student, and coordinator

XI. The ability to define the term DECA

XII. Demonstrate an understanding of items found in the DECA emblem

XIII. A knowledge of the DECA by-line

XIV. A knowledge of the duties of each of the DECA officers

XV. A general understanding of upcoming DECA activities on the local level

XVI. A knowledge of activities found at the Delegate Assembly, area conference, and state leadership conference

XVII. Develop an attitude that there are certain advantages and disadvantages associated with the D.E. Program

XVIII. Develop a skill to explain D.E. to parents, employers, friends, and managers

XIX. Develop an attitude that D.E. is not an end in itself as far as education is concerned

XX. Develop an attitude that the D.E. student is a representative of the school.

D.E. Career Planning Interview

Purpose: To utilize the information secured during the initial D.E. interview in developing specific career area of study for the student, as well or to help solve any initial problems the student may have in enrolling in the D.E. Program.

I. Re-establish Communication with the student

- A. Put the student at ease
- B. Summerize and review the previous interview
- C. Discuss questions the student has
- D. Discuss questions you asked the student to think about

II. Career Direction

- A. Looking to a career field
  - 1. Review broad career area
  - 2. Become specific if possible
  - 3. Relate career choices to specific jobs
  - 4. Have student plan for future
- B. Relate student wants and needs to the D.E. program
- C. Develop a direction for D.E. classroom study
- D. Develop a direction for D.E. OJT training station

III. Enrolling in D.E.

- A. Look at problems
- B. Evaluate student attitude
- C. Help student with schedule
- D. Look to potenial conflicts
- E. Answer student questions
- F. Finalize plans for next communication

D.E. STUDENT COUNSELING PLANNING FORM

PERSONAL DATA

Name of student ______________________________ Date of session __________

Training station ______________________________ Training sponsor __________

Activities and interests of student ______________________________

____

____

____

COUNSELING PROBLEM

What is the problem? Make sure you are working on the real problem. What do you hope to modify? (ATTITUDE, PERFORMANCE, UNDERSTANDING)

____

____

____

____

OBJECTIVES OF THE COUNSELING INTERVIEW

What do you want to accomplish during the counseling interview? (Please list specific objectives) Will you need more than one session to achieve the objectives?

1. ______________________________

____

2. ______________________________

____

3. ______________________________

____

Do you have facts and information needed to conduct an effective counseling interview? (Please list pertinent facts.)

____

____

____

TIMING THE INTERVIEW

How long should the interview take: ____minutes. Have you planned the interview and made arrangements so you will not be interrupted? Is there anything you want the student to do to prepare for the interview?

OPENING THE INTERVIEW

What will you do or say to put the student at ease?

What favorable comments can you make to the student to begin the counseling interview? (All students have more good than bad in them; more right than wrong, more things deserving praise than criticism.)

What will you say, do, or ask to begin the main topic of the counseling interview?

DETERMINING A COURSE OF ACTION

What QUESTIONS will you ask to:
Assist the student to identify the real problem?

Assist the student to determine alternate solutions to the problem?

____

____

____

____

____

____

ACTION

What procedures have you agreed upon to modify the student's performance or behavior? Have you agreed upon an action or goal which the student can achieve?

____

____

____

____

____

____

CLOSING REMARKS

Summarize the session: the problem, what has been agreed upon, and the action to be followed.

____

____

____

____

What comments or remarks will you use to end the counseling session in a favorable manner?

U.N.I. 3/1/73

GUIDELINES FOR FILING SYSTEMS TASK FORCE

Purpose: To develop a filing system to house the learning materials you will receive from the Inter-State Distributive Education Curriculum Consortium. The filing system should provide:

- a. Easy access to the learning materials which the student will use to develop a competency.
- b. Well-organized filing system which is easy to use and limits the loss of materials through misplacement or theft.
- c. Necessary security of permanent and confidential materials.

Suggestions in Preparing Your Final Draft:

Consider these questions on location and use:

1. Does student have complete access to both pre- and post-test and should he?
2. Should there be one master copy filed somewhere permanently by function, such as:
    - a. Learning Manager Material by L.A.P., competency, or objective
    - b. Student learning activity package by L.A.P., competency, or objective (L.A.P. will be sequenced by objective.)
3. What will the coordinator need to duplicate in quantity?
    - a. Pre-test--master file with student pack and also multiple copies in a pre-test file
    - b. Learning activity page for students (by objective)
    - c. Forms, handouts, and other self-contained learning materials for students
4. Where does Learning Manager's Guide go?
5. Where do we file:
    - a. Pre-test key
    - b. Post-test
    - c. Post-test key
6. Handouts, forms, and transparencies used by Learning Manager for group instruction
7. Where do we file student package parts?
    - a. Pre-test
    - b. Learning activities
    - c. Handouts

Include any other items in your report you feel are important.

Completing Computer Input Forms

in Distributive Education

You are a teacher-coordinator of the distributive education program at Cedar Falls Senior High School with 21 students in your program.

It is the second week of classes and all but two of your students have been placed at training stations in Cedar Falls.

Sheilah Goler is working in the women's department at Montgomery Wards and hopes to be a fashion designer of women's clothes. Her friend, Ramona Learn, is a waitress at Ward's Cafeteria and would like to work in the home furnishings department of the store if a position opens.

Eagles hired two of your students. Stephen Perry, an A student, will start in the produce department and will be shifted throughout the store if he shows the capability of learning quickly. Dave Cunningham is sacking groceries and stocking shelves. His father owns a small grocery store, and Dave has indicated an interest in going to the local community college to enroll in the Food Marketing Management Program.

Cindy Eden is planning to go to college and is working at Nelson Sewing Center. She enjoys sewing and helps customers select correct patterns and appropriate material.

Hallmark Gifts hired Becky Young, who has done average in school, but worked there since school was out last spring and received excellent evaluations. Her plans for next year are indefinite.

Sharon Corcoran and Cheryl Ross are clerks at K-Mart. Both are somewhat indefinite about next year although Cheryl is considering going to a community college and enroll in the fashion merchandising program.

Brian Williams works in the parts department of Johnson Chevrolet and sells parts to customers and distributes those requested by the employees. Mr. Johnson has agreed to show him the inventory procedure and possibly do the ordering. If all goes well, Mr. Johnson is hoping that the DE student will remain full-time at the end of the year. Brian is thinking of enrolling in the retail merchandising program at the community college but could work part-time at Johnson's while attending school.

Mays Drug agreed to work with your program this year. Deb Miller is working as a checker and is engaged. Ken Swanson is helping assemble some toys for Christmas now, stocking shelves, and will do more clerking beginning in a few weeks. Ken is indefinite about next year.

Rita Oronzco is one of your top academic students; she is president of DECA and hopes to run for a state office. She wants to be a buyer and will receive some good training this year at Seiferts. Kate Evans is also working at Seiferts and hopes to work full-time at Seiferts or another women's store upon graduation.

Bill Lemay is employed at Kinney's. His plans are indefinite for next year, but he is a good student. You visited with the manager about the management training program that Kinney's offers.

Don Paulsen and Craig Holmes are employed at gas stations. Don works for Phillips 66 and wants to manage his own someday. Craig is indefinite about his future but worked for Pester Derby since he was a sophomore and is working there again this year.

Bob Shirk was recently employed by Palace Clothiers and plans to attend college next year.

Jack Winter has worked at a bakery for the last two summers and is working in the bakery section of the Super Valu. Jeff Nash is also working at the Super Valu as a checker, sacker, and stock boy. His plans for next year are to enlist in the navy.

Louise Wilson is a below average student but is doing well at Mark's House-O-Plenty. She is working in the kitchen doing dishes, making salads, and doing general cleaning. She is extremely shy, but is hoped that she can work on tables later in the quarter.

Brad Morgan and Barb Hicks are not placed as yet. Brad decided over the summer that he was interested in the DE program, and you are giving him some review before beginning his employment. He enjoys sports and has interviewed at a sporting good store. Barb enjoys music and has interviewed at Musicland and at Walden Bookstore. You expect to hear next week of the results.

Using the information given about your students, complete the computer input form provided.

Planning D.E. Curriculum for Developing Math Competencies

Directions: The purpose of this activity is to pre-plan the competencies and learning activities for the math competencies. Because of the limited amount of time in the high school D.E. program to develop competencies, teachers need to carefully plan and organize their classroom instruction and on-the-job training. Many of the math competencies are needed as prerequisites to obtaining a marketing or retailing position.

Classroom Instruction

Step I: Determine the curriculum competencies you feel are important in developing knowledge, attitudes, and skills in math. Please check each competency you feel should be developed in math through classroom instruction.

Competency Area: Mathematics

_____ Skill in adding columns of figures with facility. (Lap 1,*358)

_____ Skill in multiplying and extending figures with facility. (Lap 2,*357)

_____ Knowledge of mathematical manipulations up to and including first degree algebraic expressions. (Lap 3, *353)

_____ Knowledge of how to maintain proper records of cash received and bank deposits to prevent losses. (Lap 4, *355)

_____ Ability to determine the price of merchandise being purchased in a lesser quantity than that originally multiple priced. (Lap 5, *384)

_____ Skill in using and translating percentages with facility. (Lap 6,*377)

_____ Skill in computing postal and mail charges for delivery of merchandise to customers. (Lap 7, *359)

_____ Skill in quickly determining the correct amount of trading stamps to issue with a customer's purchase. (Lap 8, *382)

_____ Ability to calculate the reimbursable amount for returned bottles. (Lap 9, *387)

_____ Skill in accurately calculating the exact amount of a customer's purchase. (Lap 10, 374)

_____ Attitude that carefully calculating the exact amount of a customer's purchase will prevent inventory shortages. (Lap 10,390)

_____ Skill in explaining time-payment principles. (Lap 11,*383)

_____ Skill in accurately computing employee discounts, delivery charges, alteration charges, lay-a-way charges, etc. when writing out sales checks. (Lap 12,*363)

_____ Skill in making change and using the cash register. (Lap 13, 371)

_____ Ability to make change quickly and accurately. (Lap 13, *386)

_____ Skill in preparing cash drawers for check-out registers allowing quantities of change and bills needed for various traffic periods. (Lap 14, *388)

_____ Attitude that careful use of the cash register will reduce inventory and money shortages. (Lap 15, 394)

_____ Knowledge of how to determine a cash register error, the amount and how to correct it on the proper form. (Lap 15,*354)

_____ Ability to balance cash drawers against register readings. (Lap 16, *389)

_____ Skill in balancing cash and totaling sales for the department and/or cash register at the end of the day. (Lap 17, *361)

_____ Skill in reading and interpreting self computing scales that speed up mathematical procedures such as tax computation charts. (Lap 18, 360)

_____ Skill in computing local, state and federal taxes which must be applied in the sale of goods. (Lap 18, *362)

_____ Skill in analyzing charts and graphs and interpreting the data. (Lap 19, *367)

_____ Skill in selecting and analyzing pertinent factors from a statistical or written report. (Lap 20, *372)

_____ Understanding that a retail business firm's operating expenses include such expenses as payroll, buying expenses, promotional expenses, utilities, transportation, supplies and delivery. (Lap 21, *348)

_____ Knowledge of break-even points by departments. (Lap 22, *356)

_____ Attitude that retail prices must be carefully placed on goods and services so as to cover the cost of operation and yield a profit. (Lap 23, *392)

_____ Knowledge of how to adjust pricing errors on merchandise price tickets and to record such errors in markdown or markup records. (Lap 24, *347)

_____ Skill in quickly figuring into which retail price line an item of merchandise will fall when quoted its cost price. (Lap 25, *370)

_____ Ability to maintain mathematically correct stock control records. (Lap 35, 379)

_____ Skill in keeping stock control books--posting prices, styles, codes, sales, markdowns, merchandise returns, etc. (Lap 35, *368)

_____ Skill in figuring "open to buy" in an effort to determine a department or store's overbought condition or money available for additional merchandise purchases within a planned period. (Lap 36, 369)

_____ Attitude that "open to buy" is a guideline useful in merchandising a department profitably. (Lap 36, *391)

_____ Knowledge of how to read and interpret a profit and loss statement. (Lap 37, *352)

_____ Understanding that a department's gross margin should cover operating expenses and provide a percentage of profit. (Lap 38,*350)

_____ Understanding that a department's net sales are derived by subtracting customer returns and authorized price reductions form gross sales. (Lap 39, *349)

_____ Knowledge of the procedures and factors involved in the retail and/or cost method of inventory. (Lap 40, 351)

_____ Skill in deriving the dollar figures for various factors in the retail and/or cost method of inventory. (Lap 40, *381)

Step II: List the competencies you feel should be developed in math through classroom instruction (group or individual). Then by reveiwing the materials in each LAP decide whether the competency can be developed through group or individual instruction.

MANAGING D.E. LEARNING SYSTEMS

Many professional journal articles and educational conferences are devoted to innovation and change in education. Distributive education coordinators are often asked to utilize innovating curriculum and instruction techniques in operating their programs. It is not uncommon for Career Education Divisions of state departments of public instruction and school administrators to request that local D.E. coordinators state their program goals and objectives in behavioral terms. Teacher education programs are advocating the use of competency-based curriculum studies in planning high school and post-secondary distributive education curriculum. Coordinators, in turn, are writing behavioral objectives for state reports or listing competencies which their students should develop to prepare for a career in distribution and then filing their work in a drawer with little change being made, in most cases, to classroom instruction. Why shouldn't they? Have they been provided with the pre-service or in-service education needed to understand the relationship between competencies, behavioral objectives, and learning activities? Do they know how to use competencies and behavioral objectives in developing meaningful learning activities? Much has been written about competencies, behavioral objectives, pre-tests and post-tests, learning activity packages, and using media in the classroom, but little has been done to provide coordinators with the information and skill to combine these educational innovations into developing and managing a learning system to improve the curriculum and instruction in their D.E. programs. The purpose of this article is to provide distributive education teacher-coordinators information on: The steps in developing and managing a learning system, the functions and decisions which should be performed by a D.E. learning manager, a comparison of a learning manager approach to a traditional teaching approach, and a project which is being developed to provide a learning system for D.E. coordinators.

Developing and Managing a Learning System

To develop and manage an effective learning system for his D.E. program, the coordinator needs to spend considerable time on his curriculum and instruction, the two major elements of any learning system. In developing the curriculum and instruction the coordinator must make two basic decisions. First, he must decide the objectives of the system, and second, he must decide on the instructional strategies or methods to accomplish the objective. Distributive education teacher-coordinators are dynamic, conscientious teachers and have believed in individualizing instruction for many years. The typical coordinator is constantly looking for ways to improve their classroom instruction. Managing a learning system for a D.E. program, however, involves more than effective classroom instruction, on-the-job training, or DECA. This is not to imply that any of these program elements are not important. The point is that, in addition to answering questions on how to teach, the coordinator must first carefully consider what he should teach. This process is often taken too lightly by the typical D.E. teacher-coordinator. An effective D.E. coordinator must carefully plan his curriculum(program goals and objectives) and also teach or direct the learning activities which will fulfill these goals. The teacher-coordinator, therefore, should be considered more than a teacher, he should be considered a "Manager of the Learning Process". As a learning manager, the teacher-coordinator must be able to perform many of the same functions as any manager. To develop and manage a learning system for a D.E. program the coordinator, as a learning manager, must be able to plan, develop, organize, direct, evaluate, and revise the curriculum and instruction for his students. Effective learning managers are required to make many critical decisions. The rationalities for these decisions should be well-thought through and based on the best available research, innovative projects, studies, and program practices. The following section identifies the steps in developing and managing a D.E. learning system, the functions which should be performed by a D.E. learning manager, and the decisions the learning manager makes in developing and managing the learning system.

STEP I: D.E. PROGRAM PLANNING

Plan program purposes and objectives. Decide curriculum competencies to be developed based on students' career goals.

Learning Managers Role in Planning Curriculum

1. Learning Manager studies sources of curriculum:
   - a. Student career goals and interests
   - b. Curriculum competencies needed for gainful employment:
     1. Lucy Crawford Competency Study
     2. John Carmichael Mid-Management Study.
   - c. "A Position Paper on Distributive Education" by American Vocational Association
   - d. Local task analysis
   - e. State and local curriculum guides
2. Learning Manager lists competencies to be developed by students
3. Add other concepts or goals

STEP II: D.E. CURRICULUM DEVELOPMENT

Write the general and specific behavioral objectives. Develop learning activities.

Learning Manager's Role in Developing Curriculum Materials

1. Write the general and specific behavioral objectives for the marketing competencies.
2. Develop the learning activities to fulfill the behavioral objective.
3. Utilize commercial or D. E. learning resource center instructional materials.

STEP III. D.E. PROGRAM ORGANIZING

Organize the learning activities into modules, blocks, mini-courses, or classes. Schedule and sequence the learning activities into large group, small group, and individualized instruction.

Learning Manager's Role in Organizing Curriculum

1. Decide if the curriculum organization can be completed by the computer.
2. Decide which competencies can be best fulfilled by:
   - a. In-school learning activities
   - b. On-the-job training experience
   - c. D.E.C.A. activities
   - d. Delegation to other resources
3. Decide how the competencies should be sequenced

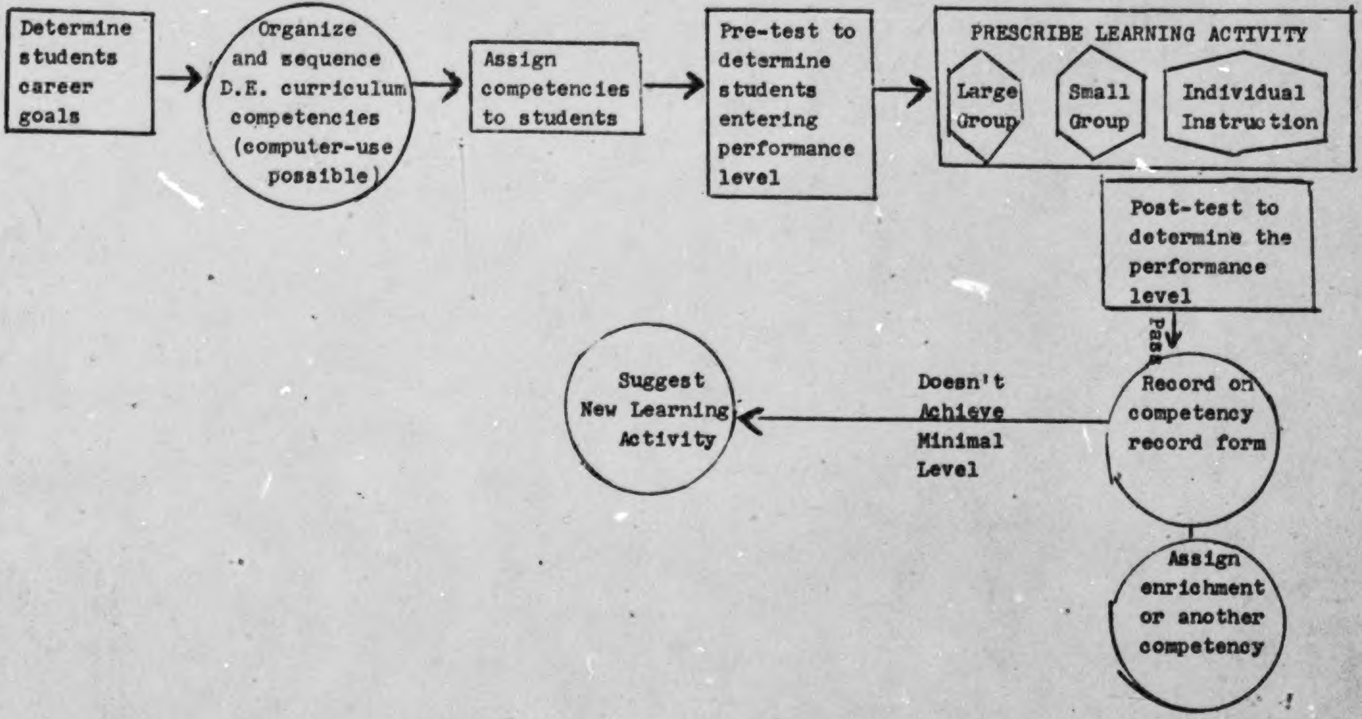
STEP IV: D.E. PROGRAM DIRECTING

Develop a favorable climate for learning. Explain your role as a learning manager. Explain the learning system to the students and initiate the learning activities to fulfill the behavioral objectives.

Learning Manager's Role in Directing Learning Activities

1. Decide what instructional approaches to use in directing the learning activities (See Table I: D.E. Manager of the Learning Process: Can You Direct These Learning Activities or Delegate Them to a Resource Person? on page 7 for a comprehensive list of instructional procedures a learning manager may utilize to direct the learning activities in his program.)
2. Utilize a variety of learning activities to insure motivation and adapt to different learning styles of students.
3. Implement an individualized approach to instruction using the following model.

LEARNING SYSTEM MODEL: DIRECTING THE LEARNING ACTIVITIES OF D.E. STUDENTS



Determine students career goals
Organize and sequence D.E. curriculum competencies (computer-use possible)
Assign competencies to students
Pre-test to determine students entering performance level
PRESCRIBE LEARNING ACTIVITY
Large Group
Small Group
Individual Instruction
Post-test to determine the performance level
Pass
Record on competency record form
Doesn't Achieve Minimal Level
Suggest New Learning Activity
Assign enrichment or another competency

STEP V: D.E. PROGRAM EVALUATION

PROGRAM EVALUATION IS A CONTINUOUS ON-GOING ACTIVITY: The learning manager should constantly be looking for means to improve his value decisions on curriculum and improve his ability to develop and direct the learning activities.

Learning Manager's Role in Evaluating the Learning System

1. Determine additions, deletions, or revisions to competencies of the curriculum.

2. Were the behavioral objectives achieved?
   a. Were performance standards too high or too low?
   b. Were behavioral objectives measurable?

3. Conduct student survey on positive and negative reactions to the system.

4. Could the learning activities have been fulfilled more effectively by a different approach or media?

TABLE I: D.E. MANAGER OF THE LEARNING PROCESS

Can You Direct These Learning Activities or Delegate Them to a Resource Person?

INDIVIDUAL INSTRUCTION

1. Learning activity packages
2. Performance contracts
   a. Learning-Manager proposed
   b. Student proposed
3. Individual counseling
4. Training plan
5. DECA competitive event
6. Programmed instruction
7. Audio-tutorial
8. Merit award program
9. Individual projects
10. Self-appraisal
11. Individual assignment sheets
12. Case problems

OCCUPATIONAL CONTACT

1. Field trip
2. Field observation
3. Field interview
4. Resource speakers
5. Style shows

PROBLEM SOLVING

1. Case problem
2. Role playing
3. Buzz groups (small groups)
4. Brainstorming
5. Individual counseling

MISC. GROUP INSTRUCTION

1. Inter-disciplinary activities
2. Committee projects
3. Bulletin board
4. Supervised study
5. DECA activities

GROUP INSTRUCTION

1. Role Playing
2. Panel discussion
3. Debate
4. Lecture-discussion
5. Newspaper articles
6. Business games

INSTRUCTIONAL MEDIA

1. Films
2. Tape recording.
3. Slides
4. Filmstrips-cassette tapes
5. Video tape
6. Overhead transparency
7. Flip Chart
8. Chalkboard

DEMONSTRATION AND PRACTICE

1. Teacher demonstration
2. Student demonstration
3. Practice and drill
4. Appointment practice
5. Telephone techniques
6. Store-within-the school
7. Simulation projects

READING AND WRITING

1. DECA manuals
2. Trade publication
3. Workbook
4. Magazine and newspaper articles
5. Job study guides

Learning Manager Approach vs. Traditional Teaching

The five steps provided have outlined the functions a learning manager must perform in managing and directing a learning system. The learning manager approach, although it incorporates many of the functions and techniques being presently used by D.E. teacher-coordinators, is more comprehensive than our traditional concept of a teacher. The learning manager approach may be contrasted from the "traditional teaching" approach by the following concepts.

1. The center of activity in the classroom is no longer the teacher as a large group instructor. The learning manager approach places emphasis on the coordinator being a director of learning and individually guiding students through learning activities rather than being a large group lecturer.

2. The learning manager approach will call for an increased emphasis on the use of small group instruction and also the use of delegating learning activities to a variety of resources, both in-school and in the community. (See Group Interaction, Occupational Contact, and Problem-Solving sections of TABLE I on page 5a.)

3. There will be more activities going on in the classroom at the same time. There may be several students working in small groups and other students working on an individualized basis through learning activity packages or audio-tutorial instruction.

4. The classroom will become a resource center which will house a learning system to provide students with the instructional materials to allow them to work individually and progress at their own rate.

5. A learning manager will have to be well organized to set up the filing system for the learning system in a manner that students can easily understand and use in directing their own learning activities.

6. The learning manager will have to become adept at analyzing individual learning problems of students and recommend learning activities which best meet the needs of the particular learning style of the students.

7. The learning systems approach requires a variety of resource materials to provide information on the competencies in many diverse areas such as human relations, communications, selling, product and service technology, merchandising, advertising, display, mathematics, management and operations, career development, and other areas. One standard textbook for each class member will be replaced with the concept of two or three copies of many books as resource materials.

8. The learning manager will now have to evaluate materials on how well students will learn by using them on a self-directional basis rather than how well he can "teach" with them.

9. The coordinator, as a learning manager, will have to organize and sequence individual students' curriculum, not curriculum for the entire class as a group in lock-step instruction.

These are a few concepts which distinguish the activities performed by a so revolutionary or do they present unsurmountable barriers which would discourage you from using a learning systems approach? The major barriers to implementing a learning system have been: (1) Lack of a complete system; (2) Lack of resources; (3) Lack of inservice education on managing the system. Before concluding the article on managing a learning system, it's only fair that certain concepts and approaches be presented that will hopefully assist you in considering to move to a learning systems approach to manage your D.E. Program.

Considerations in Implementing a Learning System

1. No one D.E. teacher-coordinator can plan and develop a comprehensive learning system for his D.E. program. There are projects being developed which will provide many of the elements of a D.E. learning system. The Inter-State Distributive Education Curriculum Consortium Project, directed by Wayne Harrison in Wisconsin, is developing a learning system utilizing learning activity packages. The learning activity packages are developed to fulfill the 983 competencies identified in the Lucy Crawford Study as being needed by workers in selected distributive occupations. There are eleven states involved in this project: Alabama, Florida, Georgia, Indiana, Iowa, Kansas, Kentucky, North Carolina, Ohio, Washington, and Wisconsin. By December of 1973, the states will have developed, field-tested, revised, and printed approximately 350 learning activity packages to fulfill marketing competencies needed by distributive education students. The learning activity packages will have behavioral objectives, suggested learning activities for group and individual instruction, pre-tests, and post-tests. More information can be obtained on this project through the National Director or any of the state directors of the consortium.

2. Enroll in workshops, conferences, or courses which will allow you to initiate work on a learning system for your program.

3. Obtain copies of competency studies and other projects which identify curriculum and instruction elements of a learning system. Ask your state department personnel or teacher educators for sources of information on competency studies and other materials suggested in the section on steps in developing and managing a learning system.

4. Encourage the establishment of a curriculum development committee of your state distributive education teachers association and jointly plan a program of work with your state department personnel and teacher educators to begin work on a state curriculum project.

There are many learning systems being developed and tested in schools throughout the nation. It will not be long until learning systems will be developed and tested in distributive education. A competency-based learning system should provide for us a well-organized, systematic approach to operating D.E. programs and obtaining the accountability which will be demanded of our programs. Will we be ready?

Roger Ditzenberger
Business Education Forum

D.E., Learning Systems, and You

The D.E. Coordinator and Learning Systems' Use

Many professional journal articles and educational conferences are devoted to innovation and change in education. Distributive education coordinators are often asked to utilize innovative curriculum and instruction techniques in operating their programs. Many times coordinators become excited about the learning systems approach for operating their program while they are attending a seminar or workshop but are unable to follow-up on their excitement because of their extremely busy schedules of their local program assignments. Most D.E. coordinators realize the values inherent in a learning system's approach to D.E. program operation and believe that they should be "managers of the learning process" rather than traditional teachers. To change to a systems approach the D.E. coordinator will probably go through many of the following adoption stages:

STAGE 1: Knowledge of the elements of a D.E. learning system.

STAGE 2: Awareness of the values of a systems approach to D.E. curriculum and instruction.

STAGE 3: More thorough knowledge and understanding of a learning systems approach to D.E. program operation.

STAGE 4: Desire to use elements of a learning systems approach in his program operation.

STAGE 5: Analysis of current program curriculum and instruction to determine strengths and areas which need improvement.

STAGE 6: Determine sources of D.E. learning systems input for your local program operation.

STAGE 7: Firm belief and committment that a D.E. learning system is for you.

STAGE 8: Receive inservice training and materials for use in your program.

STAGE 9: Involvement in modifying, changing, and adapting present program operation to adopt a "learning systems approach" to your program.

Needless to say, this is not a painless process. D.E. learning systems are comprehensive, complex, and time-consuming to develop, organize, and implement. The rewards and outcomes for your students are, however, well worth the time, effort, and money expended. No one coordinator should be asked to develop a complete, comprehensive learning system for his program. Coordinators, however, should have a knowledge of learning systems (STAGE 1) and be aware of the values inherent in a learning system (STAGE 2). The Business Education Forum, April 1973, will provide you with excellent background information on using learning systems in distributive education. Coordinators should also be aware of what D.E. learning systems have been developed, such as the Inter-State D.E. Curriculum Consortium Project and what impact it may have on local program operation.

The next section should provide you with a self-analysis checklist which may assist you in determining if your D.E. program is as systematic as you would like it.

Self-Analysis of your D.E. Program

The D.E. teacher-coordinator's role in the future will be compared with that of a manager of a business. As a "learning manager," the teacher-coordinator must be able to plan, organize, direct, evaluate, and revise the curriculum and instruction for his students. The coordinator should be constantly evaluating what he teaches, as well as how he teaches it. The following checklist should provide you with a self-evaluation which will hopefully lead to providing a more systematic approach to your curriculum and instruction.

I. Goals of the Program

____ Yes ____ No A. Students are enrolled in D.E. on the basis of a career interest in marketing and distribution.

B. A primary purpose of our program is for the students to develop:

1. Common competencies such as:

____ Yes ____ No Human relations

____ Yes ____ No Communications

____ Yes ____ No Math

_____ Yes _____ No B. I have spent time on sequencing the competencies within areas, such as

Orientation to D.E.
Human relations
Selling
Product-service technology
Communications
Math
Merchandising
Advertising
Display
Operations and management
Basic economic concepts
Career development concepts

_____ Yes _____ No C. Instructional materials are selected and used on the basis of what competencies are needed by the student rather than on availability of instructional resources to me and ease of use.

_____ Yes _____ No D. I use a variety of learning activities, as well as different types of media. I don't get in a rut of using one or a few learning strategies to develop competencies.

____ Yes ____ No E. Business resources of the community are used in instruction.

____ Yes ____ No F. I have conducted student surveys on positive and negative reactions to my instruction.

____ Yes ____ No G. I frequently visit training stations and consult with sponsors concerning students' progress.

____ Yes ____ No H. Whenever possible, I work cooperatively with training sponsors in developing a training plan for students' on-the-job training.

____ Yes ____ No I. I have spent time with advisory committees to develop competency-based training plans.

____ Yes ____ No J. I spend time on striving for total student involvement in local DECA chapter activities.

____ ~~Yes~~ ____ No K. I spend time in individual counseling sessions with all students--not just the problem student or superior student.

If you would like to improve your D.E. program and feel that the checklist provides you with ideas on where to start, why not investigate what a "D.E. learning systems approach can do for your program?"

TITLE: THE CAREER RESOURCE CENTER: PUTTING IT ALL TOGETHER. AN EXEMPLARY GUIDE.

PERSONAL AUTHOR: SWEETLAND, STEVE; NIEBELING, DENNIS

DESCRIPTOR: *GUIDELINES; *CAREER EDUCATION; *RESOURCE CENTERS; *RESOURCE GUIDES; *EDUCATIONAL STRATEGIES; OCCUPATIONAL INFORMATION; INFORMATION CENTERS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 144P.

ABSTRACT: FOLLOWING AN INTRODUCTION AND DIRECTIONS FOR USING THE GUIDE IN SECTION I, CONTENTS ARE ORGANIZED INTO TWO MAIN SECTIONS: THE CAREER RESOURCE CENTER--STRATEGIES FOR ITS DEVELOPMENT AND USE, AND THE CAREER RESOURCE CENTER--MATERIALS AND RESOURCES FOR ITS IMPLEMENTATION. SECTION II PROVIDES A DETAILED, STEP-BY-STEP APPROACH TO IMPLEMENTING AND UTILIZING A CENTER, INCLUDING OUTREACH, INCENTER, AND COMMUNITY BASED STRATEGIES. FOR EACH SUGGESTED STRATEGY, THE STRATEGY DEVELOPER, STUDENT CAREER DEVELOPMENT LEVEL, PURPOSE, LEARNING LOCATION, AND PROCEDURES ARE PRESENTED. SAMPLE FORMS, SURVEY INSTRUMENTS, AND CORRESPONDENCE ARE INCLUDED. THE METHODS OF CAREER RESOURCE SELECTION, ORGANIZATION, AND UTILIZATION ARE DESCRIBED. SECTION III CONTAINS THE FOLLOWING: COMMERCIAL PRODUCT DESCRIPTIONS, A SUGGESTED LIST OF PUBLISHERS OF CAREER EDUCATION MATERIALS, DESCRIPTIONS OF CAREER INFORMATION SYSTEMS, FREE AND INEXPENSIVE CAREER RESOURCES, AND SUGGESTED GENERAL CAREER REFERENCES. FOREWORD

During the past five years there has been one theme that has emerged in American education that is addressed to the public's demand for relevant instruction, that of Career Education. With that demand, career oriented instruction, supported by the U.S. Office of Education, has now gained a priority position among the major programs to be implemented by today's educators.

The Minnesota State Board of Education, believing in the concept of Career Education, adopted a position paper on Career Education in May 1972. This paper establishes the role of the State Department of Education in relation to Career Education. One of the activities indicated by the position paper is the utilization of occupational resources at every level and in all careers to help the student reach life goals. This charge necessitated the development of programs and materials to provide assistance in implementing the goals of Career Education into curriculum at the community school level. The preparation of this guide provides a viable response to the challenge extended to educators to ready students for the demanding and rapidly changing future of the world of work.

The Career Resource Center: Putting It All Together, an Exemplary Guide developed by staff of the Saint Paul Public Schools, working in Career Education and Guidance programs, defines one process model by which Career Resource Centers can become established in the schools. The procedures, materials and ideas outlined within this guide have been developed and shared with the intent that it will generate enthusiasm among others in education to focus their attention on the career needs of youth. It should be emphasized that the guide represents a beginning, not an end in the development of Career Resource Centers. The authors encourage the study of alternative methods of organizing and operating Career Resource Centers, as it is by this process that we may improve the delivery of career oriented instruction.

INTRODUCTION

The Career Resource Center: Putting It All Together, An Exemplary Guide has been prepared to assist our fellow educators in the development and implementation of career resource centers, to be used with the wide range of secondary age youth they serve. The experience of career development is one shared in common by all students as they gain awareness of their abilities, interests and values. Each of these students can benefit from the systematic exposure to relevant career oriented materials and activities as they set personal goals that will lead them toward an on-going involvement in the world of work. The impact of these exposures is focused on creating a sense of controlling one's destiny; the outcome of which places an emphasis on each individual gaining career management skills that promote self direction.

The body of the Guide is divided into two sections:

1. THE CAREER RESOURCE CENTER:
   STRATEGIES FOR ITS DEVELOPMENT AND USE
2. THE CAREER RESOURCE CENTER:
   MATERIALS AND RESOURCES FOR ITS IMPLEMENTATION

The first provides a step by step approach to implementing and utilizing a center, including out-reach, in-center and community based strategies.

The second provides a listing and description of career resource materials that have been found to be useful in facilitating the career development of youth. Each of these sections were written and prepared after studying many alternative models, and represent a synthesis of the work of career specialists in Minnesota and other states.

The authors of this Guide hope that it will be a valuable resource in the development of programs that meet the unique career needs of each student.

ACKNOWLEDGMENTS

The development of this guide is the result of the support, participation and commitment of numerous people active in Career Education and Guidance in Minnesota. Without their contribution the completion of this project would never have been accomplished. Special mention should be given to Harold T. Lehto, Director of Career Education, Saint Paul Public Schools and to the Pupil Personnel Services Section of the State Department of Education represented by Reynold Erickson and Jules Kerlan for their encouragement and assistance in editing this guide.

Each of the following people deserve our special recognition for their willingness to share of their thoughts and ideas: Len Kodet, Secondary Program Advisor of Career Education, State Department of Minnesota; Virginia Flores, Director of Guidance, St. Paul Public Schools; Jay Ettinger, Career Education Consultant, St. Paul Public Schools; L. Sunny Hansen, Program Coordinator for Counseling and Student Personnel Psychology, University of Minnesota; Vernon Vick, Director of Vocational Education, Roseville Public Schools; Gail Tronnes, Career Specialist, Minneapolis Public Schools; Walter Ostrem, Librarian, St. Paul Public Schools; Marvin Tromp, Director of Public Relations, St. Paul Public Schools; Ken Held, Director of the Career Resource Center, Duluth, Minnesota; George Von Drashek, Director of Vocational Education, North St. Paul Public Schools; Elvira Springer, Director of Guidance, Robbinsdale Public Schools; William Gerdts, Counselor, St. Paul Technical Vocational Institute; Bob Shager, Supervisor of Audio Visual, St. Paul Public Schools.

Additional recognition should be given to the Saint Paul Public Schools, School Board and Administration for their endorsement of Career Education by adopting and supporting the Saint Paul Public School's Position Paper on Career Education, July 1974.

Finally, recognition should be given to the production team including Typist Lois McEwen and Artist David Atkinson for their contributions in preparing the guide for publication.

USING THE GUIDE

In writing and preparing this guide, the authors shared a concern that the prospective readers would possess varying experience in the development of career resource centers. Assuming this to be true, and having a strong concern that the guide have a practical focus, this section was included to provide direction to your study and use.

Each of the following Center Development Stages were posed to assume a logical entry point of the reader's interest and need for assistance.

1. Ground zero — desire to start a Career Resource Center
2. The Career Resource Center is already in existence, but there is a need for more monies to purchase additional materials and equipment
3. You have a Career Resource Center, but it is not being fully utilized by the students and staff
4. The Career Resource Center is already in existence, but there is a need to evaluate career materials, reorganize the materials, or develop some other methods to get the information to the students
5. Your Career Resource Center is already in operation, but there is a need for more career related materials and equipment

By identifying your situation relative to each of these stages and then following the suggestions offered, you may save considerable time in locating the ideas, methods and materials that are specifically directed to your individual needs. Each of the stage descriptions include objectives and a study focus that will assist you in your efforts.

Center Development Stage: Ground Zero — desire to start a Career Resource Center

Objectives:

1. To implement a Career Resource Center
2. To utilize a Career Resource Center
3. To select resources for the Center

Study Focus: Beacuse each school varies considerably in the amount of existing equipment, materials, monies, staff and administrative support, we suggest you read through section II of the guide and make use of the information which is applicable to your situation.

Center Development Stage: The Career Resource Center is already in existence, but there is a need for more monies to purchase additional materials and equipment.

Objectives:

1. To purchase more materials.
2. To purchase more equipment.
3. To receive more money to up-date existing materials and occupational files.

Study Focus: Check the table of contents for the section of the guide that is titled "How Do You Get Funds To Develop and Operate A Career Resource Center." You may find some new ideas to use.

Center Development Stage: You have a Career Resource Center but it is not being fully utilized by the students and staff.

Objectives:

1. To develop an awareness on the part of the students.
2. To develop an awareness on the part of the staff.
3. To develop an awareness on the part of the parents.

Study Focus: Check the table of contents for the section of the guide on "Career Resource Center Utilization Strategies". There are some outreach, in-center, or community resource strategies that may be of some help to implementing your center.

Center Development Stage: The Career Resource Center is already in existence, but there is a need to evaluate career materials, re-organize the materials or to develop methods to get information to the students.

Objectives:

1. To evaluate career resources.
2. To organize career materials.
3. To deliver the information to the student.
4. To develop career activity packages.

Study Focus: Refer to page 61 for the section on "Methods of Career Resource Selection, Organization and Utilization" for many suggestions, examples and ideas that should help you achieve the above objectives.

Center Development Stage: Your Career Resource Center is already in operation, but there is a need for more career related materials and equipment.

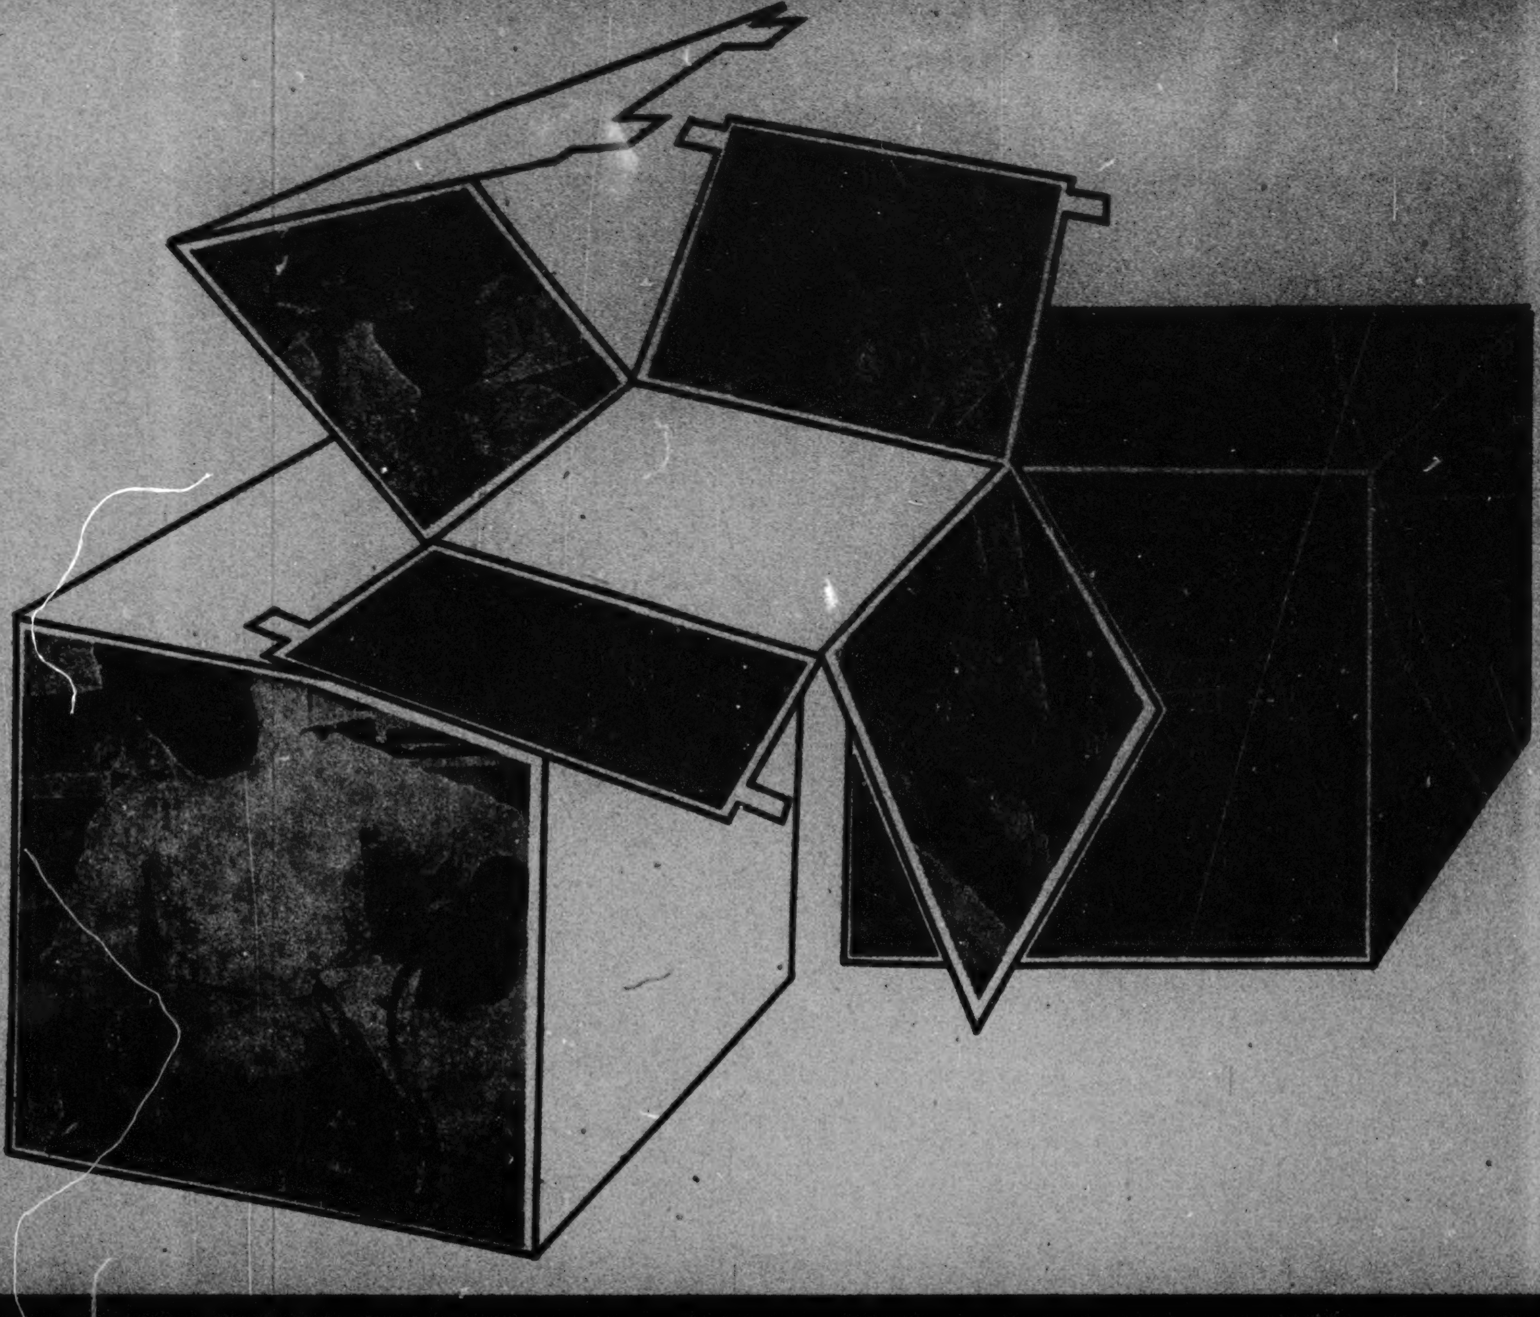
Objectives:

1. To know what commercial products have already been field tested in career resource centers by practitioners.
2. To learn where these products are available.
3. To become knowledgeable of their approximate costs.
4. To learn appropriate age levels for product use.
5. To learn how to obtain free and inexpensive career related materials.

Study Focus: Refer to section III of the guide which describes commercial products, career information systems, Minnesota career resources, free and in-expensive materials and other career references.

THE CAREER RESOURCE CENTER:

strategies for its development and use



CAREER RESOURCE CENTER IMPLEMENTATION STRATEGIES

Why A Career Resource Center?

The purpose of a Career Resource Center is to provide a single centralized place where students, teachers and counselors can secure up-to-date relevant career information and assessment tools. Each of these groups will benefit from assembling, organizing and dispensing the information from one center staffed with trained personnel. Materials for the center should be gathered from the library, classrooms and counseling offices. By collecting all career materials in the school, an accurate inventory can be taken to determine the need for supplementary acquisitions and significantly increase the exposure of these materials to those seeking information.

Support for the development of a Career Resource Center can best be accomplished by forming a committee of interested staff, representing a variety of disciplines. Leadership for the centers usually comes from the guidance and counseling department, as counselors generally have the broadest concerns for the career development of students. Using the systems approach of identifying the most accepting and interested group to initiate planning, should be emphasized as the most effective means of getting started.

The immediate task of the committee should be establishing a rationale for having a Career Resource Center. The collection of "hard data" to support the development of C.R.C. is often useful. There are a number of commercially developed needs assessment instruments that can provide data to justify a Career Resource Center, they include:

Assessment of Career Development
Career Planning Program
Houghton Mifflin
1900 South Batavia Avenue
Geneva, Illinois 60134

Career Maturity Inventory
C.T.B. McGraw-Hill
Delmonte Research Park
Monterey, California 93940

Counseling Priority Inventory
Educators Assistance Institute
2500 Colorado Blvd.
Santa Monica, California 90406

Not only do these instruments provide a basis for the development of a C.R.C., but they also provide data that will be useful to infuse career education into the curriculum and assist individual students.

Additional justification for the development of a Career Resource Center can be gained by referring to the American College Testing Program Study and the Position Paper on Career Development written by the A.V.A. - N.V.G.A. Commission on Career Guidance and Vocational Education. The first provides statistical support, and the latter a narrative description for the need for career guidance.

The article "Career Development of Youth: A Nationwide Study" by Prediger, Roth and Noeth, written in the October 1974 issue of the **Personnel and Guidance Journal** provides further support for career related instruction by describing students perceived needs for help. "One of the most striking findings of this study is students' apparent receptivity to receiving help with career planning. More than three fourths of the nation's high school juniors would like such help; the proportion is almost as high for 8th graders. In both grades, more girls than boys are looking for career planning help. If recognition of the need for help with career planning is interpreted as an indicator of readiness, then American teenagers appear to be anxious to get on with career development.

Help with "making career plans" is far the major area of need indicated by 11th graders; "finding after-school or summer work" is in second place. Far down on the list is "discussing personal concerns," the primary task for which many schools counselors have been trained.

What Can A Career Resource Center Do?

The general services outlined in this section provide a broad base upon which to develop strategies for effective utilization. The following discussion of C.R.C. services is offered as an initial suggestion, however, it should not limit the development of other creative strategies. Springer and Johansen's article "Career Resource Center: An Extension of the Guidance Services to Students", **Pupil Personnel Services Journal** Minnesota Department of Education, Vol. 3 No. 3 1974 provides the background for the following:

Services to Students

1. Identification of post-secondary training opportunities.
2. Visits by institutional representatives.
3. Availability of post-high school training catalogs.
4. Administration of career inventories (need assessment, interest, values and job satisfaction).
5. Special needs groups (decision-making and job preparation).
6. Exploration and study of career alternatives.
7. A place where students can drop in and browse through career materials.
8. A place where students can talk with each other about careers.
9. A place where there is one or more adults available to listen and talk with the students about their career plans as well as help develop ways that these plans can be achieved.

10. A place that may provide a job placement service.

Services to Teachers

1. Availability of career-related classroom materials.
2. Career consultant service available to suggest infusion techniques.
3. A place where teachers may refer students that have questions about careers.

Services to Counselors

1. Pre-graduation/decision-making assistance.
2. Financial aid information.
3. Evaluation or career materials.
4. Parent visits.
5. Career exploration activities.

In developing specific strategies, it is helpful to have an organizational system to guide your efforts. The Career Information Media: The Complete Spectrum format developed by Albert Thompson of Teachers College, Columbia University provides an excellent method of assessing the comprehensiveness of your career information system.

10. On-The-Job-Tryout:
    Part time and summer jobs
    work study programs.

9. Directed Exploratory Experiences:
    Work Samples —
    Work Evaluation Tasks.

Provides direct contact with actual work situations

8. Direct Observation:
    Visits to work settings.

7. Synthetically Created Work Environments:
    Combination of stimuli and
    environmental manipulation.

6. Simulated Situation:
    Career Games — Role Playing

Simulation of Work Settings and Occupational Roles

5. Interviews with Experts:
    Questioning representatives of
    occupations — Career Days.

4. Computer Based Systems:
    Computer systems which store, retrieve
    and process occupational data in
    response to individual requests.

3. Programmed Instructional Materials:
    Books — workshops
    career kits.

2. Audio Visual Aids:
    Films — tapes — slides — etc.

1. Publications:
    Books — Monographs — charts —
    pamphlets — catalogs —
    directories — etc.

Information is processed by and adapted to the needs of the individual Information is prestructured, fixed, and designed for general use

How Do You Write A Plan Or Proposal?

Upon the completion of the needs assessment and the identification of services to be provided, a committee can begin the task of developing a proposal that has substantial support based on student needs and projected outcomes.

In preparation for writing a proposal it is helpful to develop an outline to organize your thoughts. The sample below is offered as an aid to assist proposal writers.

Name of Proposal: ________________
Submitted to: ________________
Submitted by: ________________
Purpose: ________________
    Justification: ________________
    Projected Utilization: ________________
    Student Outcomes: ________________
Requirements: ________________
    Space: ________________
    Materials (Hard and Soft): ________________
    Staff: ________________
Budget: ________________
    Re-Modeling: ________________
    Equipment: ________________
    Materials: ________________
    Staff: ________________

How Do You Get A Career Resource Center Started?

A graphic look at the process of implementing a Career Resource Center can be studied in Kosuth's and Miltenberger's, **Teaching For Career Decision-Making** where a flo chart is used to diagram each step. The 15 steps are also described in an expanded description of the process. The steps listed below represent their implementation plan.

Steps

1. Determine Needs
2. Develop C.R.C. Proposal

3. Administrative Approval
4. Funding
5. Obtain Space and Staff
6. Order Equipment, Materials and Supplies
7. Develop Career Activity Packages for Center Use
8. Orient Center Staff
9. Orient School Staff
10. Arrange for Exposure to Business, Industry and Community
11. Orient Students to Center
12. Develop Records on Students Using Center
13. Develop Evaluation Tools
14. Develop Follow-Up Tools
15. Make Necessary Adjustments Based on Evaluation

Additional resources that will aid those developing a C.R.C. would include:

How Do You Get Funds To Develop And Operate A Career Resource Center?

The lack of money should not be a barrier to implementing your Career Resource Center! Remember this venture is a cooperative effort and will take time and monies from numerous sources to fully be effective. You may wish to develop a plan or proposal to begin your Career Resource Center and submit it to the Administrator, Superintendent, Principal, or the Department of Career Education. Many other sources of funds can also be used in providing the center with appropriate material and facilities. You should consider all of these sources of funds in your planning:

1. Principal's Fund
2. Audio Visual budget
3. Library budget
4. Vocational Education Funding
5. Guidance budget
6. P.T.A. contribution
7. Local industry contribution

NOTE: Shared financial responsibility for implementing a Career Resource Center can make your project a reality!

Your request for funds can be greatly aided when you can demonstrate that only necessary and high quality materials are being secured. The materials listed in this guide should support you in this effort. Additional information on funding Career Education projects can be obtained by reviewing Ryan's **Career Education, A Handbook of Funding Resources.**

How Do You Design A Career Resource Center?

Location — The Career Resource Center should, if possible, be convenient to the guidance department, and away from the administrative offices. Another possibility may be to have it located convenient to the lunchroom or commons area, if it is well staffed. Still another possibility is to locate the center near the front entrance, especially if it is to be used by the community.

The following diagram is provided to give you some idea as to the general space allocations to be alloted to each of the different components of the center. As you study your floor plan, it will be necessary to establish priorities depending on available space. Each of the examples that follow suggest possible methods of allocating space depending on its availability.

Materials and
Post Secondary School
Catalogs
Audio Visual Equipment
Study Carrels
Materials for Classroom Use
Small Group
Meeting Area
Counseling
Offices

Space — In most cases a converted classroom will have to suffice for the Career Resource Center. A room 24' x 30' or larger will allow room for:

1. An open display system for much of the career materials. The system may include bookcases, free standing or wall mounted pamphlet display racks, bulletin boards and open bin filing systems.
2. Study carrels or other independent study areas.
3. Small group discussion area.
4. Space for equipment such as sound filmstrip projectors, tape players, Microfiche reader, viewdeck, etc.
5. Secretaries desk or para-professional's desk.
6. Office space for the Career Counselor.
7. Copy machine, used to make copies of one of a kind materials so that the student may leave the center with something in their hand.

If the room is larger, some of the following ideas should be considered:

1. Combination work room-storage area. This area may be used to store extra materials and packets of career materials to be checked out to the classrooms. Also stored in this area may be equipment such as a 16mm film projector and tape player (to be used for large groups) if the budget allows.
2. A Career Cart System.
3. Office for a Work Experience Coordinator.

Other needs to consider in the Career Resource Center are:

1. Plenty of electrical outlets to allow for room arrangement and location of the audio visual equipment.
2. Permanent projection screen.
3. Telephone.
4. Typewriter.
5. Informal furniture, etc.
6. Adequate budget for up-dating, supplementing, and resupplying the necessary materials.
7. Making the center appealing to the student. Get away from the school look if possible.

Staffing — There should be a Career Counselor in charge of the Career Resource Center. His or her tasks should include:

1. Development and implementation of the Center.
2. Ordering equipment and materials for the Center.
3. Developing systems for referring students to the Center.
4. Arrange for speakers, programs, interviewers, post-secondary school representatives, etc.
5. Keeping abreast of the latest developments in Career Education.
6. Conduct group guidance programs.

There is a real need for a full time para-professional in the Center also. The following tasks are examples of what this person may be expected to perform:

1. Locating information for the students and teachers.
2. Setting up apointments with speakers, interviewers, post-secondary school representatives, military representatives, etc.
3. Administer surveys, inventories, etc.
4. Show the students how to operate the equipment.
5. Write thank you letters.
6. Write for additional materials.
7. Maintain card files and index systems.
8. Help students fill out application forms.
9. Keep a running inventory of equipment and materials.
10. Setting up bulletin boards.
11. Orientating students and staff to the Center.

Floor Plans — The design of a Career Resource Center will be dictated by many variables such as the room, space, funds, location, electricity, etc. The floor plans provided are samples of what has been implemented in four different schools. They provide alternative methods of organizing a center, and should provide you with some initial ideas for consideration in your planning. One method that could be explored is organizing the Career Resource Center into two developmental components:

1. **Knowing myself and occupations**
   (orientation and exploration — focus on self and occupational awareness)
2. **Preparing for work**
   (planning and preparing — focus on decision-making and job preparation)

This developmental - sequential pattern is a composite structure of "The Career Management Program" and "The Occupational Clusters of Career Education Maturity." Each component is designed to operate as a separate unit. As the student develops his/her career maturity, he/she would move on to the next developmental level. This approach is suggested, as the career maturity of students age 12-18 changes considerably.

How Do You Phase-In Materials And Equipment?

A common problem that perplexes all Career Resource Center developers is meeting the rising cost of implementing a center. The cost of a well equipped center necessitates phasing in equipment and materials over a period of years. The three stage phase-in process outlined below is offered as a suggestion of one method of ordering priorities in the implementation of a Career Resource Center.

A suggested 3 year phase in program of Career Resource Materials:
Phase 1 — Materials and Equipment

- Career File (i.e. Occupational File from Chronicle Guidance or Careers)
- Career Index
- Career World
- Sound filmstrips on Occupations
- Sound filmstrips on Career Related Topics
- Occupational Outlook Handbook
- Job Survival Kit
- World of Work I & II
- Readings in Interpersonal Relationships
- KEYS or Career Clusters
- Sound Filmstrip Machines
- Tape Recorders
- Projection Screen
- Shelving and display racks
- Study Carrels
- Desk
- Chairs
- Tables
- Files
- Free Materials
    1. Post high school training information
    2. Vocational directory
    3. U.S. Department of Labor
    4. Local Office of Minnesota Department of Employment Services
    5. Civil Service
    6. Scholarship information
    7. Military
    8. Health Careers
    9. Local businesses
    10. Apprenticeship information
    11. State Department of Education

Phase II — Materials and Equipment

- Career Tapes
- Microfiche (i.e.: VIEW, Job Bank, Chronicles)
- Comic Books (King and I.P.D.)
- Vocational Biographies
- Hello World
- Discovery
- Job Experience Kit
- Cross Vocational Skills
- Encyclopedia of Careers (Vol. I & II)-Ferguson
- Career Opportunities (5 Vol. set)-Ferguson
- Civil Service Examination Manuals
- Slide Projector
- Microfiche Reader Printer

Phase III — Materials and Equipment

- Computer
- Storage Cabinets — Mobile
- Carts
- Other Kits

The following Career Strategy Descriptions represent activities that can be found at all levels of Thompson's career information system format. The descriptions have been organized into three categories for your convenience:

1. Out-Reach Strategies
2. In-Center Strategies
3. Community Based Strategies

The Index that precedes the descriptions is provided to aid in the location of desired career strategy information.

The diagram that follows provides a graphic introduction to the relationship the Career Resource Center has as the focal point of a school's career education program.

How Do Out-Reach Strategies Promote Center Use?

Career Strategy: **Career Resource Center Open House**

Strategy Developer: Career Resource Center, Mechanic Arts High School, St. Paul

Staff Career Development Level: Orientation

Purpose: To allow the staff to become acquainted with the Career Resource Center

Learning Area: Career Resource Center

Procedure:

One method of getting the staff to become more aware of what the Career Resource Center is and what services it can provide for the staff and students is to have an open house. There are any number of ways this can be done: (1) open house for one department at a time, (2) open house all day and invite the staff to come in during their prep time. Maybe have coffee and cookies available, (3) open house after school instead of a staff meeting, (4) being part of total school open house where the parents can visit the Career Resource Center also.

Career Strategy: **Career Contact Sessions**

Career Developer: Unknown

Staff Career Development Level: Orientation

Purpose: Encourage staff involvement in career program through utilization of the Career Resource Center

Learning Area: Career Resource Center

Procedures:

Selectively invite interested staff to Career Resource Center. Identify staff that you perceive as most supportive of career education. Seek out their ideas about how the center could be used. Share possible materials and strategies that they could successfully infuse into their classroom instruction. See the following Guidelines for Innovators . . . Systems Approaches to Career Development/Career Education Programs for specific suggestions to implement this strategy. The Guidelines were obtained from **Orienting Prospective Teachers to Career Education** — T.E.C. module one, developed at the University of Minnesota.

24

GUIDELINES FOR INNOVATORS . . .

SYSTEMS APPROACHES TO CAREER DEVELOPMENT/CAREER EDUCATION PROGRAMS

General Guidelines

1. Build a relationship with the system (Internal or External Consultant: Analyze your position in the system)
2. Diagnose the system — Preassessment (Needs or cause of problem; Communications, relationships) Why system needs changing
3. Provide a strategy (potential solution to meet need) Have a specific plan
4. Analyze resources — existing and needed Human and non-human resources Financial, physical, other
5. Implement the strategy
6. Assess the effectiveness of the strategy How do you account for the change? How do you document the change?
7. Provide for feedback into decision-making, improvement, and redesign
8. Provide for dissemination of results

Systems Evaluation

1. Analyze the population
   What is your target population?
   For whom is the program intended?
   Is in-service training needed?
2. Analyze the setting
   In what kind of setting or environment is the program to operate?
3. Analyze the community
   What are the relevant needs and characteristics of the larger community in which the setting is located?
   What other agencies might be affected or involved?
4. Analyze the objectives
   What are the objectives or your innovation, stated specifically and behaviorally?
   What are your priorities among your objectives?
5. Identify the methods
   What method, media, and materials will you use for developing and implementing your program?
   What methods will you adapt, develop, or create?
6. Analyze the outcome
   To what extent has each objective been achieved?

You As A Change Agent

1. Be open, responsible, competent and available.
2. Build a support system including people who
   —are trusted, open, competent
   —have some power or status within the system
   —are risk-takers or innovators in the system
   —communicate well with others
3. Choose a change strategy which is reasonable, feasible (not too big a change too fast)
4. Choose an innovation that will not be too threatening to too many
5. Anticipate resistance and the forms it will take (apathy, hostility, etc.)
6. Choose a strategy that has a good chance of succeeding — success breeds success
7. Build a communication system in a variety of ways — person-to-person, coffee chats, feedback mechanisms
8. Seek both internal and external support (administrators, parents, curriculum directors, faculty council)
9. Have some alternative or backup strategies
10. Be prepared to negotiate
11. Provide incentives and rewards for participation
12. Constantly evaluate content and Process

Career Strategy: Career Coffee Klatch

Strategy Developer: Unknown

Staff Career Development Level: Orientation

Purpose: To familiarize staff with the materials and services of the Career Resource Center

Learning Area: Career Resource Center

Procedures:

Invite staff by departments to visit the Career Resource Center. Keep the session low keyed and personalized to encourage active participation by staff.

Direct session toward staff needs and interests through informal questions and answers. Encourage their input and stress the use of career skills tasks as a means of directing and coordinating a school wide careers program.

Career Strategy: Career Resource Inventory

Strategy Developer: Unknown

Staff Career Development Level: Orientation

Purpose: To make available a current listing of all materials located in the Career Resource Center to all staff. The inventory will increase staff awareness and utilization of Career Resource Center materials.

Learning Area: Career Resource Center

Procedures:

Compile a Career Resource Inventory, using career levels i.e. exploration, course titles i.e. English as organizational units. Distribute inventories at staff or department meetings.

Note: Add supplements to the inventory as new materials are added to the Career Resource Center, encourage all staff to suggest materials to be acquired. See inventory card below to see career inventory format.

CAREER RESOURCE
INVENTORY CARD

Format Code ________

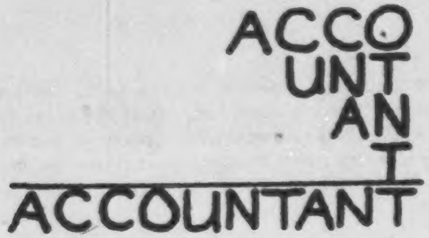
Move forward to the guidance department or Career Resource Center.	

Career Strategy:	**Career Doodles**
Strategy Developer:	**Career World Magazine**
Student Career Development Level:	All levels
Purpose:	To provide awareness and motivation toward the study of career options.

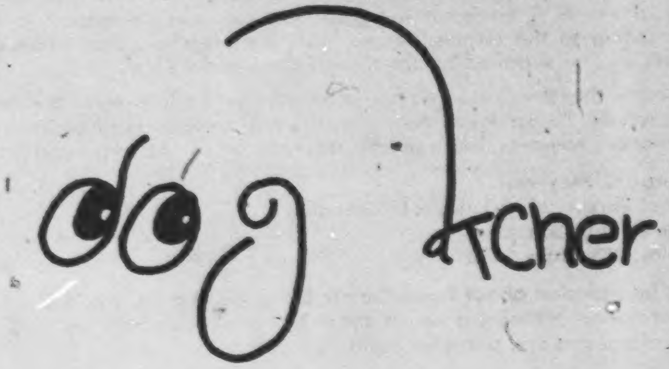


Career Strategy:	**Career Bulletin Board**
Strategy Developer:	
Student Career Development Level:	Orientation
Purpose:	To inform the students about what the Career Resource Center is and what it has to offer to the students.
Learning Area:	Hallway
Procedure:	The design of the bulletin board and the up-dating of the information can be the responsibility of the Career Resource Center Coordinator, the para-professional aid, the volunteer, or the students.

Learning Area:	Hall or classroom Bulletin board.

Procedures:

Sponsor a contest to encourage students to draw career doodles. Use Career World magazine to give students a few ideas about possible careers they could draw (doodles). Award prizes for the best doodle drawing i.e. pizza. See following for an example of a career doodle.



Career Strategy:	**Career Cart**
Strategy Developer:	Eau Claire Public Schools, Eau Claire, Wisconsin
Student Career Development Level:	All levels
Purpose:	To transport career materials to the classroom, auditorium, etc.
Learning Area:	Classrooms.

Procedures:

Career Cart. The Cart is a unit on wheels that allows for a convenient method of disseminating and transporting career materials to the classroom. The following list of materials and equipment should be a permanent part of the Career Cart: (1) The Occupational Outlook Handbook, (2) A College guide, (3) The Directory of courses offered in area vocational technical institutes, (4) Apprenticeship Information Guide, (5) Minnesota Association of private vocational schools directory, (6) Scholarship and Financial Aid Information, (7) A guide for finding a job (8) The five volume set of career technicians and specialists, (9) a filmstrip projector and filmstrips, (10) a tape player and tapes. The Career Cart should have a display area for the printed material and a cabinet for storage of the A.V. equipment. Other materials can be added to the cart according to the request of the individual teacher. The additional materials can be supplied by the Career Resource Center.

In all probability the Career Cart will have to be built to meet the need of each school. To our knowledge there is not a commercial career cart on the market, however, more specific information can be requested from:

Mr. George G. Meyers
Director of Personnel and Public Information
Eau Claire Public Schools
Eau Claire, Wisconsin 54701

Request information about Porta-Cluster Carts, project no. 59-71-0166-2. The information contains a list of materials and equipment as well as pictures of the cart and plans for building a cart.

Career Strategy:	**Career Day**
Strategy Developers:	Mrs. Arline Devall and Miss Marlys Peterson, Counselors at St. Paul Johnson High School.
Student Career Development Level:	Exploration
Purpose:	To better acquaint students with careers for which they have shown interest.
Learning Area:	Classrooms

Procedure:

Career Days. St. Paul Johnson High School has had a Career Day the last two years, at which time they had fifty speakers representing fifty different careers each year. The speakers explained the type of work they do, job potential, training requirements, working conditions, life styles, and other pertinent information related to their career choice.

The Career Day was designed for the sophomores and juniors. Each student was given a sheet listing over fifty different careers of which they were to select the four most interesting to them. The math department then programmed each of the students into four mods of one-half hour each. The students were then given a schedule to follow for the afternoon telling them the room number, the career area, and the name of the speaker. When ever possible the guest speaker was a person from the Johnson community.

Career Strategy:	**Mini Career Days**
Strategy Developer:	Dan Sorenson, Counselor, Murray High School, St. Paul.
Student Career Development Level:	Exploration
Purpose:	To allow students to explore career areas for which they may be interested.
Learning Area:	Auditorium

Procedure:

Career Areas are explored one at a time with the junior class when the area of communications is explored, guest speakers from radio, newspaper, T.V., etc., are asked to come in to speak to the students about the career oportunities in the area of communications. At other times during the year the students are exposed to career areas such as the arts, science, construction, etc.

Career Strategy:	**Informational Guide Booklet for Seniors**
Strategy Developers:	Robbinsdale Public Schools
Student Career Development Level:	Planning
Purpose:	A guide for helping students and parents plan for whats after high school.
Learning Area:	Usually the home.

Procedure:

Informational Guide Booklet for Seniors. The booklet contains basic factual information that each high school senior should consider before finalizing any post-secondary plans. This booklet must be up-dated each year before copies are distributed to each member of the senior class. The following is a general outline of the contents of the booklet: (1) The kinds of resource materials and information available in the Career Resource Center and the Guidance Offices, (2) How to go about finding a job, employment offices, and what information you should have with you when job hunting, (3) Apprenticeship information, (4) Considerations in selecting a post-secondary school, (5) Scholarships and financial aids, (6) What are area vocational technical institutes and what courses do they offer (7) Information about college entrance testing, (8) Information about the Minnesota Community College System, (9) Information about the University of Minnesota, its two technical colleges, programs and costs, (11) Listings of private colleges, their location and costs, in the state of Minnesota. This booklet is not only helpful to the student but is also very helpful to the parent. It also provides some good public relations for the school, the Career Resource Center, and the Guidance Department.

Career Strategy: **Career Resource Center Newsletter.**

Strategy Developer: Career Resource Center, Mechanic Arts High School, St. Paul.

Student Career Development Level: Orientation

Purpose: To keep students informed about the activities of the Career Resource Center.

Learning Area: Homeroom

Procedure:

Career Resource Center Newsletter. In addition to the school newspaper it may be desirable to print a newsletter that originates from the Career Resource Center. The contents of the newsletter may include: (1) When guest speakers are scheduled, (2) When post-secondary school representatives are scheduled, (3) Career articles, (4) New career materials for teachers (5) Information to parents as well as students, (6) College testing dates, (7) Application dead-lines (8) New career opportunities.

Career Strategy: **Career Resource Center Logo**

Strategy Developer: Career Resource Center, Mechanics Arts, St. Paul.

Student and Staff Career Development Level: Orientation

Purpose: Identification of Career Resource Center Communications.

Learning Area: The whole school.

Procedure:

In order to make the students and staff more cognizant of the Career Resource Center you may want to develop a logo that appears on all items of communication that originate from the Center. The logo can be printed as part of every form and used as part of the letterhead or you may want a rubber stamp with your logo on it. The logo also can be used for identifying the career column in the school newspaper.

How Do You Get The Most Out Of In-Center Strategies?

Career Strategy: **Career Resource Center Interview Sheet.**

Strategy Developers: Career Resource Center, Mechanic Arts High School, St. Paul.

Student Career Development Level: Exploration

Purpose: To record information gathered during individual interviews conducted in the Career Resource Center.

Learning Area: Career Resource Center

Procedure:

A form that was developed to be used by volunteers that conduct individual student interviews in the Career Resource Center. The form is simple in nature and asks only for information such as post high school plans, interests, hobbies, work experience, and the kinds of services the student would like from the Career Resource Center. There is space for the interviewers comments as well as space for listing suggested courses the students should consider in pursuing their post high school planning. The form is designed for interviewing the student in his/her 10th, 11th, and 12th grades.

Career Strategy: **Career Skills Survey**

Strategy Developer: Steve Sweetland, Counselor, Career Study Center II.

Student Career Development Level: All levels

Purpose: To provide a current career needs assessment by surveying the students and having them rate their need for help toward the completion of career skills tasks.

Learning Area: Career Resource Center or classroom.

Procedures:

Explain purposes of taking the career skills survey to students. Have students complete the survey. Have students develop specific goal statements, based on their response to the career skills survey. See preceding Career Skills Survey Exploring and Planning to study specific items.

Career Strategy: **Career Inventories**

Strategy Developer:

Student Career Development Level: Exploration

Purpose: To identify student occupational characteristics and occupations that the student may wish to explore.

Learning Area: Career Resource Center

Procedures:

Administer the career inventory to those students who wish to gain an awareness of the relationship between their personal characteristics (interest, aptitudes, values, etc.) and occupations. The inventories listed below represents a sampling of some of the most recent on the market:

Pictorial Inventory of Careers
(See commercial product description

Self-Directed Search

Career Strategy: **Priority Counseling Survey and the Vocational Exploration Group.**

Strategy Developer: Orlando Andvik, Counselor at Harding High School, St. Paul.

Student Career Development Level: Planning

Purpose: To help high school seniors with career planning.

Learning Area: Small group Guidance area.

Procedure:

The Vocational Exploration Group technique that is being used at Harding in career counseling involves five students and a leader going through a personalized two-hour exploration of what the job involves — are you working primarily with people, data, or things? — what skills and interests do you have to bring to the job? — and what kinds of satisfaction do you get from the job?

With the approach learned through the VEG experience, the student has a tool for evaluating any of the thousands of jobs he might become interested in at any time.

Harding's present seniors took the priority counseling survey last year, and 191 seniors checked "more help with career planning and choices" as their top counselor need. This pool of 191 seniors is being drawn on for the groups of five students at a-time who are being taken through the VEG experience.

If results at Harding, where this is just beginning, are the same as at other schools around the country, the seniors who have this experience will show less dogmatism, more flexibility, greater job awareness, and less alienation than their counterparts who did not receive the two-hour session.

Career Strategy: **Community Resource Program**

Strategy Developer: Mary Jane Moore, Counselor at Harding High School, St. Paul.

Student Career Development Level: Exploration

Purpose: To better acquaint the students with the careers for which they have shown interest.

Learning Area: Classroom or Career Resource Center.

Procedure:

Community Resources Program. St. Paul Harding High School has developed a Community Resource Program to assist the students in the career decision-making process. A school wide survey of the students career interests is made to determine the career areas in which the students are most often requesting information. The students are asked to answer the question "what would you like to be doing ten years from now?"

After the responses are tabulated, guest speakers from the community are asked to come into the school and speak with the students about their careers. The only students that are invited to attend are the ones that have shown interest in that particular career.

During the second and third trimesters of the 1973-74 school year 1020 students were accommodated through 36 of these seminars. The speakers were asked to stress job responsibility, training programs, suggested high school courses, good school attendance and life styles.

Career Strategy: **Case Study Interviews**

Strategy Developer: Career Resource Center, Mechanic Arts High School, St. Paul.

Student Career Development Level: Exploration

Purpose: To infuse career exploration into the classroom.

Learning Area: Classroom

Procedure:

The **Hello World** series (mentioned in the commercial product description section) is written in interview form. Have each student read about a career they are interested in to find out what questions are asked. Then have the student interview someone he knows to obtain details of that person's job. Ask the student to write a report of the interview, describing the daily routine, the personal satisfactions and emotional and physical stresses of the job, and how it differs from what one might expect.

Career Strategy: **Case Study Essays**

Strategy Developer: Vocational Biographies, Inc.

Student Career Development Level: Exploration

Purpose: To integrate career information into the classroom.

Learning Area: Classroom

Procedures:

The **Vocational Biographies** (mentioned in the Commercial Product Description section) are written in informal newspaper style and are only 4 pages long. The English teacher may ask the students to select six biographies of persons in different occupations and write an essay showing how the life styles are in contrast because of the occupations. Any teacher may ask the students to select a biography to read for the following information: (1) How did the subject arrive at his/her present career—by chance, through the influence of other people, because of National economic conditions, or by his/her own determination? (2) How has his/her experience prepared him/her for new situations caused by changes in his/her family, location, and job trends? (3) Is he/she satisfied to remain at his/her current level or occupation, or has he/she set new goals for himself/herself? Then discuss the students' observations in class.

Career Strategy: **Career Resource Center Job Sheet**

Strategy Developers: Marlene Rynard and Dennis Niebeling Counselors at St. Paul, Mechanic Arts High School.

Student Career Development Level: Exploration

Purpose: A method of getting students into the Career Resource Center for career exploration.

Learning Area: Career Resource Center

Procedure:

Each student fills out a card with his/her name and tentative career choice, the cards are filed in the Career Resource Center. When the student comes to the Center, the para-professional will then help fill out a job sheet that will list the resources in the Center that have information about that career. The student can then complete as much of the job sheet "as they wish when time permits."

A sample of the "job sheet" is on the next page. Along with the "job sheet" goes a single sheet profile that outlines the personal traits, physical assets, school interests, and outside interests that are common for each career.

1. Did I complete the above perscriptions?
2. Do I want this to be my career choice?
3. If yes, what must I do next?
4. If yes, you may want to go on to the Job Survey Sheet (if you haven't already done so).
5. Where is training available?
6. If no, what must I do next?

Career Strategy:	**Career Survey Packet**
Strategy Developers:	Marlene Rynard, Counselor; Dennis Niebeling, Counselor; and Dennis Jensen, Work Study Coordinator all of Mechanic Arts High School, St. Paul.
Student Career Development Level:	Exploration
Purpose:	To allow the student to explore his/her present values and interests as well as to explore five or more career interests.
Learning Area:	Career Resource Center

Procedure:

Career Survey Packet. The Career Survey Packet is an individualized study unit that can be used in the classroom or in the Career Resource Center. It is designed for easy reading and does not have to be completed in any specific time period. The packet contains a simple pretest, general information about careers, a simple values inventory and easy interest inventory, five job survey worksheets and a post-test.

When the student completes the Packet he/she will know: (1) The need to look at his/her own values and interests before he/she decides on a certain type of work. (2) The need, at this time in his/her life, of looking at a great number of job groups (clusters) and jobs within each group. (3) The need to match interests and values to job choice. (4) The need to keep an open mind because of changing values and/or interests as a person gets older. (5) Of at least five career interests in five different clusters. (6) How to prepare for specific jobs. (7) How to find out about a job in the future. (8) How to locate materials in the Career Resource Center.

CAREER SURVEY

NAME:____

GRADE:________________

DATE STARTED:______________________ DATE COMPLETED:______________________

COUNSELOR SIGNATURE (TO BE SIGNED BY COUNSELOR AFTER SURVEY IS COMPLETED)

____

You, after finishing this unit, will know:

1. the need to look at your own values and interests before you decide on a certain type of work
2. the need, at this time in your life, of looking at a great number of job groups (cluster) and jobs within each group
3. the need to match interests and values to job choices
4. the need to keep an open mind because of changing values and/or interests as a person gets older
5. of at least five career interests in five different clusters
6. how to prepare for specific jobs
7. how to find out about a job in the future
8. how to locate materials in the Career Resource Center

INSTRUCTIONS:

1. Read the information provided in this unit.
2. Complete each exercise as you come to it.
3. See the counselor or aide as often as you wish for help in this project.

PRE-TEST

1. Assume that there is nothing to hold you back, what career (job) would you choose above all others?
____
____
2. What career do you realistically see yourself as being able to attain?
____
____

WHAT TO LOOK FOR IN A JOB — QUESTIONS TO ASK YOURSELF:

1. Type of work
   a. On a day-to-day basis, what kind of work?
   b. Would the work always interest you or would you get bored after awhile?
   c. Is it the kind of work that would make the best use of your interests and abilities?
   d. Will there always be a demand for this kind of work?
   e. Is the work steady?
2. Personal needs
   a. What abilities and interest do you have to have in order to enter this kind of work? How do you know you have these abilities and interests?
   b. What type of personality do you need to do this job? Do you have it?
   c. What are the health and strength needs of this job? Do you have to be good looking, have good eyesight, a certain height or a certain weight?
3. Preparing for this work
   a. What subjects do you need to study?
   b. Other needs to consider:
      1. Union
      2. License
      3. Special exams
      4. Work experience
      5. Special school
4. "Moving Up"
   a. Are you promoted if you prove yourself?
   b. What does the U.S. Department of Labor say about the growth for this industry?

5. **Training**
   - a. Is there on-the-job training in this kind of work?
   - b. Is training paid for as a rule?
   - c. Have others in this field found it worthwhile to take further training?

6. **Salary**
   - a. Can you live on the wage paid in this field?
   - b. If you marry soon, will the salary be enough?
   - c. Do the wages depend heavily on day-to-day results, as they would for a commission salesman? If so, are you the kind of self-starter who can work that way, or do you need a regular paycheck?
   - d. What fringe benefits are there?
   - e. What may be your wage in this type of work five or ten years from now?
   - f. What is the cost of living in this kind of city you would be living in if you worked at this job?

7. **Needs**
   - a. Do you need a job with power?
   - b. Are you happy when you know you have done your best?
   - c. Do you have to have your efforts praised by others?
   - d. Would you like work in which you are always learning?
   - e. Are you keeping within your own talents and abilities?
   - f. Do you like to work with others? Does this job let you do that or would you be alone most of the time?
   - g. What are the good things and bad things about this kind of work?

TAKING A LOOK AT YOURSELF:

The following Values Appraisal Scale is reprinted from Activities for Succeeding in the World of Work with the permission of McKnight Publishing Company.

Below, and on the following pages, is a values scale. This scale lets you look at your values. You will read 100 statements:

If a statement is DEFINITELY TRUE, circle the 10;
If a statement is MOSTLY TRUE, circle the 7;
If you are UNDECIDED as to whether a statement is true or false, circle the 5;
If a statement is MOSTLY FALSE, circle the 3;
If a statement is DEFINITELY FALSE, circle the 0.

		Definitely true	Mostly true	Undecided	Mostly false	Definitely false
1.	I have a regular physical checkup by my doctor every year.	10	7	5	3	0
2.	I will regularly take my children to church services.	10	7	5	3	0
3.	I enjoy attending musical concerts.	10	7	5	3	0
4.	It is important to me to have a lot of friends.	10	7	5	3	0
5.	I donate to charities that I feel are worthwhile.	10	7	5	3	0
6.	I envy the way movie stars are recognized wherever they go.	10	7	5	3	0
7.	I would like to have enough money to retire by the time I am 50.	10	7	5	3	0
8.	I would rather spend an evening at home with my family than out with friends.	10	7	5	3	0
9.	I enjoy making decisions which involve other people.	10	7	5	3	0
10.	If I had the talent, I would like to write songs.	10	7	5	3	0
11.	I have a close relationship with either my mother or father.	10	7	5	3	0
12.	I have taught a Sunday school class or otherwise taken part in my church.	10	7	5	3	0
13.	I am willing to spend time helping another student who is having difficulty with his studies.	10	7	5	3	0

		Definitely true	Mostly true	Undecided	Mostly false	Definitely false
14.	Even at the same salary, I would rather be boss than just another worker.					
15.	I have a special appreciation for beautiful things.	10	7	5	3	0
16.	If I had the talent, I would like to appear regularly on television.	10	7	5	3	0
17.	I would like to counsel people and help them with their problems.	10	7	5	3	0
18.	I would enjoy associating with movie stars and other celebrities.	10	7	5	3	0
19.	I have a regular dental checkup at least once a year.	10	7	5	3	0
20.	I enjoy writing short stories.	10	7	5	3	0
21.	I would rather spend a summer working to earn money than go on a paid vacation.	10	7	5	3	0
22.	I like to attend parties.	10	7	5	3	0
23.	I think it would be fun to write a play for television.	10	7	5	3	0
24.	I believe in a God who answers prayers.	10	7	5	3	0
25.	I prefer being an officer rather than just a club member.	10	7	5	3	0
26.	I would spend my last $100 for needed dental work rather than for a week's vacation in my favorite resort.	10	7	5	3	0
27.	I enjoy giving presents to members of my family.	10	7	5	3	0
28.	If I were a teacher, I would rather teach poetry than mathematics.	10	7	5	3	0
29.	I often daydream about things that I would like to have if I had the money.					
30.	I enjoy giving parties.	10	7	5	3	0
31.	I am willing to write letters for old or sick people.	10	7	5	3	0
32.	It would be very satisfying to act in movies or television.	10	7	5	3	0
33.	When I am ill, I usually see or call a doctor.	10	7	5	3	0
34.	I believe that tithing (giving 1/10 of one's earnings to the church) is one's duty to God.	10	7	5	3	0
35.	I enjoy taking part in the discussion at the family dinner table.	10	7	5	3	0
36.	I enjoy visiting art museums.	10	7	5	3	0
37.	I like to write poetry.	10	7	5	3	0
38.	I like to be around other people most of the time.	10	7	5	3	0
39.	When with a friend, I like to be the one who decides what we will do or where we will go.	10	7	5	3	0
40.	Someday, I would like to live in a large, expensive house.	10	7	5	3	0
41.	I pray to God about my problems.	10	7	5	3	0
42.	If I knew a family which had no food for Christmas dinner, I would try to provide it.	10	7	5	3	0
43.	I like to spend holidays with my family.	10	7	5	3	0
44.	I like to see my name in print (newspapers)	10	7	5	3	0
45.	I would rather take a class in free hand drawing than a class in mathematics.					
46.	I do not like to spend an entire evening alone.	10	7	5	3	0
47.	If the salary were the same, I would rather be a school principal than a classroom teacher.	10	7	5	3	0
48.	I have expensive tastes.	10	7	5	3	0
49.	I can tell the differences between a really fine painting or drawing and an ordinary one.	10	7	5	3	0
50.	If I had regular headaches, I would consult a doctor even if aspirin seemed to lessen the pain.	10	7	5	3	0
51.	I have several very close friends.	10	7	5	3	0
52.	I expect to provide music lessons for my children.	10	7	5	3	0
53.	It is important that grace be said before meals.	10	7	5	3	0

	Definitely true	Mostly true	Undecided	Mostly false	Definitely false
54. I sometimes miss sleep to visit with late company.	10	7	5	3	0
55. I usually get at least 8 hours' sleep each night.	10	7	5	3	0
56. I like to design things.	10	7	5	3	0
57. I would like to be looked up to for my accomplishments.	10	7	5	3	0
58. I would feel a sense of satisfaction from nursing a sick person back to health.	10	7	5	3	0
59. I care what my parents think about the things I do.	10	7	5	3	0
60. I daydream about making a lot of money.	10	7	5	3	0
61. I like to be the chairman at meetings.	10	7	5	3	0
62. It is thrilling to come up with an original idea and put it to use.	10	7	5	3	0
63. I believe there is life after death.	10	7	5	3	0
64. I would welcome a person of another race as a neighbor.	10	7	5	3	0
65. If I were in the television field, I would rather be an actor than a script writer.	10	7	5	3	0
66. I enjoy decorating my room at home.	10	7	5	3	0
67. I enjoy a picnic with my family.	10	7	5	3	0
68. As an adult, I want to earn a much higher salary than the average worker.	10	7	5	3	0
69. I am careful to eat a balanced diet every day.	10	7	5	3	0
70. I often influence other students concerning the classes in which they enroll.	10	7	5	3	0
71. I would like to be written up in WHO's WHO.	10	7	5	3	0
72. I read the Bible or other religious writing regularly.	10	7	5	3	0
73. If I were in the clothing industry, I would enjoy creating new styles.	10	7	5	3	0
74. I look forward to an evening out with a group of friends.	10	7	5	3	0
75. When I am with a group of people, I like to be the one "in charge".	10	7	5	3	0
76. I dislike being financially dependent on others.	10	7	5	3	0
77. When a friend is in trouble, I feel I must comfort him/her.	10	7	5	3	0
78. I love my parents.	10	7	5	3	0
79. I never skip a meal.	10	7	5	3	0
80. I have a collection of phonograph records.	10	7	5	3	0
81. I have a particular friend with whom I discuss my personal problems.	10	7	5	3	0
82. I believe that God created man in his own image.	10	7	5	3	0
83. I enjoy buying clothes for members of my family.	10	7	5	3	0
84. I enjoy having people recognize me wherever I may be.	10	7	5	3	0
85. I like planning activities for others.	10	7	5	3	0
86. I do not smoke.	10	7	5	3	0
87. I feel good when I do things which help others.	10	7	5	3	0
88. Someday, I would like to write a novel (book).	10	7	5	3	0
89. I would put up with undesirable living conditions in order to work at a job that paid extremely well.	10	7	5	3	0
90. I belong to several clubs and organizations.	10	7	5	3	0
91. If I ask God for forgiveness, my sins are forgiven.	10	7	5	3	0
92. I would enjoy having my picture in the school yearbook more than it has been in the past.	10	7	5	3	0
93. I often organize group activities.	10	7	5	3	0
94. When I see a newly constructed building, I consider its beauty as much as its practical use.	10	7	5	3	0

	Definitely true	Mostly true	Undecided	Mostly false	Definitely false
95. I respect my mother and father.	10	7	5	3	0
96. I like to design or make things that have not been made before.	10	7	5	3	0
97. Some of the hobbies I would like to engage in are quite expensive.	10	7	5	3	0
98. I enjoy classical music.	10	7	5	3	0
99. I would never use potentially harmful drugs because of what it might do to my body.	10	7	5	3	0
100. I am kind to animals.	10	7	5	3	0

INVENTORY OF INTERESTS:

See the counselor or aide for the JOCA inventory. They will explain it to you and help you score it.

AFTER COMPLETING THE JOCA, ATTACH IT TO THE BACK OF THIS BOOKLET AND CONTINUE.

The tests that you have just taken do not tell you everything about yourself nor do they tell you your interests in all of the kinds of work. They simply show you the need to look at your needs and interests before choosing a job. Discuss what you have learned about yourself with the counselor or aide.

JOB SURVEY:

Now that you know that you must take a good look at yourself before you decide on a type of work, you should look into a number of jobs. You should try to find out all you can about at least 5 jobs in 10 different clusters. The reason you are learning about so many jobs is that you are still young and your job choice may change many times before you leave school.

1. Go to the bulletin board and look at the 15 clusters listed on the poster.
2. Read the comic book for each job cluster. They are located in the display rack on the east wall of the Center.
3. Fill out one worksheet for each job you want to learn more about. You may use any of the audio-visual materials in this room. If you need help, see the counselor or aide. **Remember**, you must fill out one job survey sheet for at least 5 jobs from 5 different clusters. There is a sample attached to this packet. Get more from the counselor or aide as you need them. Attach the completed worksheets to the back of this booklet.
4. When you finish, look at page one. Do you know the things you were supposed to learn from this unit. If not, see the counselor or aide for more help.
5. Arrange with the counselor or aide to visit someone on the job to learn even more about one particular job.

SUMMARY OF MY FINDINGS:

Considering what I have learned from this unit, I would like to have a job as (list 5 choices in order of preference):

1. ______________________________
2. ______________________________
3. ______________________________
4. ______________________________
5. ______________________________

POST TEST:

Refer to the PRE-TEST on page 1 that you completed earlier in this unit. Have your career choices changed or remained the same?

Why?

Have your counselor discuss your career survey packet results with you. He (she) will sign it and return it to you. Save it as it should contain some very valuable information for you.

NAME: ____________________

JOB SURVEY SHEET

1. Describe the job (what are your duties?) ____________________

2. What are the working hours:

Daily from ______ to ______ Average hours per week ______

Is there a night shift? ______ Can you work overtime? ______

3. What does the job pay?

Hourly? ______ Weekly? ______ Monthly? ______

4. What education do you need? ____________________

5. What training do you need? ____________________

6. What skills do you need? ____________________

7. Do you need experience? ____________________

8. Where are the jobs? ____________________

9. If you are promoted, what is the next job? ____________________

10. Where do you learn more about the job? ____________________

11. What equipment (tools) do you need? ____________________

12. How does this job meet your needs? ____________________

13. How does it not meet your needs? ____________________

14. What should you be doing while in high school (right now) to prepare for this job?

Career Strategy: **Media Modules**
Strategy Developer: Unknown
Student Career Development Level: Exploration
Purpose: To develop materials within the school that can be used by students for exploration of careers.
Learning Area: Classroom or Career Resource Center.
Procedures:

By using audio-visual equipment and materials there are many units that can be developed for use in the building that will provide specific information on a particular career. Methods used may be: (1) Taped interviews with persons in a number of different occupations talking about their career choice, training, lifestyle, etc. (2) 35mm slides about a career and a cassette tape describing the career. (3) Video-taped interviews with persons on the job, talking about their job and lifestyles. (4) 8mm movies about a number of careers.

Career Strategy: **Job Survival Skills**
Strategy Developer: Singer Company
Student Career Development Level: Job preparation
Purpose: To develop student's job getting and keeping skills.
Learning Area: Career Resource Center or classroom.
Procedures:

This program provides a comprehensive approach to developing student ability to get and keep a job. The program utilizes a combination of multi-media and simulation techniques to teach the student job survival skills. Work coordinators at all levels will find this kit to be a valuable aid.

Career Strategy: **Job Placement File**
Strategy Developer:
Student Career Development Level: Preparation
Purpose: To help students find employment and to develop better job searching skills.
Learning Area: Career Resource Center if possible.
Procedures:

Some possible methods of compiling full and part time job information are: (1) An arrangement with the State Employment Services for referring students or some partial use of their Job Bank service. (2) Telephone or letter survey of the community for jobs for the students. (3) Want-Ads (4) Job information from the on-the-job training coordinators of the jobs they can't fill. (5) Job tips from students that are working and know of additional openings at their place of employment.

Career Strategy: **Career Guidance Class**
Strategy Developer: Jeff Ferguson
Student Career Development Level: All levels
Purpose: To involve students in the process of career decision-making.
Learning Area: Career Resource Center
Procedures:

The Career Guidance Class provides a base upon which to build an 8 week unit for students planning their careers. The class provides an outline of each week's activities, including a list of objectives and outcomes for career development. The program is well organized and comprehensive, but also lends itself to being supplemented with other materials and activities. This program would be especially useful with seniors as a "Graduate 75" Class.

Career Strategy: **Vocational Information for Education and Work (VIEW).**
Strategy Developer: Vocational Education Department, State of Minnesota.
Student and Counselor
Career Development Level: Planning and Preparation.
Purpose: A quick and easy method of getting information about the Minnesota Area Technical-Vocational Institutes and the Course Descriptions at each Institute.
Learning Area: Career Resource Center
Procedures:

VIEW involves the collection, synthesis and presentation of two typed pages of occupational information on microfilm mounted in aperture cards. The next issue of VIEW may appear on microfiche. To view the information, students and counselors insert the cards into reader-printers. The student may obtain a print out copy of the information. VIEW supplies needed current information such as:

Job Duties
Work Environment
Earnings
Employment Outlook
Aptitudes, Interest, Temperament and Physical Abilities
Advancement Opportunities
Pre-entry Requirements

Career Strategy **Career Related Math**
Strategy Developer: Saint Paul Technical-Vocational Institute.
Student Career Development Level: Preparation
Purpose: To have each student acquire the math skills needed for training in a specific occupational area.
Learning Area: Classroom
Procedures:

As students identify their fields of vocational training, make them aware of the math skills needed to successfully complete the training. Also notify the student's math instructor about these career related math requirements. Math requirements for specific occupational training programs may be obtained from Saint Paul Area Technical-Vocational Institute.

How Do Community Resources Expand Career Resource Center Services?

Career Strategy:	Parental Involvement Program: Parents as Career Resources.
Strategy Developer:	Sybil Plessinger, Counselor at Battle Creek Jr. High, St. Paul.
Student Career Development Level:	Exploration
Purpose:	A positive attitude about obtaining information concerning careers is one of the goals in Career Education. As a vehicle of this, parents are utilized as one of the main resources at Battle Creek Junior High.
Learning Area:	Community

Procedure:

Parents are asked to fill out a form stating their occupation and whether or not they will be a resource for this job. (Form is included.) This becomes our reality list for contacting parents for help. During the summer a more extensive program is held whereby each parent is sent a card asking him/her to state his/her tax classification job and whether or not he/she would be a resource. This greatly added to our reality list.

After the list is created, each parent who volunteered is asked to come in from one to four hours to meet with individual classes and to explain, in general, their world of work, how they get involved in it, and what the expectations are from them. (Form sent is enclosed.) This is done on the seventh grade level.

The involvement at the seventh grade level has been tremendous. Parents are excited to come to school and share their work, and students are proud to have them and eager to learn. Follow-up letters are used when students write thank you letters, and a great interchange takes place.

Parents are also asked to be a resource by taking their child for one day and actually sharing in a day of work. Because this has not always been possible, the counselor works with the child, and he often goes to other parents in the district who have a job of the child's own interest. This becomes a real exploring time with the counselor in opportunities for careers. Parents have been most helpful and are willing to take additional children besides their own.

Our third major use of parents is a resource for intensive presentations for large group interests. For instance, a lazar ray presentation, an extensive slide study on pharmacy, a cosmetologist's tools, a physical therapist's charts are real life work situations. These make the work-a-day world come alive. Although busy, our parents are willing to help.

The fourth method of utilizing parents as a resource, is to arrange student tours to the parent's place of business. As a result, two tours have been arranged to a manufacturing company. Another company brought in a personnel person to explain an over-all view of the company to our ninth graders.

Parents in any school are a marvelous resource. It takes time and effort, but it is worthwhile. It not only involves the students in a world of work, but it involves the parents with the school, and that's good!

Battle Creek Junior High School
Guidance Department

Dear Parents:

We are asking you to be our first resource in the community.

In the near future, would you request that the school release your son or daughter so that he or she might attend work with you. Show him or her your company, the real world of work. This is an education that we in school cannot provide.

If you think you can participate in this program, please sign your name, address and the name of your child and return this form. We will arrange to excuse your child for the entire day or whatever part of it is convenient at some future date. This date is to be arranged through your child's core teacher.

PUPIL'S NAME ____________________

DATE TO BE EXCUSED____________________

Please return this to your child's core teacher. Thank you.

Sincerely,

Battle Creek Junior High School
2121 North Park Drive
St. Paul, Minnesota

Dear______________________________,

Thank you very much for your willingness to participate in our career program which we are doing for our seventh graders this spring.

The objectives of these sessions is not to get students to make career choices, but rather to help students realize that everyone works, that all useful work is honorable. We hope to acquaint them with the wide variety of occupations that exist.

Your company or business may have some materials they would furnish for you to bring along, perhaps some pamphlets. You might check with your public relations office. Here are the kinds of things we would like to hear about:

— What is your job title or description? Briefly describe what you do.

— What aptitudes or skills are important for your job?

— Do you have to deal with the public? If so, would you care to comment on this?

— If you are separated from people most of the time, working with things, how do you feel about that? Do you prefer not having to deal with the public or fellow workers?

— What do you consider the best point of your job? The worst?

— Is your job personally rewarding and fulfilling? Do you enjoy going to work? Do you recommend it as one of the alternatives students should consider?

— You may want to touch upon the financial aspect. Do you consider the pay to be adequate, very good, unsatisfactory?

— What is the outlook? Will this type of employment exist when these students enter the world of work?

— What changes in equipment, automation, personnel, training requirements have you experienced in the time you have been in this field?

— What training is required? (High School? Trade School? College? Apprenticeship? Graduate degrees?)

— Is the field difficult to enter? (Union membership, professional school entrance quotas, etc.)

— How does this type of career relate to what these students do now in school?

You will not be giving a formal presentation but will be talking with several children individually in an informal way. We want to acquaint our students with many careers.

You will share with another group of four or five career people in the presentation. We would like two presentations at this time: to one group at 11:30 and the other at 1:00. We would hope that you could stay for both presentations. If not convenient for both, either one would be appreciated. Please let us know by return mail which presentations you can attend.

Lunch will be available in the cafeteria at a nominal cost of 80¢. Please indicate on the return slip whether or not you will be here for lunch. On Wednesday lunch will be at 12:35; on Thursday lunch will be at 11:35.

We want to have a group session on **Wednesday** and **Thursday, March 20** and **March 21, 1975** at 11:30 and 1:00.

Sincerely,

☐ I cannot attend at this time.
☐ Attend Wednesday 11:30 only.
☐ Attend Wednesday 1:00 only.
☐ Attend both sessions on Wednesday, March 20, 1975.
☐ Attend Thursday 11:30 only.
☐ Attend Thursday 1:00 only.
☐ Attend both sessions on Thursday, March 21, 1975.
☐ Will eat lunch in the cafeteria.

Career Strategy: **Career Shadow Study**

Strategy Developer: **Roseville Public Schools**

Student Career Development Level: **Exploration**

Purpose: **To have students directly observe workers in the student's occupational areas of interest.**

Learning Area: **Community**

Procedures:

Survey students to determine which occupations hold the greatest interest. Develop a career resource talent bank of local people interested in sharing their occupational experience with students exploring careers. One technique to locate people to volunteer for Student Shadow Studies is through the use of the following letter and career list.

Roseville Area Schools
Independent School District No. 623

Dear Parent:

We are in the process of developing a list of resource persons from our community who would be available to occasionally make presentations to the students in our district, or Shadow Study visits (one student to visit you at work). We need willing members of the community to become involved in the educational process. Perhaps more than at any time in our history, the students in the schools need to be made aware of the educational requirements, the problems, the demands and the satisfactions associated with various careers. You have the educational planning and preparation.

We request that you allow us to put your name on a resource list we are developing in the district. This list will be made available to teachers so that as they plan their teaching units, they will have readily available resource people to enrich their instruction.

Enclosed you will find a list of the 300 most commonly held occupations to help you fill out the form below. Please choose the occupation most nearly matching your area of expertise and enter it in the space below. Should you have questions or suggestions, please contact ____________________, Project Director of Occupational Education.

My phone number is ____________________.

If you are willing to participate in this educational venture, please fill out the attached form and return it with your child.

Thank you.

Career Strategy: **V.E.G. 12 questions Career Interview**
Strategy Developer: Cal Daane
Student Career Development Level: Exploration
Purpose: To have students obtain specific first hand information from workers by having students conduct a structured interview.
Learning Area: Community work sites
Procedures:

The V.E.G. 12 questions — Career Interview is an excellent follow-up activity for students who have participated in a Vocational Exploration Group. The interview process increases the students involvement in job personalization by participating in 10 activities-worker requirements (number record, memory, tool/making chemical/elements, design, dexterity in finger/hand, directing others, selling products, and communicating with others) and job satisfaction 6 aspects as factored from three basic psychological needs: Status as need for feedback, self-esteem as self worth, and just the right amount of independence. The use of V.E.G.—twelve questions directs the students questioning. The materials for this career interview process are available from:

Studies of Urban Man, Inc.
P.O. Box 1039
Tempe, Arizona 85281
Package of 30 $12.00
Package of 100 $35.00

Career Strategy: **Vocational Centers**
Strategy Developer: Career Education Department, St. Paul Public Schools
Student Career Development Level: Exploration and Preparation
Purpose: To allow students to explore a possible post-secondary career
Learning Area: The Vocational Center
Procedure:

Students are allowed to attend a Vocational Center for one trimester on an exploratory basis. If the student feels this is an occupation he/she would like to pursue as a career it is then possible to continue at the center for another trimester or for skill attainment. In some cases the student would be prepared to enter the work force right after high school. Transportation is provided to and from the Vocational Center. The students attend on a half day basis.

Career Strategy: **"Hands On" Learning Opportunities**
Strategy Developer: St. Paul Public Schools
Student Career Development Level: Orientation and Exploration
Purpose: To allow students an opportunity to participate in programs that are not offered in their home school.
Learning Area: Educational Centers that are located throughout the city
Procedure:

Students in one of St. Paul's Public junior or senior high schools can join specialized "learing-by-doing" instructional programs available in no other schools. There they can learn with other young people from throughout the city. Because enrollment in the specialized learning centers is voluntary, students there will share interests with all others who come.

Learning Center Programs meet for half-day sessions throughout each 12 week trimester. Students register for them as part of their regular schedules. Re-registration for a different learning center may be made each 12 weeks. Transportation to learning centers and back to your home school is provided by the school district. Senior high students will receive achievement grades and credits for their learning center activities.

Junior High Learning Centers:
Performing Arts, Art, Automotive, and Science
Senior High Learning Centers:
Performing Arts, Computer, Transportation, Horticulture, New City School; Mass Media, Environment, Urban Studies, Peoples Coop and Business Careers.

Career Strategy: **Walk-in Counseling and Career Exploration**
Strategy Developer: St. Paul Technical-Vocational Institute
Student Career Development Level: Exploration
Purpose: Career Counseling and Exploration
Learning Area: Career Information Center, St. Paul Technical-Vocational Institute
Procedure:

Each morning from 7:45 a.m. to noon there is a counselor available in the Career Information Center for any person needing information. An appointment is not needed. There is counseling available each day from 7:45 a.m. to 9:00 p.m. by appointment in the Guidance Office also.

Career Strategy: **Summer Exploratory Program**
Strategy Developer: St. Paul Technical-Vocational Institute
Student Career Development Level: Exploration
Purpose: For high school seniors and adults who are undecided about their career choice
Learning Area: St. Paul Technical-Vocational Institute
Procedure:

A summer exploratory program for high school seniors and adults undecided in their career goals is held in the mornings from the middle of June through the middle of July. Vocational counseling is a part of the program also. If the individual does make a decision he/she may then apply to the institute for a regular training program.

Career Strategy: **Group Counseling and Orientation**
Strategy Developer: St. Paul Technical-Vocational Institute
Student Career Development Level: Orientation and Exploratory
Purpose: Career group counseling and orientation
Learning Area: Career Information Center
Procedure:

Open group sessions are held each Monday at 1:00 p.m. and each Wednesday at 7:00 p.m. Applications may be made at this time as well as arrangements for personal interviews. Admission procedures and financial matters are discussed also.

Career Strategy: **Technical Career Day**
Strategy Developer: St. Paul Technical-Vocational Institute
Student Career Development Level: Exploration
Purpose: To explore some of the Technical Training Opportunities available to the student
Learning Area: St. Paul Technical-Vocational Institute

Procedure:
The students are given a brief overview of technical careers in the auditorium before they are divided into groups to visit the classrooms and labs. The students also have a chance to talk with employers, instructors, students, and graduates.

The Programs Involved are:
Chemical Technology, Civil Technology, Construction Drafting, Design Technology, Electronic Technology

Career Strategy: **Explorer Career Program**
Strategy Developer: Exploring Division of the Indianhead Council, B.S.A. in cooperation with area business and industry and the high schools, or other Regional Offices
Student Career Development Level: Orientation, exploration, planning and preparation
Purpose: To provide hands-on experiences or guest speakers, as well as the Career Interest Survey for secondary students in areas that they have career interests.
Learning Areas: Public Services buildings, private industry and business establishments, schools, the out-of-doors, etc.

53

Procedures:
The master control board for booking Career Resource people, joining the Career Clubs, and booking films is housed and staffed at the Indianhead Council Service Center in St. Paul.

At the present time 18 schools are being provided the service by 346 Community Resource People providing career information on more than 50 Technical and Professional levels.

Coordinated Efforts:
1) Career Survey now standardized and state-wide; provided without cost 2) Explorer Career Club provides students an awareness of occupational choice through presentations of community resource personnel who have expertise in a career, 3) Students who wish to further explore a career field may "spin-off" to a Special Interest Explorer Post in the community for an in-depth, hands-on, year-long experience. Sophomores, juniors and seniors from all schools are invited, by interest selection, to participate in this field, 4) The Guidance Counselors are provided copies of the results of the Career Interest Survey, plus statistics, plus a key of DOT and Occupational Handbook codes to use in directing students using the Career Club Program to the school Career Resource Center, 5) Statistics are shared with Dr. Berger, Harold Lehto, and Dr. Phillips of the St. Paul System; and with the Directors of Guidance or Directors of Community Education of every other system surveyed, 6) Names of students who wish further hands-on experiences will be shared with the Career Education Department for possible invitation to Career Learning Centers.

14

Career Strategy: **People To People**
Strategy Developers: St. Paul Area Chamber of Commerce and the St. Paul Public School's Career Education Department
Student Career Development Level: Orientation and Exploration
Purpose: A method of helping teachers to obtain community resource people to speak to students about careers in business and industry.
Learning Area: Classrooms

53

Procedures:
Teachers are to review the information in the available resource personnel folder. Then complete the People to People order form and mail to the St. Paul Area Chamber of Commerce. The Chamber then arranges for the speaker at the request time and place.

How Can A District Career Resource Center Coordinate Your Services?

One pattern that is emerging for resource center organization and development in some school districts is the centralized Career Resource Center. The trend has begun from the efforts of Career Specialists to effectively store, disseminate and utilize the materials of highest quality, as well as economize by sharing resources and not duplicate purchases. The North Saint Paul Public School System and the Saint Paul Public Schools are districts which have developed and implemented this technique to best advantage. In North Saint Paul, director of Career Education, George Von Drashek has used a two year phase-in system to develop and implement the District Career Resource Center. During the first year of operation, resource persons on the staff of each of the districts schools were identified to stimulate interest and facilitate utilization of career materials and programs. Each of these persons was reimbursed for this extra service. During the second year, the monies were re-directed toward the purchase of new materials that were selected by district staff. The leadership for the development of career programs during the second year was shifted from the career resource persons to the building principals. During both of the first two years of the project a Career Technician was used to assist the schools in the coordination and utilization of career resource. Two career references developed in the North Saint Paul Schools that are utilized by the Career Technician, working in cooperation with the schools are:

1. **Chart A Course To Community Resources** Revised
   (Reference for locating field experiences and speakers)
2. **Career Education Resource Inventory**
   (Complete list of materials available from the District Career Resource Center) NOTE: The Arizona Career Education Matrix was used to categorize the materials

One medium used to keep all educators informed of current happenings in Career Education in the North Saint Paul Schools has been the publication, **Contact: A Newsletter for and about Career Education**, in District No. 622 which is issued four or five times yearly. Three themes common to this newsletter include:

1. New materials available from the Career Resource Center
2. Articles that can be requested from numerous sources
3. Happenings in Career Education in the district

In the Saint Paul Public School's district Career Education Resource Center a different technique is being developed to store, disseminate and use career materials called "The Folder Concept". The information that follows describes the folder concept including a listing of the outline format which is used to organize each folder.

Career Education concepts will be implemented through materials designed to be infused into existing curricula (units, texts, audio-visuals, etc.). Materials can be requested by subject area or career area focus.

Contents in a Career Area Folder will be in the form of resource materials that can be infused into a learning situation when relevant. Modules or units relating to a particular occupation may be included in the folder. These may be infused into subject matter, presented as a lesson, or used as an individualized independent study experience. The materials within the folder will range from kindergarten through high school. These materials will be organized into levels that can be introduced to students appropriate to their needs.

The teacher is encouraged to use creativity in the implementation of career folder materials. These materials may augment interaction with community resource persons.

If you would like additional information from a curriculum writer, consultant, media specialist or community resource person, please contact:

Career Education Resource Center
Victoria School
Victoria and Idaho
St. Paul, Minnesota 55117
Telephone: 488-6761

If you would like to develop any additional materials related to the folder, or if you have any materials suitable to include in the Career Area Folder, please contact the Career Education Resource Center.

Folder Format

- I. Subject Area/Career Area Folder
  - A. Related Occupations

How Do You Evaluate A Career Resource Center's Effectiveness?

When evaluating the effectiveness of a Career Resource Center, it is necessary to assess both materials and services. The evaluative procedures and forms provided in this section are suggestive of viable approaches that can be used to determine the effectiveness of your efforts.

Resources can be divided into two parts:

1. Human
2. Non-human

This distinction aids those attempting to assess the relative effectiveness of both aspects of your Career Information Delivery System. The form below represents a procedure effectively used by the Roseville Public Schools to determine the quality of resource people in their career program. Teachers should be strongly encouraged to evaluate resource people so that only knowledgeable and enthusiastic people are used as models for students to emulate.

Independent School District 623 Roseville Area Schools

RESOURCE USE CARD
CONFIDENTIAL

Resource Evaluation

This evaluation should be filled out each time a resource is used. Please send the completed evaluation to the Director of Vocational Education.

School ________________________ Grade __________ Date __________

Person ________________________ Topic ____________________

Presentation made at school __________ Presentation away from school __________

Do you recommend this resource person for future use in District 623?

1. __________ I recommend him/her.

How would you rate this resource person for the grade level he/she worked today?

2. __________ Excellent __________ Good __________ Fair __________ Poor
3. The resource person would strengthen his presentation if the following adjustments, changes, adaptations, etc., were made:

____

____

____

____

4. Comments: ____

____

____

____

____

Teacher ________________________ Grade __________

Non-Human resources should also be evaluated on a continuous basis to maintain materials of highest learning potential. The Career Resource Check-Out Card below provides one method by which the continuous evaluation of materials can be facilitated.

A second dimension the Career Resource Center to be evaluated of equal importance are services. There are two primary groups of people who can best assess the effectiveness of these services; they are students and teachers. Both of the forms:

1. Teacher Survey, Guidance Department, St. Paul Public Schools, and
2. Student Survey, Mechanic Arts Career Resource Center and Counselor Aide Project

have been field tested at Mechanic Arts High School under the supervision of Dennis Niebling. They provide a method by which to obtain information, which can be used to improve the delivery of Career Resource Center services.

TEACHER SURVEY

Guidance Department

Saint Paul Public Schools

The purpose of the Career Resource Center this year has been a) to provide students with resources, personalized help and information in vocational and educational exploration, and b) to provide materials and services to teachers to aid in students' vocational planning and in integrating career development concepts into subjects. Your cooperation in giving us feedback on your use of the CRC will help us to plan better for next year. Thank you.

Please circle the items which apply to you.

I have been in the CRC.

never   occasionally   often

I have used the CRC volunteers for help or materials.

never   two or three times   more than three times

I have referred students to the CRC.

once   two or three times   often

I have taken a class to the CRC.

never   once   twice   more than twice

I feel volunteers in the CRC are

very helpful   helpful   not helpful

I feel a career development program in the schools is

very important   needed   not needed

I believe that the help students receive in vocational exploration is

The Minnesota Research Coordinating Unit (RCU) for Vocational Education is funded jointly by the State Department of Education, Vocational Division and the University of Minnesota. The major purposes of the Minnesota RCU are to

(1) Stimulate, coordinate and facilitate Research and Development efforts in the State.

(2) Provide training for producers and consumers of research.

(3) Disseminate research and instructional materials dealing with career and vocational education.

(4) Conduct long-range programmatic research on problems which are of high priority in the State.

To accomplish these purposes the Minnesota RCU provides the following services, free of charge, to educators in the State:

(1) Distribute information concerning the availability of State and Federal funds for R & D projects.

(2) Provide technical consultation on (a) writing proposals, (b) securing information about educational problems or materials, (c) evaluating educational programs and (d) other problems which are of concern to educators.

(3) Provide access to and disseminate research and instructional materials which include: (a) computer searches of the RCU Library, (b) book check out services, (c) copies of RCU publications, (d) hard copy duplication services, (e) microfiche duplication services, (f) microfiche and microfilm reader services and (g) technical consultation concerning resource materials.

(4) Provide educators with procedures and validated instruments to: (a) conduct school locally based follow-up of secondary students, (b) conduct secondary school placement service, (c) conduct a vocational needs assessment of adults, (d) conduct evaluations of career education programs including cognitive and affective assessments and (e) teach job and education seeking skills to secondary school students and (e) other transportable instruments and procedures designed to improve the quality of career and vocational education.

Further study of your efforts to implement a Career Resource Center can be significantly aided by acquiring **Planning and Evaluating Developmental Projects in Career Education**, written and developed by Brandon B. Smith and Roy A. Thomas of the Minnesota Research Coordinating unit for Vocational Education. A copy of this career evaluation system may be obtained by writing:

Brandon B. Smith or George H. Copa
Minnesota Research Coordinating Unit
for Vocational Education
445 Peik Hall
University of Minnesota
Minneapolis, Minnesota 55455
Telephone: (612) 373-3838

The pursuit of obtaining evaluative data will be rewarded by having concrete justification for the continuation and improvement of a Career Resource Center!

METHODS OF CAREER RESOURCE SELECTION, ORGANIZATION AND UTILIZATION

HOW DO YOU EVALUATE CAREER RESOURCES?

The process of development reflected by the heading of this section is vital to the establishment of a Career Resource Center. Adherence to a process oriented system, will assure Career Resource Center developers that their Center, as with human beings, will not only survive birth, but also live to a ripe old age. With the tremendous proliferation of resources, both past, present, and future being made available, it is the practicality of order and economy that dictates the search for guidelines that will serve to chart a logical course of getting started and maintaining a Career Resource Center. The most significant single aid to accomplishing this task is the article "Identifying, Organizing and Using Resources in a Career Development Program" written as an unpublished paper by L. Sunny Hansen. The body of this section will be developed basicly from this paper, with appropriate supplements being added from other more recently published sources. The writing style and message of Hansen, effectively communicates the concerns of the authors of this guide and will be changed only when adherence to the guide format is necessary. . . . Resources and materials for career development are not ends but means. If the objectives of a career development curriculum are to be realized in a pervasive, comprehensive, sequential program, ways must be found to identify, organize, make accessible, and disseminate all types of materials which facilitate student career development, to identify human and non-human resources, and to find ways to relate the resources, materials, multi-media, and programs to individual vocational exploration and to classroom projects. While information is not the only important aspect of career exploration and decision-making, it is a very important one. And acquainting students and professionals with the vast resources and information available could do much to facilitate the development of individual potentialities, the positive self-concept, the sense of control over one's life, and the sense of purpose which are a part of career development goals.

There are a number of considerations to be kept in mind in selecting and utilizing resources. General principles of program design apply to career resource programs as to other aspects of career development. Selection of resources should be based on: (1) the nature of the population(s) being served, (2) student characteristics and career needs, (3) objectives of the program, (4) the setting in which it is to become operational, methods to be utilized, and (5) the budget available. To the extent now, media research should be examined in the selection of materials for a given population, setting or level. Briefly an organizer of career information resources might ask the following types of questions:

1. Who will be the major user—student, parent, or professional (teachers, counselors, elementary, junior high, senior high, post-high)?
2. What ability, interest, and developmental levels need to be met?
3. What kind of variety is necessary in types of information (occupational, manpower trends, vocational training, college, financial assistance, employment, draft and alternatives, decision process, marriage and family, etc.)?
4. What kind of variety is necessary, desirable, and possible in media (kits, films, filmstrips, cassettes, files, books, monograph, etc.)?
5. What training will be necessary for the users and who will provide it?
6. How will the resources be publicized, accessed, and disseminated?
7. How will the career development resources relate to other school and community resources (agencies, subject resource centers, etc.)?
8. How will the materials and resources be evaluated?

Finding answers to some of these key questions is essential to effective resource utilization and to implementation of a career development curriculum . . ."

One suggestion to help answer question no. 8 above is provided by using the following evaluation instruments, included in the article "How to Evaluate Career Information Materials" written by Stephen G. Weinrach, September 1974 issue of **The School Counselor.**

Two additional references that provide on-going evaluation of career films are the **National Vocational Guidance Association Journal** and **Inform.**

Information about general and specific criteria for evaluation of career information is also provided in Weinrach's article. An "Assessment of Career Education Curriculum Materials" provides an alternative method of evaluating career materials can be obtained from:

Dr. LaVerne M. Fadale
New York State College of Agriculture
and Life Sciences
Cornell University
Department of Education
Stone Hall
Ithaca, N. Y. 14850

Also available from the National Vocational Guidance Association is the recently revised "Guidelines for the Preparation and Evaluation of Career Information Media."

National Vocational Guidance Association
1607 New Hampshire Avenue N.W.
Washington D.C. 20009

These resources provide ample information and guidelines for developing an evaluation system that will be appropriate to each educational setting. ". . . While the potentials of materials and resources as aids to facilitating career development seem abundant, there is also room for caution. One of the cautions is in relation to gimmickry and panaceas. There has been a tremendous spurt of commercial materials on the educational market in the last few years, not all of them sound. One needs to evaluate carefully the materials in terms of accuracy, recency, readability, useability, appeal, comprehensiveness, and the like.

1. Do they really do what they claim to do? Do they have a valid content or conceptual base?
2. Are they appropriate for the level intended?
3. Do they have a significant impact on vocational exploration or placement? Or are they gimmicks which don't really pay off but leave the user disappointed and with the same information deficit?
4. Do they truly contribute to the larger goals of the career development program?
5. Are their goals consistent with that known about career development in the 1970's?

Perhaps an even greater caution is in the need for finding the appropriate vehicle or mechanisms for using the career development resources, materials, and programs. No teacher, counselor, vocational educator, or para-professional wants to waste time in identifying, organizing, and classifying a vast array of materials which essentially go unused. How to get the career development materials and resources used and used in meaningful ways becomes autonomous individuals controlling their own destiny, they will need ways to develop this independence in use of resources in planning and decision-making and not be spoon-fed every step of the way. They will need to learn to identify those resources most appropriate to their own goals but also appropriate to their own learning styles. The use of resources should be related in some way to indices of vocational maturity — the awareness and concern with choice, acceptance of responsibility for choice making and planning, the specificity of information used in job-seeking and planning, and conceptions of the decision process. Any of the factors identified by Super, Crites, Gribbons and Lohnes or others might serve as a basis for examining the relationship between use of resources and vocational maturity. In this age of accountability, spending large amounts of money on media of questionable value which go unused is difficult to justify.

The career needs of the populations served suggest another type of caution. The resources available need to be geared to the needs of all subcultures within the student population — to communicate the idea that career development is for all (not just the college-bound, for example) and that the resource and career information services are available to all. *Thus the program needs to attend to all kinds of diversity in users — resources for Blacks, Chicanos, Indians, white Americans; for the special needs of girls; for the early-committed junior high student; for the uncommitted senior who is undecided; for the employment-bound; for the college bound; for the immediate job seeker as well as the long-range planner; for all kinds of planners and decision makers, including those who decide not to decide . . .*" (italics added by authors)

The results of a recent report, The Final Report: Methods for Enhancing the Military Potential of Selected Manpower Segments reported in the article "Students Polled on Job Attitudes — Survey Report Reveals Occupational Values/Communications Patterns" published in the Guidepost, a newsletter of the American Personnel and Guidance Association, October 12th, 1974 issue provides substantial data to support Hansen's concern for the diverse career needs of our youth today. The purpose of the study was to determine the occupational values and communication patterns of a representative sample of 310 high school seniors in Baltimore, Maryland. Information obtained from this study is arranged according to sex, career orientation — college bound vs. non-college bound and race.

A summary of the findings of this report relating to sources of career information is provided below. Students were asked about the personal and mass media sources from which they received job information and the amount of influence it had. The findings included:

Hours of Job Information Exposure (3 highest sources)

1. Mother
2. Radio
3. Television

Sources of Job Information Preferences (All groups)

1. Newspaper
2. Mother
3. Teacher

(Non-College bound women)

1. Radio
2. Television
3. Adult friends

Whites, especially college bound

1. **Brochures**
2. **Billboards**

(Depend more on mass media than Blacks)

Source of Job Influences

All Groups

1. School Counselor (Particularly important for Black students)
2. Teacher
3. Mother

College Bound

More influenced from printed media

Black Students

1. Blacks place higher value on personal sources including:
   School counselor
   Peers
   Adult friends
2. Electronic media is more important strongest

Parental Influence

1. Male College Bound
2. Female Non-college Bound

The results of this report have significant implication for the development on a Career Resource Center which include:

1. Types of Media obtained.
2. Focus of human involvement, emphasizing sources of greatest influence i.e. developing a program to inform mothers about occupational information as they have the greatest exposure to students.

Career Resource Center developers are encouraged to obtain the complete report from:

National Technical Information Service
5285 Port Royal
Spring Field, Virginia 22151
Report No. AFOSR TR741369

Additional information about the project may be obtained from:

Vernon B. Morris Jr.
Principal Project Investigator
Westinghouse Health Systems
5575 Sterrett Place
Columbia, Maryland 21044

Information obtained from these sources will provide material that can be adapted for conducting a local occupational survey, the results of which could be used to assist in designing a locally relevant career information system.

ORGANIZING CAREER INFORMATION— WHERE DO YOU BEGIN?

". . . There are many ways to categorize resources and materials. Typical categories used are (1) type of publication or media-monograph, brief, subscription service, posters, charts, audio visual, etc. — and (2) source of information — government, commercial, professional and industrial organizations, private agencies and companies, educational institutions, periodicals, bibliographies or indexes. Thompson's way to classify resources listed in a previous section, What A Career Resource Center Can Do, relates the various types of media to the nature of the interaction between the individual and the materials and to the directness and indirectness of the experience. He identifies 10 types of occupational information (which embrace both World of Work and Life as a Worker). An interesting aspect of Thompson's scheme is that the media at the bottom are more pre-structured and fixed, those at the top more individualized. The five at the bottom are also less direct, i.e. they provide information **about** rather than **direct contact with** the work world. Between the person and the real world is a mediating agent — book, film, a computer, a person. But the top six provide various degrees of direct experience in the work situation. Thompson hypothesizes in "The Spectrum of Occupational Information Media" that the closer the occupational information is to the real situation and the more it allows an individual to adapt it to his own particular use and needs, "the more likely it is to be 'internalized' and to have an effect upon his vocational development and career progress". He concludes by citing the need for not only a lot of creative media but also careful research in testing the effectiveness and applicability at various stages of career development. Joseph Samler in his article "Psycho-social Aspects of Work: A critique of Occupational Literature" has been critical of the focus of much occupational information on what he calls Economic Man rather than on Psychological Man. He argues for a clearer presentation in occupational literature of psycho-social aspects of work — what it means in the life and life style of the worker and not only external information about trends, pay and working hours. Another way to organize resources for a career development curriculum would be according to goals or objectives. For example, it could be helpful to have a classification of resources, materials, and programs which are geared to (1) developing a sense of planfulness; (2) improving self-concept; (3) upgrading aspirations; (4) providing a sense of involvement and community relatedness; (5) providing role models; (6) motivation exploration; (7) providing "hands on" experience; (8) accelerating vocational maturity; (9) orienting to the World of Work and the like. An alternative way to explore the question of organizing resources is to ask further questions about career information resources and programs and how they fit into the career development exploration process. Some theoretical and operational questions which might be posed are as follows:

1. What kinds of information and resources do students in a particular school and at different developmental levels need? What kinds of information are most important?
2. What kinds of information and resources exist and how do students have access to them?

3. How do students know what they need and when they need it? How do they obtain it and use it in their own self exploration, work exploration, and decision-making?
4. How can resources and information about self and work be used to open up possibilities for students rather than prematurely narrowing down, slotting, or channeling?
5. How can the huge occupational world be brought down to manageable size so students, parents, teachers, and counselors have a conceptual map or framework within which to start examining possibilities?
6. What are some of the most effective media and resources through which students at different levels and with different needs can be assisted in their career exploration?
7. What are the respective contributions of man and machine, the human versus non-human media which can be used to facilitate career development? What combination of human-material resources can be used effectively?
8. What are the main organizing, administering, and staffing patterns in which the goals of career development can be realized through utilization of resources and media?
9. What kinds of professional and para-professional schools and community resources can be found to assist in the career development program?

Circle and others in their publication, **The Career Information Service: A Guide to its Development and Use** described a comprehensive four-pronged "Career Information Program" organized and implemented in the Newton, Massachusetts, Public Schools. Their model includes a Career Information Library, a Job Placement Service, a Follow-up Service, and a Career Guidance Resource Center. They offer the following "Guidelines for Developing a Career Information Library":

Develop an adequate rationale or statement of purpose for introducing the service to your school.
Responsibility for coordination the service should be given to one person
Funds must be budgeted for career materials on a regular basis
Establish criteria for acquiring materials
Locate reliable sources of information
Develop a workable classification and storage system
Utilized good business management practices
Establish Open Communications Networks
Location may determine effectiveness
Work closely with existing school library services
Keep career information up-to-date
Keep administrative rules and regulations to a minimum

The Newton Project seems to be a well-designed and evaluated model, and the project report itself could be a valuable resource for any system wishing to organize a Career Information Service.

The idea of organizing resources into some kind of information center is not particularly new. There are many different models around the country: the Regional Career Information Center and Project VIEW in San Diego; the Career Information Center in Herman Bidder Junior High School, Bronx, New York; the Career Information Service in Newton, Massachusetts, just described; the Career Resource Center of Northeastern University in Boston; the National Career Information Center in Washington D.C. . . ."

The following is a list of a few of the local Career Resource Centers that you may want to visit before setting up a center in your building:

Armstrong Senior High School — Robbinsdale
Mrs. Strandberg (Aide) 546-4401

Career Study Center II — St. Paul
Steve Sweetland (Counselor) 298-5000

Como Park Junior High School — St. Paul
Harold Hebl (Counselor) 488-2538

Cooper Senior High School — Robbinsdale
Arlene Breckenridge (Counselor) 533-1691

Hosterman Junior High School — Robbinsdale
Betty Newirth (Counselor) 533-2411

Marshall University High School — Minneapolis
Mrs. Silman (Counselor) 378-1824

Mechanic Arts High School — St. Paul
Dennis Niebeling (Counselor) 227-4143

South High School — Minneapolis
Cato McKinnie (Counselor) 729-8341
Title of Center — "Career Services Center"

West High School — Minneapolis
Sara Moore (Counselor) 827-2917

HOW DO YOU GET CAREER INFORMATION TO THE STUDENT?

In reviewing Hansen's paper, one common problem that universally confronts those organizing Career Resource Centers is the question of how to develop a method for easily accessing career information from the center by those it serves. Most students as well as school staff are not familiar with occupational classification systems such as the Dictionary of Occupational (D.O.T.) system. Therefore, it is important to develop a simple system that allows all career resource center users to easily gain the information they seek. The description of the following system was developed keeping the objective of simplicity in mind. It is a modification of the **Career Planning Guide** designed by Dr. Cliff E. Heilling and Rodney W. Hale.

This Career Information Guide (a system for accessing career information) is organized alphabetically using the 15 United States Office of Education Career Education Clusters as major occupational information classification categories. They include the following:

Code	Clusters
01	Agri-business and Natural Resources
02	Business and Office
03	Communications and Media
04	Construction
05	Consumer and Homemaking Related
06	Environmental Control
07	Fine Arts and Humanities
08	Health
09	Hospitality and Recreation
010	Manufacturing
011	Marine Science
012	Marketing and Distribution
013	Personal Services
014	Public Services
015	Transportation

The educational information section is also organized alphabetically as follows:

Code	Categories
A	Apprenticeship
C	Colleges
H	Hospitals
O	Others
P	Private Schools
V	Vocational-Technical Schools

This classification system becomes operationalized by:

I. Providing Career Information Guides to all potential users (students and staff).

II. Utilizing Career Information Request Forms.

III. Organizing the Career Resource Center Materials (including an occupational file) with this system.

IV. Providing Career Personnel trained in Accessing Requested Information.

The Career Information Guide which follows serves as a directory to easily identify information needed.

Occupational Information

CAREER INFORMATION GUIDE

Directions:

This is a list of over 500 Career Areas organized into 15 categories. It includes ranges of the most commonly held occupations in the United States. This list represents occupations requiring all levels of education and training.

Read the directions carefully. This information will help you in your career planning by providing you with: (1) a breakdown of these occupations into related jobs, (2) sources of information for further study, (3) sources of educational and training requirements and post high school institutions offering courses of study in these areas.

Specific Steps:

1. Read over all of the titles Occupational Information (Note: Start with highest interest categories first) Education Information.
2. Select those occupations and educational institutions that interest you.
3. Bring your Career Information Request Form to the Career Resource Center and you will receive information relating to Career Planning items 1 and 2 above.

01-AGRI-BUSINESS AND NATURAL RESOURCES

1. Agricultural Electrification Technology
2. Agricultural Engineering
3. Agricultural Mechanics
4. Agricultural Mechanics Skills
5. Agricultural Machinery and Equipment Technology
6. Agricultural Power and Machinery
7. Agricultural Production
8. Agricultural Products (Processing, Inspection and Marketing)
9. Agricultural Related Technology
10. Agricultural Resources (Conservation, Utilization and Services)
11. Agricultural Science Occupations
12. Agricultural Structures and Conveniences
13. Agricultural Supplies Services
14. Agricultural Technology
15. Agricultural Technology, Other
16. Agriculture Chemicals
17. Agriculture Construction and Maintenance
18. Agriculture, Forestry and Fishing, Industry Managers and Officials
19. Agriculture, Other
20. Air
21. Animal Science
22. Arboriculture
23. Commercial Fishery Occupations
24. Dairy Products
25. Farm Business Management
26. Farm Mechanics
27. Feeds
28. Fertilizers (Plant Food)
29. Fish (Including Farms and Hatcheries)
30. Floriculture
31. Floristry
32. Food Products
33. Forestry, Other
34. Forestry Protection
35. Forestry (Production, Processing, Management, Marketing and Services)
36. Forestry Technology
37. Geology Occupations
38. Greenhouse Operations and Management
39. Logging (Harvesting and Transporting)
40. Mining Industry Managers and Officials
41. Mining and Petroleum Engineering
42. Nonfood Products
43. Nursery Operation and Management
44. Ornamental Horticulture (Production, Processing, Marketing and Services)
45. Petroleum
46. Petroleum Technology
47. Plant Science

02-BUSINESS AND OFFICE

1. Accountants
2. Accountants and Auditors
3. Accounting and Computing Occupations
4. Administrative Assistants
5. Administrative Specialization Occupations
6. Agents and Appraisers
7. Bookkeepers
8. Budget Management Analysts
9. Budget and Management Analysts Occupations
10. Business Data Processing Systems Occupations
11. Cashiers
12. Clerical and Office Supervisors
13. Clerk-Typists
14. Clothing Management, Production and Services
15. Computer and Console Operators
16. Computer Programmer
17. Correspondence Clerks
18. Data-Methods and System-Procedures Analysts
19. Duplicating Machine Operators
20. Economics Occupations
21. Executive Secretary
22. File Clerks
23. Filing, Office Machines and General Office Clerical Occupations
24. Finance and Credit
25. Finance, Insurance and Real Estate Managers and Officials
26. Foremanship, Supervision and Management Development
27. General Office Clerks
28. Insurance
29. Key Punch and Coding Equipment Operators
30. Machine Operators: Billing, Bookkeeping and Computing
31. Miscellaneous Managers and Officials
32. Office Managers and Chief Clerks
33. Office Occupations, Other
34. Office – Related Technology
35. Peripheral Equipment Operators
36. Personnel Assistants
37. Personnel and Training Administration Occupations
38. Personnel, Training and Related Occupations
39. Programmers
40. Public Relations Management Occupations
41. Purchasing Management Occupations
42. Quality Control Clerks
43. Real Estate
44. Receptionists and Information Clerks
45. Scientific Data Processing
46. Secretaries
47. Service Industry Managers and Officials
48. Stenographers
49. Stenographic, Secretarial and Related Occupations
50. Stock and Inventory Clerks
51. Supervisory and Administrative Management Occupations
52. Systems Analysis
53. Systems Analysis Technology
54. Teller
55. Transportation, Communication, Utilities, Industry Managers and Officials
56. Typists
57. Typing and Related Occupations

03-COMMUNICATION AND MEDIA

1. Bookbinding
2. Commercial Art Occupations
3. Commercial Artists Occupations
4. Commercial Photography Occupations
5. Communications
6. Communications Systems Clerks and Operators
7. Composition, Make-up and Typesetting
8. Freelance Writing
9. Graphic Arts Occupations
10. Information Communication Occupations
11. Interpreters and Translators
12. Interviewers and Test Technicians
13. Librarians
14. Lithography, Photography and Platemaking
15. Mail and Postal Clerk
16. Mail Preparing and Mail-Handling Machine Operators
17. Materials Support Occupations (Transporting, Storing and Recording)
18. Messengers and Office Boys and Girls
19. Museum, Library and Archival Sciences Occupations
20. Photoengraving
21. Photographic Laboratory and Darkroom Operation
22. Photography Occupations
23. Printers and Related Occupations
24. Printing Press Occupations
25. Radio Operators
26. Radio/Television
27. Silk Screen and Printing
28. Sound Recording, Transcribing, Reproduction Occupations
29. Writers and Editors, Motion Pictures, Radio and Television
30. Writers and Editors, Publishers
31. Writing Occupations

04-CONSTRUCTION AND REPAIR

1. Air Conditioning
2. Appliance Repair
3. Architectural Occupations
4. Architectural Technology (Building Construction)
5. Architecture and Engineering (Occupations in)
6. Blueprint Reading
7. Business Machine Maintenance
8. Brazing and Soldering Occupations
9. Carpentry
10. Construction Industry Managers and Officials
11. Construction and Maintenance Trades
12. Cooling
13. Designs
14. Drafting
15. Dry-wall Installation
16. Electric Welding
17. Electrical Appliances
18. Gas Welding
19. General Construction
20. Glazing
21. Hardware, Building Materials, Farm and Garden Supplies and Equipment
22. Heating
23. Heavy Equipment (Construction)
24. Installation, Operation and Maintenance of Reactors
25. Instrument Maintenance and Repair
26. Lineman
27. Machine Shop
28. Masonry
29. Mechanics
30. Millwork and Cabinet Making
31. Painting and Decorating
32. Plastering
33. Plumbing and Pipefitting
34. Refrigeration
35. Roofing
36. Sheetmetal
37. Small Engine Repair, Internal Combustion
38. Upholstering
39. Ventilating (Filtering and Humidification)
40. Watchmaking and Repair
41. Welding
42. Welding and Cutting
43. Woodworking

05-CONSUMER FOODS AND HOMEMAKING

1. Baker
2. Comprehensive Homemaking or Home Economics
3. Consumer Education
4. Cook/Chef
5. Dairy Technology
6. Dressmaking

7. Food Distribution
8. Food Management, Production and Services
9. Food and Nutrition
10. Food Processing Technology
11. Food Services Supervisor
12. Food Services
13. Home Economics — Related Technology
14. Home Economists and Farm Advisors
15. Home Furnishings
16. Home Furnishings, Equipment and Services
17. Home Management
18. Homemaking, Other
19. Homemaking, Preparation for Personal, Home and Family Living
20. Housing and Home Furnishings
21. Interior Decorating
22. Interior Decorators Assistant
23. Meat Cutter

06-ENVIRONMENT

1. Energy Conservation
2. Environmental Control Technology
3. Landscaping
4. Plant Science

07-FINE ARTS AND HUMANITIES

1. Art Occupations
2. Dancing Occupations
3. Dramatics Occupations
4. Music Occupations

08-HEALTH

1. Community Health Aid
2. Cytology (Cytotechnology)
3. Dental
4. Dental Assisting
5. Dental Hygiene (Associate Degree)
6. Dental Laboratory Technology
7. Dentists
8. Dietitians
9. Electrocardiography Technicians
10. Electroencephalograph Technicians
11. Environmental Health
12. Environmental Health Assistant
13. Family Health
14. Health Occupations Education, Other
15. Health-Related Technology
16. Hermetology
17. Histology
18. Home Health Aid
19. Hospital Children's Division Assistant
20. Inhalation Therapy
21. Medical Assistant (Assistant in Physician's Office)
22. Medical and Dental Technology Occupations
23. Medical Emergency Technician
24. Medical Laboratory Assisting
25. Medical and Health Occupations
26. Medical Laboratory Assisting
27. Medical Laboratory Technology
28. Medical and Related Health Occupations, Education
29. Mental Health Technician
30. Mental Health Technology
31. Nuclear Medical Technology
32. Nursing
33. Nursing Assistance (Aide)
34. Nursing (Associate Degree)
35. Obstetrical Technician
36. Occupational Therapy
37. Ophthalmic
38. Ophthalmic Dispensing
39. Optometrist Assistant
40. Orthopedic Assisting
41. Orthoptics
42. Orthotics
43. Osteopaths
44. Pharmacists
45. Physical Therapy
46. Physicians and Surgeons
47. Prosthetics
48. Psychiatric Aide
49. Radiation Therapy
50. Radiologic Technology
51. Radiologic, Other
52. Radiography
53. Radiological Health Technician
54. Rehabilitation
55. Sanitation Assistant
56. Sanitation Technology
57. School Health Aide
58. Surgical Technician (Operating Room Technician)
59. Veterinarians

09-HOSPITALITY AND RECREATION

1. Athletics and Sports Occupations
2. Entertainment and Recreation Occupations
3. Hotel and Lodging
4. Recreation
5. Recreation and Tourism

010-MANUFACTURING

1. Apparel and Accessories
2. Automotive
3. Ceramic Engineering
4. Chemical Engineering
5. Chemistry Occupations
6. Chemical Technology
7. Clothing and Textiles
8. Die Sinking
9. Electric Power Generating Plants
10. Electrical Engineering
11. Electrical Occupations
12. Electrical Technology
13. Electricity
14. Electromechanical Technology
15. Electronic Technology
16. Electronics Occupations
17. Engineering — Related Technology
18. Fabric Maintenance Services
19. Fire and Fire Safety Technology
20. Foundry
21. Gas Appliances
22. Industrial Atomic Energy
23. Industrial Electricians
24. Industrial Electronics
25. Industrial Engineering
26. Industrial Technology
27. Industrial Uses of Radioisotopes
28. Instrumentation Technology
29. Instruments (Other than Watches and Clocks)
30. Leatherworking
31. Machine Tool and Design
32. Machine Tool Operation
33. Manufacturing Industrial Managers and Officials
34. Mechanical Engineering
35. Mechanical Technology
36. Metal Patternmaking
37. Metal Trades, Combined
38. Metal working
39. Metallurgical Technology
40. Metallurgy
41. Metallurgy and Metallurgical Engineering
42. Nuclear Engineering
43. Nuclear Technology
44. Physics Occupations
45. Planning and Production Clerks
46. Plastics Occupations
47. Product Design
48. Production
49. Shoe Manufacturing
50. Structural Technology
51. Textile Production and Fabrication
52. Tool and Die Making
53. Trade and Industrial Occupations

011-MARINE SCIENCE

1. Biological Science Occupations
2. Marine Engineering
3. Oceanographic Technology (Physical, Biological and Fisheries)

012-MARKETING AND DISTRIBUTION

1. Advertising Management Occupations
2. Advertising Services
3. Central Supply Technicians
4. Distributive Education, Other
5. General Merchandise
6. Home Equipment Demonstrator
7. Industrial Marketing
8. International Trade
9. Retail Trade, Other
10. Sales Distribution Management Occupations
11. Wholesale Trade, Other
12. Wholesale and Retail Trade Managers and Officials
13. Window Display

013-PERSONAL SERVICES

1. Barbering
2. Care and Guidance of Children
3. Child Care Center Assistant
4. Cosmetology
5. Custodial Services
6. Drycleaning
7. Family Relations
8. Laundering
9. Personal Services
10. Shoe Repair
11. Tailoring
12. Waiter/Waitress

014-PUBLIC SERVICES AND RELATED PROFESSIONALS

1. Anthropology Occupations
2. Archivists
3. Astronomy Occupations
4. Child Development
5. Clergymen
6. College and University Education Occupations
7. Education of the Handicapped Occupations
8. Education Occupations, Other
9. Educational Assistants and Training Specialists
10. Firemen Training
11. History Occupations
12. Inspectors and Investigators, Managerial and Public Service
13. Institutional and Home Management and Supporting Services
14. Judges
15. Law Enforcement Training
16. Lawyers
17. Mathematics (Occupations in)
18. Mathematics and Physical Sciences Occupations
19. Meteorology Occupations
20. Miscellaneous Professional, Technical and Managerial Occupations
21. Miscellaneous Technical Education
22. Museum Curators and Related Occupations
23. Occupations in Law and Jurisprudence
24. Police (Law Enforcement and Correction) Science Technology
25. Political Science Occupations
26. Primary School and Kindergarten Education Occupations
27. Psychology Occupations
28. Public Administration Managers and Officials
29. Public Service Occupations
30. Religion and Theology Occupations
31. Secondary School Education Occupations
32. Social Sciences Occupations
33. Social and Welfare Work Occupations
34. Sociology Occupations
35. Surveyors
36. Teachers' Assistant at the Pre-primary Level
37. Vocational Education Occupations

015-TRANSPORTATION

1. Aeronautical Engineering
2. Aeronautical Technology
3. Aircraft Maintenance
4. Aircraft Operations
5. Airframe
6. Airplane Pilots and Navigators
7. Automotive Services
8. Automotive Technology
9. Aviation Occupations
10. Body and Fender
11. Civil Technology
12. Commercial Pilot Training
13. Diesel Mechanic
14. Maintenance Heavy Equipment
15. Maritime Occupations
16. Motor Repairman
17. Operation Heavy Equipment
18. Railroad Conductors
19. Roadway Technology
20. Seamanship
21. Ship and Boat Operation and Maintenance
22. Ship Captains, Mates, Pilots and Engineers
23. Traffic, Rate and Transportation
24. Transportation

Educational Information

01-APPRENTICESHIP TRAINING

1. Artist, Commercial
2. Artist, Lithocolor
3. Artist, Litho Layout and Stripper
4. Asbestos Worker
5. Baker
6. Beveler, Glass Silverer
7. Blacksmith
8. Boat Builder, Wood
9. Boilermaker
10. Bookbinder
11. Bracemaker
12. Bricklayer
13. Buttermaker
14. Cabinetmaker
15. Cameraman, Litho
16. Cameraman, Motion Picture
17. Carman (R.R.)
18. Carpenter
19. Carpenter, Coach
20. Cement Mason
21. Cheesemaker
22. Color Matcher and Ink Maker
23. Compositor
24. Cook
25. Coremaker
26. Cutter and Auto Glazier, Safety Glass
27. Cutter, Cloth
28. Cutter, Die Envelope
29. Cutter, Fur
30. Cutter, Glass
31. Cutter, Granite
32. Cutter, Meat
33. Cutter, Paperstock
34. Cutter, Warehouse Glass
35. Die Sinker
36. Draftsman, Architectural
37. Draftsman, Electrical
38. Draftsman, Engineering
39. Draftsman, Mechanical
40. Draftsman, Ornamental Iron
41. Electrical Shopman
42. Electrical Wireman
43. Electrician, Maintenance
44. Electrician, Powerhouse
45. Electrician, (R.R.)
46. Electroplate
47. Electroplate, Finish
48. Electroplate, Molder
49. Engineer, Operating (Diesel)
50. Engineer, Operating (Steam)
51. Engraver, Hand
52. Engraver, Steel Die
53. Feeder
54. Finisher, Optical
55. Finisher, Watchglass
56. Fitter, Sprinkler
57. Floor Coverer
58. Furniture Finisher
59. Furniture Maker
60. Furrier
61. Glazier
62. Glazier, Safety Glasscutter and Auto
63. Glazier, Stained Glass
64. Grainer, Litho
65. Granite Polisher
66. Granite Sand Blastman
67. Ink Maker, Color Matcher
68. Iron Worker
69. Jeweler
70. Lab Assistant, Litho Chemical
71. Lab Technician, Optical
72. Lather
73. Layout Man, Structural
74. Lens Grinder, Optical
75. Lineman, Combination Telephone
76. Lineman, Electrical Power
77. Lithographer, Class "C"
78. Lock Smith
79. Machine Adjuster, Envelope
80. Machinist
81. Machinist, Automotive
82. Machinist, Composing Room
83. Machinist, Linotype
84. Machinist, Maintenance
85. Machinist, Printing Press
86. Machinist, (R.R.)
87. Machinist, Tool Room
88. Machine Operator, Automatic Stitching and Tipping
89. Machine Operator, Folding
90. Machine Operator, Gathering
91. Machine Operator, Glass
92. Machine Operator, Ruling
93. Mailer
94. Marble Setter
95. Marking Devices Maker, Rubber and Metal
96. Mechanic, Aircraft and Engine
97. Mechanic, Auto Body and Fender
98. Mechanic, Automobile
99. Mechanic, Business Machine
100. Mechanic, Farm Tractor and Equipment
101. Mechanic, Heavy Equipment
102. Mechanic, Highway Equipment
103. Mechanic, Line Casting Machine
104. Mechanic, Motor Truck and Tractor
105. Mechanic, Plant Maintenance
106. Mechanic, Sewing Machine
107. Metal-Smith, Aircraft
108. Metal Spinner
109. Meter Tester
110. Miller
111. Millwright
112. Millwright, Maintenance
113. Moulder
114. Monument Maker
115. Offset Forms Assistant, Web
116. Opaquer, Litho
117. Operating, Litho Perfecting
118. Operating, Litho Photo Contact Room
119. Operater, Litho Offset Davidson
120. Painter
121. Painter, Automobile
122. Painter, Coach
123. Painter, Sign and Pictorial
124. Pattern Maker
125. Photoengraver, Copper Etcher
126. Photoengraver, Finisher
127. Photoengraver, Layout Man
128. Photoengraver, Proofer
129. Photoengraver, Rotograveur
130. Photoengraver, Router and Blocker
131. Photoengraver, Zinc Etcher
132. Photographer, (Commercial)
133. Photographer, Litho Half-Tone Line
134. Photographer, Photoengraver
135. Photographer, (Portrait)
136. Pipefitter, (Gas and Oil)
137. Pipefitter, Maintenance
138. Pipefitter, (Refrigerator)
139. Pipefitter, (Steam)
140. Plasterer
141. Plate Maker, Class "B"
142. Plate Maker, Litho
143. Plate Maker, Litho Offset
144. Plate Maker, Rubber
145. Plate Preparer, Litho Offset
146. Plumber
147. Press Assistant, Litho Offset
148. Press Feeder, Litho Offset
149. Press Feeder, Platen
150. Press Feeder, Assistant, Cylinder
151. Pressman, Combination Cylinder and Platen
152. Pressman, Class "A"
153. Pressman, Class "B"
154. Pressman, Cylinder
155. Pressman, Gordon
156. Pressman, Harris
157. Pressman, Kelly
158. Pressman, Litho Offset
159. Pressman, Miehle
160 Pressman, Platen
161. Pressman, Rotary
162. Pressman, Rotoengraveur
163. Pressman, Steel and Die
164. Pressman, Web
165. Printer, Class "C"
166. Printer, Job Shop
167. Printer, Photoengraver
168. Rule Maker, Steel Die
169. Serviceman, Fuel Injection
170. Serviceman, Scale
171. Serviceman, Shoe
172. Set-up Man, International Glue
173. Sheetmetal Maintenance
174. Sheetmetal, R.R.
175. Sheetmetal Worker
176. Shopman, Architectural and Ornamental Iron
177. Sign Hanger
178. Silverer and Beveler, Glass
179. Stereotyper
180. Stripper, Litho
181. Stripper, Litho Color
182. Stripper, Litho Lay-out Artist
183. Stripper and Printer, Photoengraver
184. Taper, Dry Wall
185. Technician, Dental
186. Technician, Electronic Control
187. Technician, Radio and T.V.
188. Terrazzo Worker
189. Tile Setter
190. Tool and Die Maker
191. Treater, Heat
192. Tube Bender, Neon
193. Upholsterer
194. Upholsterer, Automotive
195. Watchmaker

For such services or more specific information, assistance may be furnished by any of the following:

Director
Division of Apprenticeship
110 State Office Building
St. Paul, Minnesota 55101

Bureau of Apprenticeship and Training
U.S. Department of Labor
Room 134, Federal Building
316 Robert Street
St. Paul, Minnesota 55101

Employment Services, Local Offices
Apprenticeship Information Center
St. Paul, Minneapolis, Duluth

02-COLLEGES

1. Anoka Ramsey State Community College
2. Augsburg College
3. Austin State Community College
4. Bemidji State University
5. Bethany Lutheran College
6. Bethel College
7. Brainerd State Community College

EDUCATIONAL INFORMATION

Code	Categories	Code	Categories
A- ✓	Apprenticeship	O- ______	Other
C- ✓	College	P- ______	Private
H- ______	Hospital	V- ______	Area Vocational Institute

The career clustering system utilized as the organizational format for the Career Planning Guide also lends itself to other types of use. **The Career Interest Guide For Students** and the **Career Lattice** are two examples of how the career cluster system can bring about a clearer understanding of the relationships of occupations within the world of work. **The Career Interest Guide For Students** is useful in demonstrating the relationship of occupations to that of curriculum areas and the **Career Lattice** provides a graphic description of the levels of education needed for specific occupations within a given cluster. Each of these career display formats are included to provide alternative methods of presenting students with occupational information.

The Career Interest Guide For Students was developed by the Educational Services Department of Northern States Power Company from information obtained from the United States Office of Education. The guide provides a complete description of each of the fifteen U.S.O.E. career cluster areas, including an introductory section explaining how to use the guide. The guide may be obtained from the address below:

John P. Knievel, Supervisor
Educational Services
Northern States Power Company
414 Nicollet Mall
Minneapolis, Minnesota 55401

Career Lattice

Example

Career Lattice: Health and Medicine Clusters

High School Training:

- Ambulance Driver
- Food Service Supervisor
- Hospital Service Worker
- Orderly
- Ward-Clerk
- Operating Room Technician
- Electroencephalograph Technician

Specialized Career Training:

- Medical Assistant
- Laboratory Technician
- Optician
- Practical Nurse
- Inhalation Therapist
- Dental Assistant
- Radiologic Technologist
- Medical Secretary
- Cytotechnologist
- Histologic Technician
- Nurse's Aide
- Medical Engineer Technician
- Dental Hygienist
- Electronics Technician

College and University Training:

- Food Technologist
- Industrial Hygienist
- Manual Arts Therapist
- Biochemist
- Sanitarian
- Public Health Engineer
- Nurse
- Medical Illustrator
- Medical Technologist
- Safety Engineer
- Health Educator
- School Health Educator
- Food and Drug Inspector
- Executive Housekeeper

Advanced Study and Specialized Experience:

- Physician
- Dentist
- Podiatrist
- Optometrist
- Veterinarian
- Public Health Administrator
- Dietitian
- Rehabilitation Counselor
- Speech Pathologist
- Corrective Therapist
- Music Therapist
- Blood Bank Technologist

Those seeking additional information about career lattices may obtain it from reading each issue of National Career Information Center **Inform** Newsletter, beginning with the January 1975 addition. Due to popular request, the Career Lattice, developed by Frank Burtnett, has become a monthly feature in each issue. The display of career lattice information can be done by charts, bulletin boards and transparencies.

An exceptionally useful book to supplement this material is entitled **Career Information Handbook.** It is designed for use by high school counselors, teachers, administrators and their students as a reference tool for occupational information. Divided into sections corresponding to the U.S.O.E.'s fifteen career clusters, coverage includes comprehensive descriptions of careers within each cluster and sources of additional information in each career field. Available from the address below:

Technical Education Foundation of Texas
TSTI Box T1635
Waco, Texas 76705

Another method that assists those seeking career information is the Information Request Card. This process of securing information is designed to obtain information that is not currently available within the center. Many references (i.e. Occupational Outlook Handbook) list addresses where you can secure further information on many different occupations. The use of the card below makes it easy to obtain that information, by completing the card and mailing it to the appropriate career source.

INFORMATION REQUEST CARD

Please send me a catalog ________ Application for admission ________

Financial aid information ________ Employment information ________

Employment application ________

Name ______________________________ Graduation Date ______________

Mailing Address ____

City ________________ State ______________ Zip Code ______________

Field of Interest ____

Career Study Center II
Saint Paul Public Schools
192 West 9th Street
Saint Paul, Minnesota 55102

The use of the Career Information Request Cards not only provides a simple accession system, but also provides a ready source of information to determine the occupational and educational interests of your students by retaining the cards and tallying the responses to gain a composite picture of their preferences.

The efficient implementation of this Career Information Guide can only be accomplished by completing an inventory of all Career Resource Center materials and classifying them according to the system outlined in the Career Information Guide. The completion of that task marks the signal that you are ready to provide ready career information service to your clientele (students and staff).

One method of organizing that can speed up the process of placing information in the hands of the Career Resource Center user, is the Career Catalog File. This file could be organized alphabetically by career topic, i.e. occupation name, or area of career development such as job satisfaction. The sample Career Catalog File Card on the next page graphically describes the ease with which information could be obtained.

CAREER CATALOG FILE

Order of Topic beginning with A - Z

File Code CCF-A Career Topic ____________________

SECTION	MEDIA	TITLE	PAGE

NOTE: Section — area in Career Resource Center where material is located

Media — structure format, i.e. book, filmstrip, tape, etc.

Title — name of material

Page — specific location of ~~material~~ desired

Another resource that can assist those organizing career materials is the **Vocational Skills Training Directory**, published by:

New Vocations Project
2314 Elliot Avenue South
Minneapolis, Minnesota 55404

Cost: $1.50 per directory

The purpose of the directory is to help students and staff become better acquainted with the training possibilities available in the Saint Paul-Minneapolis Metropolitan area and how to develop a Vocational Skills Training Directory for your area. The directory covers:

1. How to use the directory
2. Making your own skills directory
3. Being yourself at school
4. Directory of Vocational skills training programs
5. Evaluating Vocational Skills Training Programs
6. Making your own Evaluation
7. Apprenticeship programs
8. Credentials in your terms

What Can Career Management Tasks Do For You?

Career Management Tasks, previously referred to by educators as objectives, can provide us with a sense of direction or a foundation upon which to build a successful career program. In other words:

1. **What is the student to learn?**
2. **How will we teach it?**
3. **How will we know the student learned it?**

These successive steps provide us with a learning process (accountability model) to access the effectiveness of our efforts. The diagram below graphically demonstrates the Learning Stages for each Career Management Task.

Learning Stages For
Career Management Tasks

→Student Objectives →Educational Objectives →Performance Criterion
(Needs Assessment) (Individualized Learning Activity) (Outcome Evaluation)
Recycle ←

The following statements describe how this process can be operationalized.

Student Objectives

The student will have interest in the future and engage in preparation of his role in it.

Educational Objective

The student will formulate a realistic if tentative post-high school plan.

Performance Criterion

The student when asked, will describe the steps necessary to implement his/her plan.

Greater specificity in writing objectives can be gained by adhering to the procedures listed below:

1. State the objective in terms of the results to be achieved.
2. List the activities designed to accomplish the results.
3. Name the personnel responsible for learning activity.
4. Establish a time table for the learning activity.
5. State the method to be used to collect evidence to evaluate the degree of success achieved.

Using this process will help facilitate gaining maximum benefit from the Career Management Tasks below.

The following list of Career Management Tasks were obtained from Tennyson's, Klauren's and Hansen's "The Career Management Program." The tasks are developed at both the junior and senior high school level and are structured in a sequence of management tasks, performance objectives and educational objectives. They were selected because of their comprehensiveness and utility. Each of the educational objectives (career skill tasks) provides a specific learning activity that can be selected as the focus of study within a Career Activity Package.

Junior High Level

MT#J1 - Clarification of a Self Concept

PO#1 Describes the relevance of his/her aptitudes and abilities for broad occupational areas.

- EO#1 Identifies his/her abilities and lists occupations in which they could be utilized.
- EO#2 Selects broad occupational areas and identifies abilities required in each area.
- EO#3 Describes how several of his/her abilities could be utilized in an occupation.
- EO#4 Describes how he/she could develop his/her aptitudes for use in several occupations.

PO#2 Describes his/her own values as they relate to occupations, work situations and personal work behavior.

- EO#1 Lists values which are congruent and incongruent with his/her preferred occupations.
- EO#2 Describes how his/her social roles are influenced by the work he/she does and how well he/she does it.
- EO#3 Identifies his/her personal values by participating in activities which make him/her aware of themselves.

PO#3 Demonstrates sensitivity to the needs of co-workers and supervisors and describes how he/she is a significant person in the satisfaction of these needs.

- EO#1 Describes ways in which his/her behavior at school and at home affects his/her immediate family.
- EO#2 Identifies requirements of students and teachers in several situations and describes how he/she meets those requirements.
- EO#3 Identifies ways in which his/her behavior in a preferred occupation could help their co-workers and supervisors, and ways in which it could hinder them.

PO#4 Predicts and gives supporting evidence for the likelihood of his/her achieving their occupational goals.
- EO#1 Describes physical, mental, social and financial requirements for reaching his/her occupational goals.
- EO#2 Identifies self-characteristics which may help or hinder achievement of his/her occupational goals.

MT#J2 - Assumption of Responsibility for Career Planning

PO#1 Describes how his/her management of personal resources (talents, time, money) affects his way of life and achievement of life goals.
- EO#1 Identifies his/her actual and potential personal resources.
- EO#2 Describes his/her present life goals and relates his/her personal resources to these goals.
- EO#3 Identifies several different ways of managing his/her personal resources which may lead to achievement of his/her life goals.

PO#2 Demonstrate a commitment to the idea that he/she should have a plan for his/her educational-vocational life.
- EO#1 Identifies various sources of educational-vocational information and describes their relevance for his/her life.
- EO#2 Formulates a tentative plan for his/her educational vocational life based upon sound information and selective use of resources.

PO#3 Plans his/her current school experience so that it fits into the pursuit of his/her occupational goals.
- EO#1 Identifies academic courses whose completion may aid in the achievement of his/her occupational goals.
- EO#2 Describes how his/her behavior in both academic and non-academic aspects of their school experience can affect achievement of their occupational goals.

MT#J3 - Formulation of Tentative Career Goals

PO#1 Identifies personal needs and sources of satisfaction which he/she should consider in planning his/her career.
- EO#1 Describes the relevance of his/her interests for broad occupational areas.
- EO#2 Identifies those factors which will be significant for a person in the selection of a career.

PO#2 Formulates a tentative educational and training plan to prepare a person for a given occupational field or preferred vocation.
- EO#1 Identifies an occupational field or preferred vocation and delineates steps necessary for entrance to that field or vocation.
- EO#2 Identifies and seeks information about alternative occupations for which training, experience and interest requirements are sufficiently similar to those of preferred occupations that they may serve as alternative career possibilities.

MT#J4 - Acquiring Knowledge of Occupations, Work Settings and Life Styles

PO#1 Increase the range of occupations of which he/she has knowledge and examines their functions and requirements.
- EO#1 Makes occupational observations in various work settings as an essential part of his/her introduction and exploration into the work culture.
- EO#2 Identifies the multicplicity of interests that may be satisfied in two or more broad occupational areas.

PO#2 Gathers information concerning the factors necessary for success on a job.
- EO#1 Debates the benefits of conforming behavior as opposed to individual initiative within the work organization.
- EO#2 Identifies various sources of information on job success and describes how he/she utilize them.
- EO#3 Identifies social, political, economic and educational factors which may affect success in his/her preferred occupations.

PO#3 Describes those factors beyond his/her control which operate within the modern work world to stimulate or retard vocational opportunities.
- EO#1 Identifies events of international significance which affect vocational opportunities (wars, Sputnik, depressions).
- EO#2 Describes the extent to which business and unions operate either on the basis of private interest or social responsibility.

MT#J5 - Acquiring Knowledge of Educational and Vocational Resources

PO#1 Identifies and utilizes those resource available for gathering information about occupational characteristics.
- EO#1 Describes resources available to him/her within the school for occupational information.
- EO#2 Lists community resources for occupational information and describes how he/she can utilize them.

PO#2 Identifies and utilizes appropriate criteria for evaluating occupational information.
- EO#1 Describes occupational resources available to him/her in terms of their accuracy, recency and completeness.
- EO#2 Identifies factors which may contribute to misinformation about occupations (occupational stereotypes, societal status rankings, incomplete research, outdated facts).

MT#J6 - Awareness of the Decision-Making Process

PO#1 Describes his/her current life context as it relates to his/her vocational decisions.
- EO#1 Constructs a definition of a value and describes the valuing process.

- EO#2 Identifies personal values, personal and family aspirations and family background factors which may influence his/her vocational decisions.
- EO#3 Identifies the vocational and educational options available to him/her and describes their feasibility.
- EO#4 Projects those factors which may inhibit or deter his/her educational or vocational progress.

PO#2 Describes how the expectations of others affect his/her career plans.
- EO#1 Identifies significant others in his/her life and lists expectations they have of them.
- EO#2 Describes how his/her present behavior is affected by the expectations of others.
- EO#3 Identifies ways in which his/her career behavior affects the lives of those around them (parents, spouse, etc.).

PO#3 Projects decisions he/she will face in the future and describes means of facing them.
- EO#1 Identities decisions he/she must make prior to entering an occupation and lists options available to them.
- EO#2 Identifies several ethical questions which confront workers in his/her preferred occupation(s) and describes the ways in which these people have formed acceptable solutions.

MT#J7 - Acquiring a Sense of Independence

PO#1 Identifies those characteristics which make him/her a unique individual.
- EO#1 Describes a persons physical, mental and social abilities and aptitudes.
- EO#2 Identifies a wide range of social organizations and describes their own potential as a contributing member of each.

PO#2 Selects from the advice given by significant others that which he/she can utilize in planning their career.
- EO#1 Identifies factors which affect the advice given by others (their own needs, misinformation).
- EO#2 Describes similarities and differences between his/her needs and abilities and the needs and abilities of those giving them advice.

PO#3 Demonstrates an ability to evaluate and cope with varying expectations so that he/she may satisfactorily perform in a given work situation.
- EO#1 Describes the motivations of supervisors and coworkers in the work environment who may hold varying expectations regarding his/her present work performance.
- EO#2 Ranks varying expectations according to their importance in successful completion of the work task and according to their importance in making the work situation a pleasant one.

Senior High Level

MT#SE - Reality Testing of a Self Concept

PO#1 Describes his/her own abilities, aptitudes and other personal resources in relation to the requirements for preferred occupations.
- EO#1 Identifies both actual and potential personal.
- EO#2 Describes the physical, mental, social, economic and educational requirements of his/her preferred occupations.

PO#2 Describes the social roles and social demands he/she must fulfill for successful performance in their preferred occupation(s).
- EO#1 Identifies the value he/she places on personal endeavor and achievement compared to societal values.
- EO#2 Describes the roles of various workers in his/her preferred occupation(s) noting the similarities and differences in how they perform and how successful they are.

PO#3 Demonstrates success in coping with new social and work roles.
- EO#1 Copes with authority exercised by others in ways which lead to effective realization of his own personal goals.
- EO#2 Handles his/her own position of authority in the work environment in ways which lead to effective realization of personal goals and development of others.

MT#S2 - Awareness of Preferred Life Styles

PO#1 Makes explicit his/her life style needs and priorities at this point in time.
- EO#1 Describes how self characteristics relate to the responsibilities and tasks of his preferred occupation(s).
- EO#2 Identifies life style needs which may be in conflict with the demands of his preferred occupation(s) and assigns them a priority ranking.

PO#2 Describes the ways in which his/her career choice may affect his/her future life style.
- EO#1 Describes life styles and ways of living associated with a few occupations in the broad occupational area or areas of his/her choice.
- EO#2 Describes how different occupations and work settings vary in the degree of personal freedom to define one's role and activities.
- EO#3 Explains how a vocation may contribute to a balanced and productive life.

MT#S3 - Reformulation of Tentative Goals

PO#1 Studies and projects a career plan that will enable him/her to pursue an occupation which will fulfill the personal needs and values they consider most important.

EO#1 Describes how the image he/she holds of his/her preferred occupation relates to information he/she receives through occupational literature and real contacts with workers.

EO#2 Seeks information about the way his/her preferred occupation(s) may affect their life style.

PO#2 Describes how his/her preferred occupation can be a source of satisfaction and human expression of self.

EO#1 Describes the ways in which his/her preferred work contributes to the welfare of society.

EO#2 Identifies personal qualities which can be developed and expressed through his/her work.

MT#S4 - Increasing Knowledge of and Experience in Occupations and Work Settings

PO#1 Describes the interdependency of all workers and work talents in contributing to the well-being of the community.

EO#1 Describes the roles required of workers in various occupations and assesses the compromises involved in performing these roles.

EO#2 Investigates and discusses the ways in which management, labor and government interact to influence work life.

EO#3 Demonstrates the ability to depend on others and to be depended upon in the work environment.

PO#2 Describes work as a principal instrument for coping with and changing his/her own environment.

EO#1 Describes changes within the modern work society which have affected the traditional division of labor by sex.

EO#2 Describes how he/she can work for social change within their preferred occupation(s).

EO#3 Identifies outcomes of his/her work which assist them in coping with their environment.

PO#3 Selects potential employers and locates suitable job opportunities.

EO#1 Describes the roles required of workers in his/her preferred occupation(s) and identifies compromises they would have to make to fulfill those roles.

EO#2 Elicits information about what persons with experience and training in his/her preferred occupation(s) are receiving as compensation.

MT#S5 — Acquiring Knowledge of Educational and Vocational Paths

PO#1 Describes the quality of education, job training, or work experience necessary in preparation for a preferred occupation.

EO#1 Seeks information concerning the content and requirements of educational and training courses that may facilitate occupational goals.

EO#2 Identifies sources of financial aid for further education or training and the requirements or restrictions of specific assistance.

EO#3 Interprets census and occupational outlook data and draws conclusions about employment trends in various occupations.

EO#4 Identifies the various job ladder or career progression possibilities of a few jobs in several broad occupational areas.

PO#2 Seeks information about what skills are needed to get a job.

EO#1 Identifies skills necessary for success in preferred occupation(s).

EO#2 Identifies and practices appropriate behavior for an employment interview.

EO#3 Identifies information that should be included in a resume and/or application form.

MT#S6 — Clarification of the Decision-Making Process as Related to Self

PO#1 Projects and describes the factors which may influence his/her career decisions.

EO#1 Compares immediate rewards with long term rewards in several occupations.

EO#2 Describes potential economic opportunities in relation to personal satisfactions in considering different occupations.

PO#2 Accepts responsibility for making occupational choices and moving towards occupational goals.

EO#1 Predicts the effect his/her career decisions may have upon significant others.

EO#2 Identifies the personal compromises he/she may have to make in order to attain his/her preferred occupational gains.

MT#S7 — Commitment with Tenativeness Within a Changing World

PO#1 Identifies the changing meanings of work over time and between cultures.

EO#1 Examines social and economic trends for their potential effect upon broad occupational fields and upon opportunities within preferred occupations.

EO#2 Describes how a person's career may be a means to effect social change.

PO#2 Makes career plans which take into account the fact that technology and automation influence change and may create the need for transferable skills.

EO#1 Describes the extent to which technological change may affect the employment opportunities and role requirements of preferred occupation(s).

EO#2 Identifies skills or knowledge utilized in the preferred occupation(s) which may transfer to another occupation.

Two additional resources that provide an excellent developmental structure of career objectives are found in the California Personnel and Guidance Association Monograph Number 5 — **Career Development: A California Model for Career Guidance Curriculum K — Adult** and **The Career Survival Skills Kit** published by Charles E. Merrill Publishing Company, A Bell and Howell Company, Columbus, Ohio 43216.

How Do You Develop And Use Career Activity Packages (C.A.P.s)?

The Career Activity Package (C.A.P.) format is designed to provide a method of organizing student instruction. It provides both structured format and flexibility that can be utilized to adapt to individual student needs. When properly programmed for use by the teacher, it becomes a self instruction module.

Each C.A.P. is organized into four sections. The following provides a brief explanation of the purpose of each section:

Section I — identifies the student who will use the C.A.P., the date the student started and completed the C.A.P., the career development level of the student and the specific task to be learned.

Section 2 — provides the student with information that will aid him/her in learning the career skills task.

Section 3 — organizes the students learning by providing the sequential steps necessary to complete the task, including appropriate resources. The step completed column provides the student with self reinforcement and an orderly method of pacing his learning.
Section 4 — reviews the student's work by identifying problem areas and the student's next step. This process provides both the student and teacher with an effective means of evaluating and directing the student's learning.

Career Level: (Circle appropriate level) [✓ Orientation] — Exploration — Planning — Job Preparation

Career Skills Tasks: The student will state the fifteen career clusters and give an example of occupations that are in each cluster.

Note To Student: The career cluster system is used to describe and organize many common occupations in the world of work. There are 15 clusters with many occupations listed within each cluster.

Step Completed	Learning Steps	Resources
√	View sound-filmstrip	Career Clusters and the World of Work
√	Complete a Telescopic Look at Careers	A Telescopic Look at Careers #5 career sheet

Check Yourself

1. Did I complete the Learning Steps? Yes
2. These are the difficulties I had: It was hard to remember all of the clusters
3. What do I need to do next? I need to explore occupations in the health and personal services clusters.

In developing the Career Activity Package concept it is helpful to prepare a teacher guide sheet to accompany each C.A.P. A suggested format for the guides would include:

1. Name and number of C.A.P.
2. Program Goal
3. Outline of developmental learning process
   - student objective — needs assessment
   - educational objective — learning activity
   - performance criterion — evaluation
4. Teacher notes
   Special suggestions relate to this specific C.A.P.

Suggested Topics For Career Activity Packages

The list of career topics below are provided to stimulate your thinking and encourage the development of Career Activity Packages.

Career Topics

1. Where To Look For A Job
2. How To Get A Job
3. Choosing A College
4. Preparing For A Job Interview
5. How To Read Want Adds
6. The First Few Days On The Job
7. What You Need To Know To Fillout An Application Form and Personal Data Sheet
8. How To Make A Good Impression
9. Unions and Employee Associations
10. Student Essay About Themselves and the World of Work
11. Writing A Letter of Application and Resumé
12. Making A Career Tree
13. Using Your Abilities On A Job
14. Using Your Interests On A Job
15. Exploring Occupations In The World of Work
16. Exploring Occupations: An In-Depth Study
17. Goal Setting
18. Job Satisfaction: What Workers Need
19. Life Styles of Workers
20. Developing Your Career Self-Concept

The development of Career Activity Packages from the Career Topic List can be significantly aided through the use of the following Career Resource Guides. Each of these references have materials that will assist C.A.P. developers.

COMMERCIAL PRODUCT DESCRIPTIONS

The products described in this section have been found to be useful in the development of a Career Resource Center, but should not be considered to be the only materials that can successfully stock a center. They provide a good cross-section of career materials, demonstrating both diversity of media format and subject content. In selecting the material, concern was given to identifying those commercially developed programs that could be used for individualized instruction, small group instruction and general classroom use.

Realizing that maintaining a center is equally as important as implementing one, it is suggested that a current file of catalogs, listing commercial materials be kept up-to-date to aid in the study, selection and purchase of other materials when funds become available. Your efforts to expand the resources in your center, can be rewarded by continually evaluating material and having a priority list of future materials to be purchased, ready in the event of the availability of new funds. Getting your name on the mailing list of:

Chicago, Illinois 60606

(Subscription $5.50)

is an essential first step in keeping aware of new career materials. Another safeguard to obtaining materials of highest quality is always ordering materials on approval. This means that you are given a time period, usually 30 days, to inspect the materials before you decide to keep them. Utilizing this method sometimes requires some extra clerical work and mailing, but is well worth the effort in assuring the acquisition of materials of proven excellence.

A recent state publication, **Career Development Resource Guide,** authored by Ken Held, provides a comprehensive review of career resource materials. Utilizing this guide will save you considerable time in identifying appropriate career resources. The guide is available from the Pupil Personnel Service Section of the Minnesota Department of Education or the Department of Documents.

The commercially produced references below will aid those seeking various audio-visual resources:

Title: **Career Data Book and Student's Booklet Accompany the Career Data Book**

Manufacturer: American Institutes for Research

Distributor: American Institutes for Research
Publications
P.O. Box 1113
Palo Alto, California 94302

Date:

Cost: Career Data Book $5.50
Students Booklet (25) $3.00

Grade Level: 10-12

Description of Media: Book and Booklet

Description of Material:

The Career Data Book summarizes periodic results of Project Talent, a twenty-year longitudinal study of American youth, relating their aptitudes, interests and education to their occupational choices. It provides the high school student and guidance counselor with a large amount of objective data on just what types of students actually go into different occupations. The relations between test scores in high school and occupations five years after high school are provided for comparative study. By using the profiles in this book, in conjunction with the counselor's profile of the individual student, the guidance counselor will be able to tell the student the extent to which he matches the typical members of an occupation, or group of occupations. Students can use this information to develop their career plans.

The listing below indicates the occupational grouping pattern used to organize occupations in **The Career Data Book.**

1. Engineering, Physical Science, Mathematics and Architecture
2. Medical and Biological Science
3. Business Administration
4. General Teaching and Social Service
5. Humanities Law, Social and Behavioral Sciences
6. Fine Arts, Performing Arts
7. Technical Jobs
8. Proprietors, Sales
9. Mechanics, Industrial Trades
10. Construction Trades
11. Secretarial — Clerical, Office Workers
12. General Labor, Community and Public Service

Title: **Career Opportunities for Technicians and Specialists (5 volumes)**

Manufacturer: Doubleday and Company, Inc.

Distributor: J. G. Ferguson Publishing Co.
6 North Michigan Avenue
Chicago, Illinois 60602

Date: 1974

Cost: $35.80

Grade Level: 7 — Adult

Description of Media: Books

Description of Materials:

The Five Volumes, AGRICULTURAL, FORESTRY, AND OCEANOGRAPHIC TECHNICIANS; COMMUNITY SERVICE AND RELATED SPECIALISTS; ENGINEERING TECHNICIANS; HEALTH TECHNICIANS; MARKETING, BUSINESS AND OFFICE SPECIALISTS.

This new series answers all the questions your students ask . . . What kind of a job can I get? Is this kind of work right for me? Where can I go to college? Junior college? Community college? Technical institute? What should I take in high school . . . What courses will I take after high school? What kind of beginning job will I get, and how do I get it? How much will I make? What are my chances of getting ahead? Will my job be obsolete in five years?

Title: **Deciding**

Manufacturer: College Entrance Examination Board

Distributor: College Entrance Examination Board
Publications Order Office
Box 592
Princeton, New Jersey 08540

Date: 1972

Cost: Student Booklet — $2.50 20% discount over 100
Leader Guide — $2.00 30% discount over 1,000

Grade Level: 7 - 9

Description of Media: Booklet, 45 pages

Description of Materials:

DECIDING, a course of study to teach students how to make decisions, and its companion publication, DECIDING: A LEADER'S GUIDE, represent a new and innovative attempt by the College Entrance Examination Board to assist students in making well-informed and well-considered decisions about themselves, their education, and their future.

Designed for students in junior and senior high schools, program is a course of study in development of decision-making skills that can serve as a basis for a school-wide decision, making curriculum, as a major component in the guidance program, or as part of the subject areas such as English, Social Studies and Health Education.

Title: **Decisions and Outcomes**

Manufacturer: College Entrance Examination Board

Distributor: College Entrance Examination Board
Publications Order Office
Box 592
Princeton, New Jersey 08540

Date: 1973

Cost: Student Booklet — $2.50 20% discount over 100
Leader Guide — $2.00 30% discount over 1,000

Grade Level: 10 - 12

Description of Media: Booklet, 48 pages

Description of Material:

Decisions and Outcomes is a new decision making curriculum intended to help older high school students, college students and adults, who are faced with personal, educational or career decisions. The book and its companion publication, **Decisions and Outcomes,** A Leader's Guide, present a course of study in the development and application of decision making skills. The book can serve as a framework for a course in decision-making, as a major component in guidance and counseling programs, or as part of subject areas such as English, history, human relations, drug education, and health education. The materials are especially appropriate for use in group settings, including classrooms, college orientation programs, and small counseling situations.

Throughout the book, special emphasis is placed on the three main elements of decision-making information, strategy, and values and the importance of understanding and learning to use each of these three skillfully to gain increased freedom and control in one's life. More specifically, the book helps participants to gather and evaluate information, clarify and explore their values, examine their risk-taking tendencies, set short, and long-range goals, and figure out strategies for making decisions.

Title: **The Encyclopedia of Careers and Vocational Guidance**

Manufacturer: Doubleday and Company, Inc.

Distributor: J. G. Ferguson Publishing Co.
6 North Michigan Avenue
Chicago, Illinois 60602

Date: 1972

Cost: 999 or under $.08 each
Reduced price for larger quantities
Desk-Top Display with 220 Booklets
$23.00

Grade Level: 7 - 12

Description of Media: Comic Book

Description of Materials:

Job Scene Booklets are a series of twenty-two high-impact, visual pamphlets that squarely answer minority students' questions about the jobs where they can most likely find success. These booklets are especially valuable for youngsters who don't know exactly where they would be successful. Each pamphlet in this series describes one occupation. It gives the reader a "feel" for the type of work, tells him what kind of skills he'll need, and where he can get them. Also, tells him what kind of future each job holds. These booklets give disadvantaged youngsters the sense that they are personally responsible for what happens to them . . . stress the potency and masculinity of work rather than street life . . . set young people's feet on the right track, clearly showing them how to make progress . . . picture the possibility of a bright future. Ideal for those who are unsure of what they want to do. Each booklet is printed in four colors, contains eight pages, and measures 5" x 7". Booklets include following titles:

Careers in:

Apparel
Motor Transportation
Public Utility
Fabricated Plastics
Office Machine Cares.
Hotel and Restaurant

A Drafting Career
Welding
Clerical Work
Retail Sales Work
Furniture Making as a Career
Auto Mechanic
Dairy Products
Health Work
Machine Shop Work
The Food Field

Title: **Occupational Awareness Mini-briefs**

Manufacturer: Occupational Awareness

Distributor: Occupational Awareness
Box 5098
Los Angeles, California 90055

Date: 1972

Cost: Sample costs listed below

Grade Level: 7 - Adult

Description of Media: Printed Material

Description of Materials:

The **mini-brief** is designed to give the student a complete, informative exposure to basic aspects of the occupation. Each brief also provides the student with a listing of related occupations for easier entrance, advancement, and mobility. The **mini-brief** quickly gives the student an idea of amount and kind of training, financial rewards and competition in employment. Those students interested in the occupation will find pertinent information for further self assessment.

The Occupational Awareness program is particularly adaptable to the junior high school program, in both coverage of the occupational scene and in economy. The structure of junior high classes into basic survey subjects requires only the purchase of the packets in the major subject areas:

Social Studies	$46.40
Agriculture	23.00
Art	17.60
Business	38.70
English	21.65
Foreign Language	9.50
Home Economics	30.65
Math	54.05
Music	12.20
Physical Education	13.55
Science	45.50
Industrial Education	64.40

Title: **Occupational Outlook Handbook**

Manufacturer: U. S. Department of Labor
Bureau of Labor Statistics

Distributor: U. S. Department of Labor
Bureau of Labor Statistics
Washington, D. C.

Date: 1974 - 75

Cost: $6.25

Grade Level: 7 - Adult

Description of Media: Book

Description of Materials:

The Handbook starts with three introductory chapters designed to help counselors and students make effective use of the book and to give them a general view of the world of work.

The reports on different fields of work make up the main body of the book. The seven major divisions of the book are: professional and related occupations; managerial occupations; clerical and related occupations; sales occupations; service occupations; skilled and other manual occupations; and some major industries and their occupations. Within each of these major divisions, occupations are grouped into related fields. The introductory statement for each major industry group provides information on occupational trends in the industry.

Title: **Popeye Career Comic Books**

Manufacturer: King Features Syndicate, Inc.

Distributor: King Features
235 East 45th Street
New York, New York 10017

Date: 1972

— Individual use in classroom career projects
Available in 7 volume series or by subscription.

Title: **Why Am I Afraid To Tell You Who I Am?**
Manufacturer: Argus Communications
Distributor: Argus Communications
7440 Natches Avenue
Niles, Illinois
Date: 1969
Cost: $1.95 Book
Filmstrip, cassette, teacher's guide — $55.00
Grade Level: 10 - 12
Description of Media: 1 book, 1 filmstrip, 1 cassette, and 1 teacher's guide

Description of Materials:

This book provides insights on self-awareness, growth, and communication written for the general public. It discusses:

1. Understanding the Human Condition
2. Growing as a Person
3. Interpersonal Relationships
4. Dealing with our Emotions
5. Human Hiding Places: Methods of Ego Defense
6. Catalog of Games and Roles

The central theme of the book deals with the concept of self-disclosure "to tell you who I am".

The author feels this concept is the basis of personal growth and human understanding.

Title: **You and Your Job**
Manufacturer: Doubleday and Company, Inc.
Distributor: J. G. Ferguson Publishing Co.
6 North Michigan Avenue
Chicago, Illinois 60602
Date: 1969
Cost: $5.95
Grade Level: 7 - Adult
Description of Media: Pamphlets

Description of Materials:

This series consists of five pocket-sized pamphlets of information and resource materials for the student.

You and Your Job: What is it? This illustrated pamphlet (33 pp.) provides information to the reader about jobs — "What are they?" The pamphlet gives information to answer questions such as "How do these changes affect me? Where do I go for information? What skills do I have and what skills do I need?

You and Your Job: Where is it? This illustrated pamphlet (29 pp.) starts the reader on the trail toward locating a job. "Where do I start looking for a job? What should I do if I find a job opening I like? How do I present my qualifications to an employer? What are sources for finding a job?"

You and Your Job: How to Get It? This illustrated pamphlet (57 pp.) discusses how to get a job: How to get organized, how to apply for a job, how to dress for a job interview, how to present experiences to a prospective employer, and how to follow-up on a job interview.
You and Your Job: How to Keep It? This illustrated pamphlet (36 pp.) gives the reader some helpful hints on keeping his job. "Be at the job on time and ready to go to work. Keep your cool. Ask questions. Keep trying. Realize that you can learn from everyone. Getting along with people is important not only with your supervisor but fellow workers as well."
You and Your Job: Where Do You Go From Here? This illustrated pamphlet (26 pp.) encourages the job holder to maintain his level of performance and to look for ways of improving his performance on the job or through further training of education.

Product Title:	**Rainbow Vocational File**
Manufacturer:	Orvis Anderson
Distributor:	Orvis Anderson Box 506 Montevideo, Minnesota
Date:	1972
Cost:	$60.00
Grade Level:	7 - 12
Description of Media:	A file consisting of 12 categories of 4" x 6" career information cards.

Description of Contents:

The Rainbow Vocational File was developed to help individuals who want to do more than just get a job. It is a very handy grouping of information to use as you consider your potential and search for vocations that are challenging and satisfying. The items below help you understand the Rainbow Vocational File. This file, if properly used, can be a valuable and time saving instrument as you explore your career opportunities.

1. You know that school subject (or subjects) which is most interesting for you to study. It would be logical to expect your interest to carry over so that you would find vocations which use (or are related to) your favorite school subject to be enjoyable also.

2. Usually, but not always, you do your best work and show your highest skill in this most interesting subject. If this is true of you, that subject would be the one to consider most. If not, you have two approaches to investigate in relation to vocational choices — your most interesting subject (or subjects) and your highest skill subject (or subjects).

Films

Title: **"Bob and Caren and Ted and Janice"**

Manufacturer: Data Films

Distributor:
Data Films
2625 Temple Street
Los Angeles, California 90026

Date: 1973

Cost:

Grade Level: 7 - 12

Description of Media: Film, color, drama format, 25 minutes

Description of Material:

Directed at teenagers in their own contemporary format and peer group. A first film introduction to the vocational aspect of career education. It shows how a saleable skill need not be an alternative to college, but support for it.

Description of Media: Film, color, 25 minutes

Description of Material:

This film discusses private technical schools, correspondence schools, the armed service, adult education programs and community colleges as alternatives to four year colleges for post high school training. The advantages and disadvantages of each kind of program is described along with examples of occupations accessed through these routes. Sights and sounds of job sites and training sessions are included.

Title: "Other Women, Other Work"

Manufacturer: Churchill Films

Distributor: Churchill Films
662 North Robertson Blvd.
Los Angeles, California 90069

Date: 1974

Cost: $230.00

Grade Level: 7 - 12

Description of Media: Film, color, 20 minutes

Description of Material:

"Other Women, Other Work" is a film presentation that uses the vocational or careers approach to convey the message of equal employment opportunities for all. By using women employed as a truck driver, veterinarian, roof shingler, marine biologist, airplane pilot, carpenter, and TV news reporter. Viewers are exposed to some facets of each of these occupations. By the use of voice over action, each worker tells her experiences and reactions to working in roles traditionally given to men. This film is highly recommended by the N.V.G.A.

Title: "Revolution In Relevance"

Manufacturer: Data Films

Distributor: Data Films
2625 Temple Street
Los Angeles, California 90026

Date: 1973

Cost: Not available

Grade Level: 7 - 12

Description of Media: Film, color, documentary, 20 minutes

Description of Material:

Targeted for students approaching their career decisions, also their parents. It is a comprehensive view of how vocational education provides relevance, opportunity, security, responsibility. The film enhances the counselors' image by featuring an able counselor as a key character in each dramatized episode.

Title: "The Working World", Series

Inventories

Title: **Pictorial Inventory of Careers**

Manufacturer: Educators Assistance Institute

Distributor:
Educators Assistance Institute
9841 Airport Blvd.
Los Angeles, CA 90045

Date: 1972

Cost:
$300.00 2 complete slide carousel trays
$.70 per student processing charge, with a minimum rate of $35.00 per order

Grade Level: 9 - 12

Description of Media: 2 carousel trays of color slides and accompanying answer cards

Description of Content:

The Pictorial Inventory of Careers (PIC) represents a new dimension in testing. It is a unique interest assessment device designed to serve as an alternative to traditional interests tests. The inventory utilizes 35mm slide pictures instead of verbal statements, thus allowing it to be used in the elementary and secondary school, in the junior college and with adults who have little or no formal education. It emphasizes the "affective" mode as opposed to the intellectual "cognitive" processes. And finally, the test items are based on, and the results profiled according to, actual occupational training routinely offered at many community colleges and trade/technical schools.

Title: **Self-directed Search**

Manufacturer: Consulting Psychologists Press, Inc.

Distributor:
Consulting Psychologists Press, Inc.
577 College Avenue
Palo Alto, CA 94306

Date: 1972

Cost:
Single copy — $100
Package of 25 — $20.00
Package of 100 — $72.50
Package of 500 — $300.00

Grade Level: 9 - 12

Description of Media: Multiple sectioned inventory with accompanying occupational finder booklet.

Description of Content:

The SDS is an instrument which enlists the student in a thoughtful assessment of his own interests and abilities and leads him logically to survey a number of occupations for which he seems best suited. Designed to be answered, scored, profiled, and interpreted by the student himself. The SDS is an exciting exercise in self-discovery and a relevant induction to the world of work. The student works his way through a 16 page workbook with the aid of an originally classified occupational index called the occupations finder. The counselor may monitor the process and the conclusions, suggesting additional testing or discussion when indicated. The SDS shows the student how he resembles each of six occupational personality types, based on Holland's theory of occupational choice. SDS is also available in form E for students who have reading difficulties.

Kits

Title: **Career Survival Skills**

Manufacturer: Charles E. Merrill Publishing Co.

Distributor: Charles E. Merrill Publishing Co.
A Bell & Howell Company
Columbus, Ohio 43216

Date: 1973

Cost: $45.00

Grade Level: 5 - 12

Description of Media: Kit

Description of Material:

Career Survival Skills is designed to help upper elementary and junior and senior high school students understand and use resources for life and career planning. The intent of the program is not to explore and examine specific occupations or careers but to help students develop a broader set of career development concepts and competencies that will equip them to make their own plans for the future at the appropriate time.

The Teacher's Manual is the core of the program and consists of six units comprised of thirty-nine exercises. The exercises are aimed at two conceptual levels: Level 2, grades 5 - 8; Level 11, grades 9 - 12. The kit is made up of the following components:

—Teacher's Manual, Spirit Master Data Sheets and Transparencies, and Cassette

—Career Education Index

—Handbook

—Wall Chart

—Three professional books: Career Education: **Perspective and Promise** by Keith Goldhammer and Robert E. Taylor; **Career Development in the Elementary School** by Robert L. Gibson; and **Developing Careers in the Elementary School** edited by Norman C. Gysbers, Wilbur Miller and Earl J. Moore.

Title: **The Compulearn System**

Manufacturer: Compulearn, Inc.
1321 4 Gateway Center

Title:	**Human Relations Kit**
Manufacturer:	Webster Division McGraw-Hill Book Company
Distributor:	Mid Continent Region McGraw-Hill Book Company Distribution Center Manchester Road Manchester, MO 63011
Date:	1970
Cost:	$169.50
Grade Level:	9 - 12
Description of Media:	Multi-Media Kit, 8 tape cassettes, 1 52 frame color filmstrip, 20 student workbooks, simulation materials, Instructor's Procedure guide, instructor's program overview.

Description of Material:

This complete **Human Relations** (multi-media) **kit** is designed for use by up to 20 students, and contains all teaching aids needed for a 40-hour learning lesson. It was created to prepare high school and vocational students for the social transition to a work environment. The kit is action oriented, presenting job related problems requiring realistic solutions in a working situation. Students focus on four key elements: work habits, communication, problem-solving, and social skills. The kit uses group exercises, simulation games, rap sessions, and audio-visual materials to provide the skills that have the greatest impact on jobs performance. In this way, students learn to understand and solve problems using their own judgment.

Title: **Job Experience Kit**

- veterinarian
- X-ray technician

Students solve problems typical of each occupation. Motivates career exploration and exposes students to real job activities.

Can be used on an Individual or group basis in guidance classes, homeroom, vocational, social studies, or English courses.

Title: **Job Survival Skills**

Manufacturer: Singer Education Division

Distributor: Singer Education Division
Education Systems
Rochester, NY 14603

Date: 1973

Cost: $495.00

Grade Level: 9 - 12

Description of Media:
13 sound filmstrips
5 game boards and accessories
2 self-concept profile boards and accessories
4 cooperation/competition puzzles
3 communication exercise cards
1 overview manual
1 group leader's instructional manual
20 participants' workbooks
20 interview appointment slips

Description of Material:

Job Survival Skills is a multi-media approach to training individuals in critical personal and interpersonal job behaviors. A product of SINGER Education Systems' experience in manpower training, corrections and vocational rehabilitation, for the forty-two activities in fifteen units are designed for groups as small as eight or as large as twenty.

The first five units deal with the human relations skills of understanding different points of view, the influence of self-concept on behavior and effective communication. These basic skills are then applied to vital "job survival" behavior, such as, how to select, locate and secure a job, supervisory and co-worker interaction and other positive job behaviors.

The content of a unit is introduced by a sound/filmstrip. Processing and reinforcement are achieved through the use of a variety of highly participatory activities: gaming, group discussion, brainstorming, role-playing and written exercises. The group Leader's Instruction Manual provides specific guidance for each activity as well as suggestions for the creation of related activities.

Job Survival Skills may be purchased in the full kit or in separate units. Consumqble items, workbooks and appointment slips, can be ordered separately.

Extra supplies for the Kit may be purchased at the prices listed below:

Package of 10 participant workbooks	$15.00
Package of 20 Interview Appointment notices	$ 3.80
A film strip	$ 8.00
AM Audio tape cassette	$ 6.00

Title: **Occupational Profiles**

Manufacturer: Johnson Publishing Company

Distributor: Johnson Publishing Company
428 S. Wilbur
Mesa, Arizona 85202

Date: 1973

Cost: $25.00

Grade Level: 10 - 12

Description of Media: 1 - Occupational Profile, "Slide-Rule" with 2 interchangeable occupation information cards and an accompanying Occupational Information Index.

Description of Material:

A new instructional tool designed to meet the needs of students and counselors by providing immediate career information. You can retrieve the following information about any one of 14,000 occupations in a matter of seconds.

1. Occupational group and group numbers of related occupational groups.
2. Degree of involvement with data, people, and things.
3. General educational development grade level.
4. Specific vocational preparation time in years or months.
5. Aptitudes needed by workers.
6. Interests involved in specific occupations.
7. Workers temperament and required.
8. Physical demands of occupations.
9. Working conditions of the occupations.
10. What the worker does.
11. Methods of entry into the occupation.
12. Suggested experiences that would help a person decide whether they should explore this field of work.

All information is based on **Dictionary of Occupational Titles**, a U.S. Department of Labor publication.

Title: **Search for Values**

Manufacturer: Center for Learning, Inc.

Distributor:
Pflaum/Standard
38 West Fifth Street
Dayton, OH 45402

Date: 1972

Cost: $44.95

Grade Level: 9 - 12

Description of Media: Teacher Resource Book and 7 Spirit Master Packets for each of the 7 Instructional Units (77 masters).

Description of Material:

Search for Values is designed to help students sort out their actions and feelings about the world within and around them. It is a tool kit of strategies and techniques which can help a person see more clearly, the directions his day-to-day choices are taking. This new program in the Dimensions of personality series aims to help students come to grips with their personal value systems. It does so through self-reflection and peer interaction.

The structured units in this program represent 44 lessons that cover these pertinent topics: competition, authority, time, personal space images, relationships, and commitment. The units may be used individually or in conjunction with one another. Although the lessons are not sequently structured, the latter units and lessons contain more advanced activities than the first.

Title: **Valuing, Exploration, Discovering**

Manufacturer: Argus Communications

Distributor:
Argus Communications
7440 Natches Avenue
Niles, Illinois

Date: 1971

Cost: $17.50

Grade Level: 10 - 12

Description of Media: 1 Resource Book, 1 Tape, 6 Poster Cards, 3 Visual Card Sets, 1 Test, 1 Leader Manual.

Description of Material:

This kit provides a series of experiences to bring into focus the important value dimensions of our lives. To clarify what our values are, to understand how they affect our encounters and relationships with others and with the changing world around us.

Other points covered in this kit are:

— Confronting change: dealing with our feelings about change is no simple task. We need the concern and support of others. Therefore, how we relate to others is important.

— Knowing how to relate: know yourself, be open to and understand others. Understanding involves more than listening to what is said; it means listening to feelings and attitudes as well.

— Trust: to trust another is to value another—to affirm his value as a person.

Each of these personal relationship concepts are explored through the following units:

1. Values and change: Basic Principles
2. Examining Personal Values: A Discovery Experience

3. **Values in Listening: An Experience in Communication**

4. **Applying Values: Three Experiences in Role-playing and Sculpturing.**

Competition, authority, time, personal space images, relationships, and commitment. The units may be used individually or in conjunction with one another. Although the lessons are not sequently structured, the latter units and lessons contain more advanced activities than the first.

Title: **Vocational Exploration Group**

Manufacturer: Studies of Urban Man, Inc.

Distributor:
Studies of Urban Man, Inc.
William Elster
P.O. Box 1039
Tempe, Arizona 85281

Date: 1972

Cost: Kit $175.00, Leadership Training $85.00

Grade Level: 9-12

Description of Media: Multi-media Kit, including Booklets, charts, and Job Inventory Forms

Description of Material:

The Vocational Exploration Group members explore these three critical links, probing both into themselves and the world of work. This kind of JOB PERSONALIZATION is the process for the Vocational Exploration Group. Thus the goal of the Group is for each member to understand the man-job relationship and to apply this understanding to himself and his own situation.

While there are two programs, short and extended, both entail similar tasks. The activities are sequenced through a number of structured tasks; The Group begins with inclusion activities, to reduce the fear of exploration, then examines the world of work via a twofold matrix of job function (Data, People or Things) and job preparation (training on-the-job, special skill training or college). Next, the group shares information they have about jobs, and uses graphic materials to acquire additional job information books. The members then expand their choices by relating one job to several others. Finally, the group focuses on an individual plan for each member, encompassing the occupational goal and the next step toward it. At intervals during the sequence, the members fill out a job inventory which clarifies their vocational choices and the man-job relationship underlying it. Throughout, carefully designed visual aids are employed to enhance the exploration process.

Title: **World of Work, Vols. I and II**

Manufacturer:

Description of Media: Vol. 1 12 Cassette Tapes, 24 Student and Record Books, Instructor's Guide, Permanent Storage Box. Vol. II 20 tape cassettes, 24 student record booklets, instructor's guide, permanent storage box.

Description of Material:

On the job will help precisely where most training efforts are weakest — in the sensitive area of interpersonal skill. Through taped lessons requiring written responses and real-life dramatizations that spark group discussions, students are exposed to those situations which supervisors and new employees agree create the most difficulties. The skills acquired will increase confidence, forestall impulse quitting and enable students to cope with work environment problems.

Getting a job is a course that teaches these all important skills. Through involvement in and response to taped lessons, through practice in preparing fact sheets and applications forms, and through participation in group discussions of taped dramatic situations, the student rapidly acquires the ability to handle with confidence the full range of real-life problems that he will encounter when he is looking for work.

Title: **World of Work: Readings In Interpersonal Relationships**

Manufacturer: Webster Division - McGraw-Hill Book Company

Distributor:
Mid Continent Region
McGraw-Hill Book Company

Curriculum Innovations, Inc.
501 Lake Forest Avenue
Highwood, Illinois 60040

Date:
Continuous Publication
Monthly
Continuous Publication Monthly

Cost: $2.95 per student, per school year

Grade Level: 7 - 12

Description of Media: Career Newspaper, issued monthly during the school year

Description of Material:

CAREER WORLD is the exciting, new, up-to-date guide for students in junior and senior high schools . . . an information-packed issue published every month.

Each comprehensive issue features:
Career World Focus — a systematic examination of one or two career clusters compatible with the plans of the U.S. Office of Education and the Department of Labor

The Important You — the guidance features which helps each student find out about himself and his interests.

Zeroing In — information on several specific occupations

The Opening Door — a profile of a minority person who has entered an occupation previously limited or closed

Periscope — how current events are shaping future occupations

Jobs for Students — tips for getting part-time jobs while in school

Q & A — answers to interesting questions from students

The Light Side — puzzles, cartoons, and offbeat jobs . . .

Tapes

Title: **Career Education A Man's Work**

Joe Ludwig
Sales Representative
Educational Development Corp.
Route 5
Osseo, MN 55369
Telephone: 425-4632

Date: 1972

Cost:

Complete program (5 groups)	$397.50
Group I Office & Sales	79.50
Group II Consumer	79.50
Group III Production	79.50
Group IV Structural	79.50
Group V Miscellaneous	79.50

(each has a teacher's guide)

Grade Level: 7 - Adult

Description of Media: Cassette Tapes

Description of Content:

Each of the 5 groups contain 20 job interviews on 10 cassettes with a teacher's guide.

Interview Content: The men interviewed on the job site are neither professional actors nor public speakers. No one prepared canned or eloquent speeches. What they say is an honest reflection of what they think and feel about their jobs. The control element in each interview is the interviewer. He guides the respondent toward answering such questions as:

(a) why he chose such work
(b) how his first job was secured
(c) what training and skills are needed
(d) what apprenticeship must be served
(e) what basic education is required
(f) advancement possibilities
(g) how the future looks
(h) where to find work
(i) what fields require related skills'

Title: **Career Games and Career Development Laboratory**

Manufacturer: Educational Progress Corporation
4900 South Lewis Avenue
P.O. Box 45663
Tulsa, Oklahoma 74145

Distributor: Allen D. Olson

Description of Material:

Daylight Screen - 6 inch, auto stop system, film take-up — eliminates reversing film, light weight, automatic advance, uses cassette tapes

Title: **Sound-page System**

Manufacturer:
3M Company
Visual Products Division
3M Center
St. Paul, MN 55101

Distributor:
3M Business Products Sales, Inc.
1620 East 78th Street
Minneapolis, MN 55423

Cost: $299.00

Description of Media: Audio-visual (hardware)

Description of Material:

Sound page represents a break-through in audio-visual systems. Its mechanics are simple. Its visual and recorder messages can't get out of synchronization. It requires no elaborate filming, processing, projection system or carrel. Here's what it's all about. One side of a sound page is plain, white bond-like paper which can be imaged by writing, drawing and typing, by using a mimeo, copier, paste-ups, or by just about any other conventional method. The other side isn't plain at all. It's coated with a magnetic film which can hold up to four minutes of recorded sound — instructions, explanations, questions, even music and special effects. Sight and sound are permanently locked together on one sheet of "paper", ending forever synchronization problems.

Title: **Sound-on-Slide Projector Recorder**

Manufacturer:
3M Company
Visual Products Division
3M Center
St. Paul, MN 55101

Distributor:
3M Business Products Sales, Inc.
1620 East 78th Street
Minneapolis, MN 55423

Cost: Model 625 AGA $699.00

Description of Media: Audio-visual (hardware)

Description of Material:

A system that allows a person to develop his or her own sound-like program. For each 35mm or 2 x 2 slide, you record the information relating to that slide on a disc that encircles the slide. The picture and message are locked together with no problems of synchronization. Sound-on-slide empty straight trays (6 per case) $19.20 per case. One gross of sound-on-slide discs $105.00. Commercially prepared career trays are available also.

Title: **Caramate Automatic Cassette**
Sound-Slide Projector

Manufacturer:
Singer-Graflex
3750 Monroe Avenue
Rochester, NY 14603

Distributor:
Society and Mankind
Two Holland Avenue
White Plains, NY 10603

Century Communications Corp.
119 North 9th Street
Minneapolis, MN 55403

Cost: $279.50

Description of Media: Audio-visual (hardware)

Description of Material:

Rear screen projection, 9" x 9" screen, single unit for showing carousel slides and automatic pulse cassettes. Headphone jack model no., 805-S1. Fully automatic or push-button for transistorized amplifier.

Title: **Organizer Bins**

Manufacturer:
Fidelity Products Company
705 Pennsylvania Avenue S.
Minneapolis, MN 55426

Distributor:
Fidelity Products Company
705 Pennsylvania Avenue S.
Minneapolis, MN 55426

CAREER INFORMATION SYSTEMS

Minnesota State Career Resources

Advancement in technology has now made its impact on career education through the use of the computer and telephone. The computer, via a state-wide communication network, now makes it possible to instantly access information on occupations, four-year colleges, two-year colleges, vocational schools, scholarship and financial aid. Telephone hotlines for the University of Minnesota, state college system and state area technical-vocational institutes makes it possible to obtain information about educational opportunities.

COMPUTERIZED CAREER INFORMATION

The Guidance Information System has been developed by the Time Share Corporation, and is operated as a component of the Minnesota Educational Computing Consortium (MECC). MECC is officed at 4925 Sather Street, St. Paul, Minnesota 55113.

Specific information about the system can be obtained by contacting Dr. Ken Brumbaugh at 296-2789. Operationalizing the system requires the lease or purchase of a computer terminal, access to a telephone line (separate line preferred), power outlet and the purchase of the Guidance Information System Study Guides ($2.00 per copy).

The Guidance Information System allows the student to examine large data files stored in a computer, and to study the ways in which their reasons for choosing schools and occupations effects the variety of opportunities available to them. At a terminal, usually located in or near the Career Resource Center, a student and/or his counselor may type specific instructions requesting the desired information. The computer responds to each question by typing the appropriate responses from its centrally stored data files.

By relaying instructions to the computer, it will send back instantaneous responses. This communication method allows the student to get instant feedback, which will aid him/her in the decision making process. Two features of this system that should be emphasized are the rapid speed with which information is returned to the student and vast source of data that is available to be tapped.

The interactive nature of this system is unique, in that it provides the student with an opportunity to continuously change and direct the instructions to the computer. This control allows the decision making to rest where it belongs, in the mind of the student.

This application of technology closes the communication gap between the student with the questions and the computer with its vast factual information, resulting in more effective decision making.

The time saving provided by the Guidance Information System increases opportunities for students and counselors to discuss the significance of this information and its relationship to the student's career planning.

The Guidance Information System is a dynamic tool of technology that will initially promote student inquiry into career planning and significantly enhance the usefulness of other career resources such as the **Occupational Outlook, Handbook, The Dictionary of Occupational Titles,** post-high school training catalogs, and others. The computer functioning in this manner operates as a "data disseminator", allowing the counselor to serve as a "data interpreter" and to assist with the student's academic and personal problems.

Looking to the future development of this computer system, we will see the implementation of Guidance Information System II (GIS II) which was designed to help counselors overcome the problem of managing and maintaining an up-to-date career information system. The GIS II system is an integrated system with a data base of information on the computer, supported by materials which include microfiche or microfilm, sound filmstrips, kits and publications. All of these components are intended to provide meaningful career exploration and decision making experiences for students.

The following materials provide useful information about computer assisted programs:

Career Guidance: An overview of Alternative Approaches, Robert E. Campbell and Louise Vetter Information Series 45, Vt 013 479 ERIC Clearinghouse on Vocational and Technical Education. 1971.

Computer-Assisted-Counseling, Super, Donald E., Teacher's College Press, Columbia University, 1970, pp. 133.

"Computer Based Systems for Career Guidance and Information: A Status Report", Arthur M. Kroll, **Focus Guidance** Vol. 5, No. 10, June, 1973.

Computer-Based Vocational Guidance System, U. S. Department of Health Education and Welfare — Office of Education, Washington, D. C., 1969.

TELEPHONE HOTLINES

Telephone Hotlines currently provide information about:

1. Current openings — waiting lists
2. Length of Course
3. Starting Date
4. Description of Course
5. General Information about the Institution
   Phone Number
   Address
   Counselor's name
6. Entrance Requirements
7. Information on helpful school courses
8. Job Opportunities

Telephone inquires about the University of Minnesota, State Colleges and Minnesota Area Vocational Technical Institutes can be made by telephoning:

University of Minnesota
(Minneapolis Campus)

1-800-652-9021 (Toll-free State-wide Number)

MINNESOTA DEPARTMENT OF EDUCATION
PUPIL PERSONNEL SERVICES SECTION

Career Guidance Information Bibliography

This section includes portions of the 1974 revised version of A Bibliography of Selected Career Guidance Materials prepared by J. H. Kerlan, Consultant, Pupil Personnel Services Section, Minnesota Department of Education. It was selected particularly for use in this guide for its coverage of:

1. General Bibliographies of Materials
2. Educational Directories and Guides
3. Vocational Technical Schools
4. Minnesota State Publications
5. U. S. Government Publications
6. Financial Aid
7. Military Sources

Note: Each of these sections has been edited by the authors to avoid duplicating material found in other parts of this guide.

General Bibliographies of Materials

— **Audio-Visual Guidance Materials.** An Annotated Bibliography and Directory of Minnesota Sources, Minnesota Department of Education. 1969. Out of print.

— **Directory of Occupational Titles.** Volume I and II, U. S. Manpower Services, Washington, D. C. $9.25.

— **Minnesota Licensed Occupations.** Minnesota Manpower Services, Fourth and Robert, St. Paul, MN 55101. 1971. Free on request.

— **Occupational Literature: An Annotated Bibliography.** Gertrude Forrester, H. W. Wilson and Company, New York, New York. 1971. $15.00.

— **The Counselor's Guide to Occupational and Other Manpower Information.** Bulletin 1421, U. S. Department of Labor, Washington, D. C. 1969. $1.00.

National Career Resources

One career resource that has not been previously mentioned is the ERIC Clearinghouse. Less instantaneous than the other resources mentioned in this section, ERIC uniquely provides a service to the educator with a flair for research. The latest information on developing career education programs across the nation can be obtained by visiting the professional library on the main floor at the District Administration Building, 360 Colborne.

The description that follows details the ERIC System:

THE ERIC CLEARINGHOUSES FOR CAREER GUIDANCE EDUCATION

The ERIC information system provides a survey on research and other literature in American education. Each of the 17 clearinghouses within the network provides specialized information on a specific project, but also can provide information from the entire system.

The ERIC Clearinghouse for Career Education and Counseling and Personnel Services are located at the following locations:

In addition, the MDES and CIU provides a career information answering service to the public. Requests can be sent to the above address or called in by phoning 296-3600.
Special mention should be made of two resources that are available by contacting the Minnesota State Employment Service located at 390 North Robert Street, St. Paul.

Career Information Unit supervisor: Tom Weber

Mr. Weber is a valuable resource person to obtain occupational materials published by the government and to use as a speaker.

Job Bank Data: Assistant Commissioner: D. M. Buckner

Mr. Buckner has the authority to release the job bank data (prepared on microfiche) describing the current jobs available on the local labor market. Employer memos do not appear, but general locations do. It should be stressed that this information is released upon written guarantee that it is to be used for educational purposes, not job placement. The microfiche can be mailed out monthly. It may be obtained by writing to the address below:

Mr. D. M. Buckner
Assistant Commissioner of Employment Services
390 North Robert Street
St. Paul, Minnesota 55101

RE: Job Bank Data

Career Education
Northern Illinois University
Counseling and Personnel Services
The University of Michigan

Within each of these clearinghouses there are three basic services:

1. **Research in Education** (RIE)

   A monthly publication containing abstracts, citation and information for ordering documents entered into the system by each clearinghouse. RIE is available from the Government Printing Office, Washington, D. C. 20402.

2. **Current Index to Journals in Education**

   A monthly publication containing listings of articles in about 725 periodicals and journals in education. CIJE is available from McMillan Information, 866 Third Avenue, New York, NY 10022.

3. **ERIC Document Collections**

   All documents announced in RIE and not restricted by copyright may be purchased separately or on standing orders from ERIC Documents Reproduction Service on microfiche or hard copy reproductions. Information may be obtained from EPRS, Post Office Drawer O, Bethesda, Maryland 20014.

THE NATIONAL NETWORK FOR CURRICULUM COORDINATION FOR VOCATIONAL-TECHNICAL EDUCATION

The National Network for Curriculum Coordination for Vocational-Technical Education is organized into a series of regions. Minnesota is in the midwest region along with the following states:

> Delaware, District of Columbia, Indiana, Illinois, Maryland, Michigan, Ohio, Pennsylvania, Virginia, West Virginia and Wisconsin.

Minnesota's representative to the quarterly meetings is Jerome J. Schmehl, Program Planning, Development Section, Division of Vocational and Technical Education, Department of Education, Capitol Square Building, 550 Cedar Street, St. Paul, Minnesota 55101.

The purpose of this network is to serve as a clearing house for career education materials and share in the development of materials, so that member states may assist one another, rather than duplicate their efforts.

An extension of this network is the Minnesota Instructional Materials Center at:

916 Area Technical-Vocational School
3300 Century Avenue No.
White Bear Lake, Minnesota 55109
(612) 770-3943

The center is directed by Joel Daly, and has been implemented to pursue the following goals:

1. Identify state career education informational needs
2. Identify materials that will meet the identified needs
3. Develop new career materials
4. Assist local career projects

FREE AND INEXPENSIVE CAREER RESOURCES

Subscription Service

Free and Inexpensive Career Resources acquisition can be an economical method of obtaining vast quantities of materials at low cost. It should be emphasized, however, that no material can be acquired without cost, as there is always our time (research and clerical) and mailing (envelopes and stamps) that should be considered as a part of the total cost of acquiring such materials. The resources described in this section include subscription services, guides and newsletters that will aid you in the process of keeping your career resource center stocked with current materials. Numerous brochures and pamphlets are also listed and described for easy review. A listing of local, state and national sources of free and inexpensive materials concludes this section.

Title: **Careerdex**

Order From: Career Associates
P.O. Box 2316
New Port Beach, CA 92663

Date: Updating service

Cost: $95.00

Grade Level: 9 - Adult

Your Job as a Repairman or Mechanic

Title **Guide to Federal Career Literature**

Order From: Superintendent of Documents
U. S. Government Printing Office
Washington, D. C. 20402

Date: 1972

Cost: 45¢

Description of Media: Booklet

Description of Material:

A convenient reference guide to Federal Recruiting literature. It contains brief description of 232 publications from 46 different departments and agencies. The pamphlets and brochures listed represent only the principle publications used in nationwide recruiting for college entry level positions. Most entries include: title, date of publication, number of pages, dimensions, geographic location of positions covered, summary of contents, college majors for which brochures is applicable, where to obtain copies.

TITLE: HEALTH AND HEALTH RELATED CAREER EXPLORATION.

DESCRIPTOR: SECONDARY EDUCATION; *HEALTH OCCUPATIONS EDUCATION; *HEALTH EDUCATION; *SELF CONCEPT; DECISION MAKING SKILLS; *CAREER EXPLORATION; *CLASSROOM MATERIALS; INTEGRATED CURRICULUM; DEMONSTRATION PROGRAMS

IDENTIFIER: OREGON

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 92P.; RELATED DOCUMENT VT 102 995 IN THIS ISSUE.

ABSTRACT: THE PROGRAM WAS DESIGNED TO INTEGRATE CAREER EDUCATION INTO THE EXISTING HEALTH EDUCATION PROGRAM. TWO TYPES OF MATERIALS WERE UTILIZED: THOSE THAT PERTAINED TO STUDENTS' UNDERSTANDING OF THEMSELVES AND THE DECISIONMAKING PROCESS (APPLICABLE TO ALL AREAS OF CAREER SELECTION) AND THOSE PERTINENT TO A SPECIFIC HEALTH FIELD. THE HEALTH EDUCATION PROGRAM IS AN OREGON STATE REQUIREMENT FOR ALL HIGH SCHOOLS. THIS "HEALTH CAREERS EXPLORATION II" BOOKLET IS A COLLECTION OF MATERIALS ORGANIZED ACCORDING TO THE THREE PROJECT COMPONENTS: SELF-CONCEPT, DECISIONMAKING, AND EXPLORATION. ACTIVITIES AND MATERIALS WERE DEVELOPED AND TESTED AT ROOSEVELT HIGH SCHOOL, PORTLAND, OREGON. EACH SECTION CONTAINS INVENTORIES AND CHARTS FOR THE STUDENTS TO FILL IN THEIR OPINIONS ABOUT ABILITIES AND PREFERENCES. THE EXPLORATION SECTION ALSO PROVIDES FOR SOME PRACTICAL EXPERIENCE ACTIVITIES BY USING PUZZLES, DIAGRAMS, AND EXPERIMENTS IN THE CLASSROOM TO LEARN ABOUT HEALTH PERSONNEL, PROCEDURES, AND TERMINOLOGY. SUGGESTIONS FOR OUTSIDE FIELD EXPERIENCE RESOURCES IN THE COMMUNITY ARE INCLUDED. (MF)

ABSTRACT OF PROJECT #26-001-217

ROOSEVELT HIGH SCHOOL - PORTLAND, OREGON

The Health and Health Related Career Exploration Project, an exemplary program, is designed to integrate career education materials:
(1) pertinent to student understanding of themselves and the decision making process (applicable to all areas of career selection), and (2) those specific to the health area into the existing health education program.

The Roosevelt Health Education program, a state requirement for all high schools, has two primary objectives:

1. to equip young adults in skills which can be utilized in personal decison-making, and
2. to inform young adults of the numerous current health issues which exist individually, community-wide and world-wide.

Therefore, it becomes obvious that the required health course should include the area of career exploration as the basic ingredient of its curriculum.

It has been necessary to develop devices which allow every student to begin functioning at whatever point he or she is. In most cases, it has been essential to help the student understand his or her own concepts of himself or herself. Until a student can identify his or her self-concepts and test their validity, he or she cannot move to any type of successful decision-making, including career decisions.

Once a student knows "where he or she is at", it then becomes necessary for him or her to develop skills in decision-making, so things don't "just happen". Rather, he or she can begin to control his or her own destiny. Therefore, it is required that a student know what the decision-making process includes and that a student can successfully use the tools of decision making.

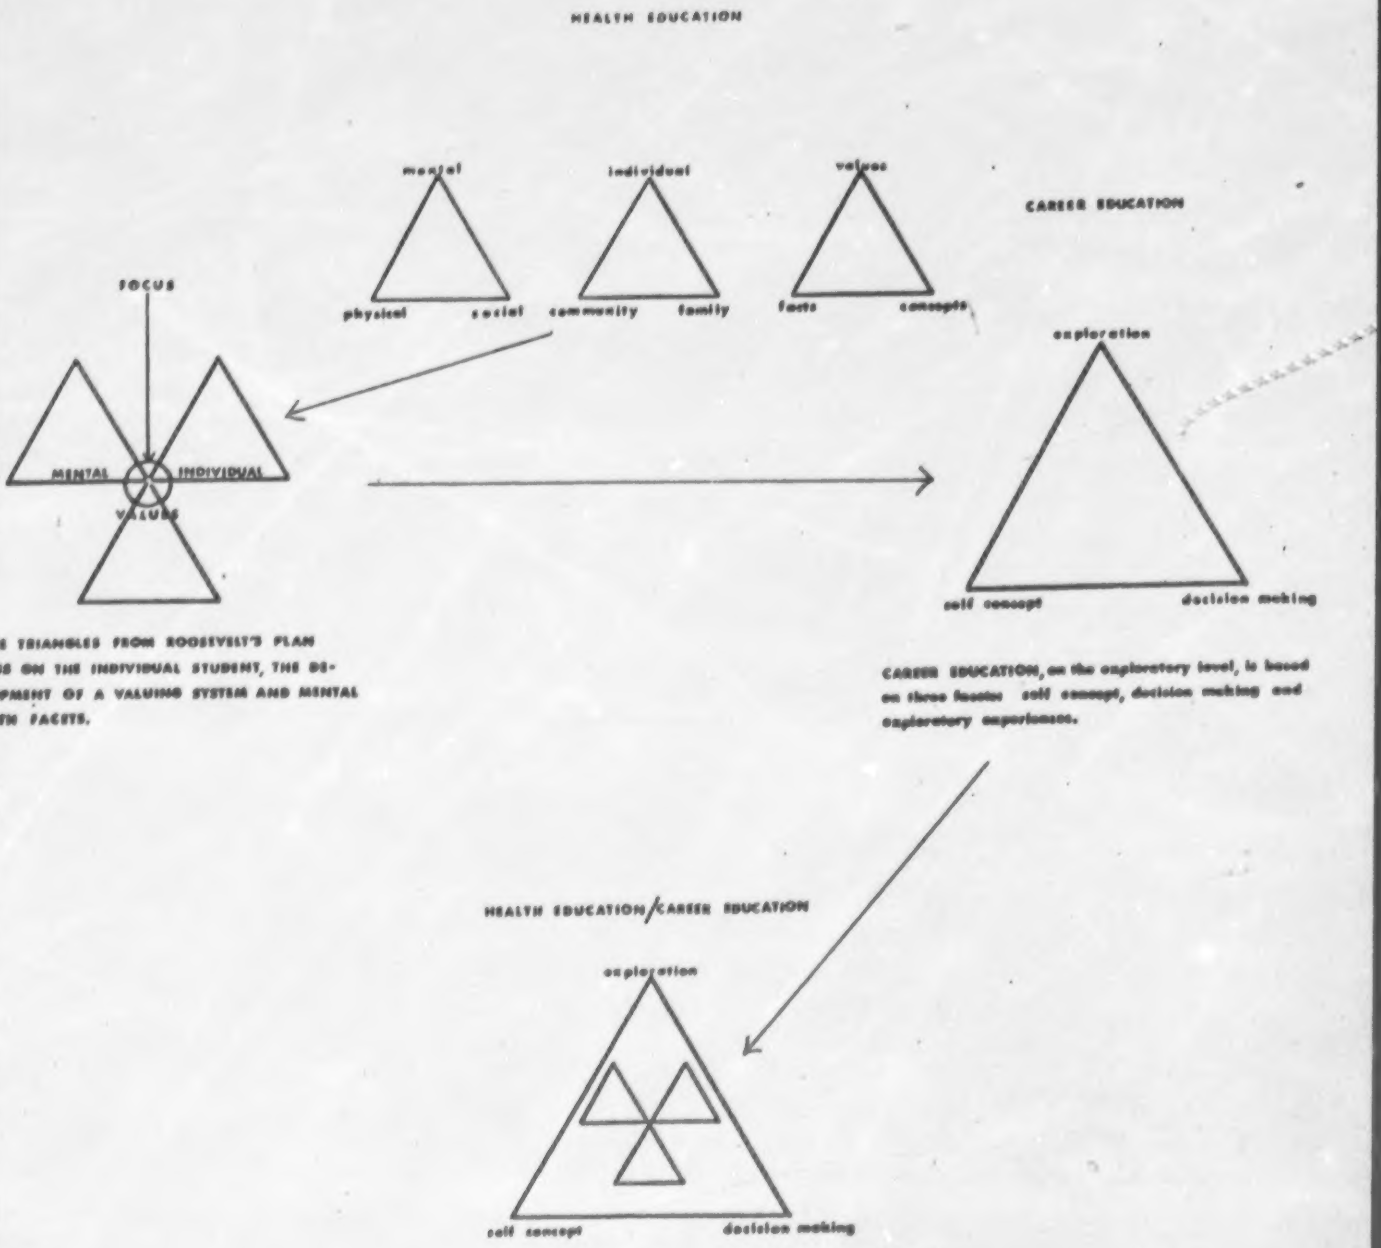
The third area which must be included is career exploration, the actual observation and analysis of information specific to career areas. These include integrated career roles in pertinent curricular areas, use of the Career Information System (computer), field experience exposures, guest speakers, interest surveys (GATB), individual interviews with practicing professionals, use of resource materials, independent and individualized projects and practical activity involvement.

Career involvement, on the exploratory level, is comprised of three primary areas -- self concept, decision-making and exploration.

These areas are directly involved and aligned with the total concept of health education.

As health educators, we believe the exploration level of HEALTH CAREERS is appropriate and imperative; we believe it is a professional obligation.

Graphically the integrated career education/health education project at Roosevelt High School has as its base three health education components. From those components the project has developed as illustrated below.



HEALTH EDUCATION
mental
physical
social
individual
community
family
values
facts
concepts
FOCUS
MENTAL
INDIVIDUAL
VALUES
CAREER EDUCATION
exploration
self concept
decision making
HEALTH EDUCATION/CAREER EDUCATION
exploration
self concept
decision making

SE TRIANGLES FROM ROOSEVELT'S PLAN
CUS ON THE INDIVIDUAL STUDENT, THE DE-
OPMENT OF A VALUING SYSTEM AND MENTAL
LTH FACETS.

CAREER EDUCATION, on the exploratory level, is based on three facets self concept, decision making and exploratory experiences.

When the three career education facets are superimposed upon the health education facets the program becomes an integrated whole. This is what we call the Roosevelt Face of Health.

HOW TO USE THIS COLLECTION OF MATERIALS

This collection of materials has been organized according to project components: self concept, decision-making and exploration. The activities included here are only those which have field tested successfully in the development of the above areas.

The activities included here are not designed as 'one shot' attempts. Rather, they are designed to: (1) supplement an overall health education course, and/or (2) add new impetus to the curricular aspect of health careers.

This collection can be utilized in two ways. First, a simple 'run through' approach can be used. Examine the table of contents and locate a topic which interests you. Turn to the page designated and read through the activity. Secondly, a thorough reading approach can be used. This approach will develop a more comprehensive understanding of the philosophy and curricular models utilized in this project as developed by the staff at Roosevelt High School. It is suggested that if you select the second approach, your reading be directed in the following order:

Overview. 1
How to Use This Collection of Materials 4
Sights on Students. 3
Self Concept. 5
Decision Making 25
Exploration 41

then a perusal of activities

NOTE: This collection of materials does not attempt to imply that activities alone are the end goal of health education. Activities without clearly defined objectives (fitted to your particular course content) are meaningless and time consuming to both students and teachers. No attempt has been made to correlate these to individual district graduation competencies either in health education or career education.

SELF CONCEPT

WHO am I? Where am I going? Why?

These century old questions are exceedingly difficult to answer. They are questions of a complexity matched only by our society.

In educational circles, these questions are translated into more 'meaningful idioms' such as self awareness, personal growth, self identity and, most commonly -- self concept.

At no point in the development of the exemplary project at Roosevelt has our staff attempted to set a clear, closely worded statement of what we feel 'self concept' might mean. Rather we choose to develop for ourselves a workable, flexible definition as follows:

> To us at Roosevelt, 'self concept' means those aspects which deal with sense of self -- recognition of strengths and weaknesses -- defining of values and goals -- feelings for and about ourselves and others and all those items which significantly contribute to the development of a mentally healthy person.

We at Roosevelt believe that these issues are the first embarking point of health education. To explain more thoroughly, knowledge in health education is not directly translated into behavior. Cognitive (fact) knowledge alone is not adequate. But as cognitive knowledge is integrated into our personal frames of reference: attitudes, beliefs and values (those ingredients of the affective and action domains), then and only then will health education begin to 'take' and begin to 'make' markable change. Value building, value assessment and value change, in relationship to health education, only become possible when we allow ourselves the risk of confronting our sense of ourselves. Perhaps some specific examples might explain:

> Cognitive, fact laden, tobacco education is meaningless to a fifteen year old if he sees himself as a 'tough teenager' lacking personal goals and only marking time until the day he becomes eighteen and the rights of custom require that his parents kick him out.
>
> Water pollution experiments on local tap and recreational waters are meaningless to a fifteen year old who sees herself destined to have kids, keep house, make ends meet and accept the fact that people downtown or down state must know best when it comes to political pollution issues.
>
> Birth control information (the where's, what's and how's) is meaningless to adolescents of both sexes as long as their cultural surroundings sell the idea that marriage or abortion will correct all mistakes; or as long as their cultural surroundings fail to accept the fact that adolescents are sexual beings with emerging identities, confronted daily by a multitude of conflicting values.

Careers, occupational possibilities, knowledge of the world of work are meaningless to students lacking goals or ideas about their future. Further, for students with unclear present concepts of themselves, projection into the future is frightening and frustrating and often responded to by resentment or indifference.

So then, how does a group of health educators grasp the issues implicit in self concept?

First, by looking at ourselves; seeing what we want; deciding what we're about, setting goals for ourselves and then by taking action. The action steps are risks -- risks that contain elements of both success and failure. But change does not occur or does not begin without the element of risk.

Second, by looking at what we do know about students, we realize: students should be allowed to help set their educational goals; positive attitudes and approaches encourage the learning process; students should be able to meet goals and achieve success; individual student concerns should be encouraged.

Third, by creating a liveable environment with students. The environment should encourage value assessment and clarity. In so doing, it should encourage self examination, motivation, creativity and success. The environment should not be a wonderland where failure is impossible. It should be one designed to evade truth, or anxiety, rather, it should be one which is real, practical and, at times, frustrating. We believe that 'to live successfully' means one must put forth personal effort.

Some practical examples are:

1. Positive reinforcement (e.g. grades given by symbols or points instead of letters).
2. Value clarification techniques (e.g. forced choice leaders, value grids).
3. Communication skills and techniques (e.g. communication games).
4. Assessment of personal strengths and weaknesses for creation of realistic positive self-concepts (e.g. attitude inventories, maturity.

DIRECTIONS FOR SELF CONCEPT ACTIVITIES

The activities included in this section have field tested in the medium to high range as successful classroom tools.

These activities are designed to (1) assist a student in more clearly thinking about him or herself, to (2) to assess personal strengths and weaknesses and, to (3) help identify realistic personal goals.

My Abilities Self Appraisal Inventory and How Do You Feel About Work are from a Portland Public School Publication, *You and Your Abilities* by Pryne, 1964.

Personality Wheels has origninated from a variety of sources both local and national including Dr. M. Giammateo.

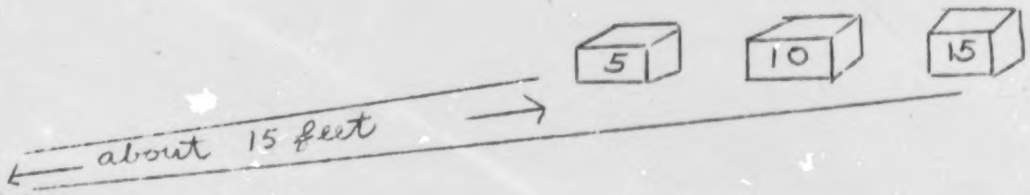
Joshua In a Box was developed at Roosevelt in conjunction with a six minute silent film by the same title --- Stephen Bosustow Productions.

The Inside/Outside Box is from Dr. M. Giammatteo's *Beyond Relevance*. Me At Age Twenty Five was developed for *Careers and You* a Eugene Public Schools curriculum publication.

Other activities included were written at Roosevelt and triggered through a variety of sources.

BEAN BAG EXPERIMENT

Place three equal sized boxes (orange boxes are ideal) in an area outside the view of your classroom. Mark one box with a 5, another with a 10 and the third with a 15. Position the boxes so that 5 is closest to the participant and 15 is furthest away.



Procedure: Students do this experiment one at a time out of view of classmates. Give them a bean bag. Tell them to toss it into any box they wish. They get only one toss, and no further directions. After they have completed the experiment have them individually fill out the response sheet below.

Follow-up: Use the following questions to guide the class discussion toward goal setting concepts and personal importance concepts. (1) What meaning did the number have for you? (i.e. was 15 the best?) (2) Do big numbers always mean the most? (3) Do you think people who choose 5 are the kind who choose small goals for themselves? (4) Would you call those that choose 10 middle of the roaders? (5) Would you call those that choose 15 dare devils? (6) Would you think it would be better to toss the bean bag successfully into 5 or aim at 15 and take the risk of missing?

Variation follow-up: After the experiment is completed give students grades for the day according to their success in performance (e.g. 30 points or an A for successfully getting it into box 15; 25 points or an A for aiming and missing box 15; 20 points or a B for successfully getting it into box 10; 10 points or a D for successfully getting it into box 5; 5 points or an F for aiming and missing box 5.) Tell them that 'that's the way life is' --- you get paid for how you succeed. Such a teacher approach should set the scene for discussions such as 'lack of directions', 'importance of the skill', 'individual differences measured by one standard', etc..., What really is success???

. . . .

BEAN BAG EXPERIMENT Name ____________________

1. Which box did you aim at? 5____ 10_____ 15_____

2. Did you get the bean bag into the box? yes _____ no _____

3. What do you think this experiment might tell you about yourself?

MY ABILITIES

ACTIVITIES	WHAT DO I DO WELL?	WHAT I HAVE ACCOMPLISHED SO FAR. . .	I AM GOOD AT THIS ACTIVITY BECAUSE. . .
At HOME (Activities with my family: chores)			
HOBBIES			
SCHOOL SUBJECTS			
SPORTS			
COMMUNITY (Church, Clubs, volunteer work)			
SCHOOL ACTIVITIES (Projects, Clubs, etc.)			
OTHER TALENTS			

Enrichment Questions

1. How did you feel when you were able to put anything in any of the boxes?
2. Did you have more to write down, but not enough room?
3. Did you find it very hard to put anything down in writing? (Explain)
4. Do you wish you could have filled in more boxes? (Explain)
5. Does this activity give you an idea of "where you are" and where you might want to get to? (Explain)

SELF-APPRAISAL INVENTORY

Mark only those items which you think are like you.

1. I think I will be successful in life.
2. I am too selfish.
3. I think of myself as a person good in sports and athletics.
4. I worry about everything, even when I have no reason to worry.
5. I am happy.
6. I am always wondering what others think about me.
7. I never have trouble getting a date.
8. I am childish in many ways.
9. I am easy to get along with.
10. My feelings are easily hurt.
11. I am somewhat moody.
12. I am probably the best student in my class.
13. I do things without thinking about them first.
14. I am a good dancer.
15. I have quite a few talents.
16. I think of myself as a good "school citizen."
17. At home, I am a general bother.
18. I have many friends.
19. I feel that I am in on family decisions.
20. It bothers me little when I have to recite in front of a group.
21. I have an excellent sense of humor.
22. I always know for sure what the right thing to do is.
23. I am a happy-go-lucky kind of person.
24. I am popular.
25. I see little about myself that's outstanding.
26. I have fewer friends than most boys and girls.
27. I get real pleasure out of making things with my hands.
28. I am confused most of the time.
29. Most people try to avoid me.
30. I have a great deal of confidence in myself.
31. I am really out of place at picnics and parties.
32. When I have a job to do, I get it done.
33. I wouldn't trade places with anybody else in the world.
34. When I want something, I just sit and wish I had it, instead of going out and getting it.
35. I seldom worry, usually taking things as they come.
36. I carry grudges.
37. I generally look at the bright side of things.
38. My teachers like me.
39. I am at ease with other people.
40. I know I will live up to the things people expect of me.
41. I think I am above average in most respects.
42. I am a pretty stupid person.
43. Too often I let others make up my mind for me.
44. I am usually a leader in clubs.

45. I contribute little to team work.
46. I am useful to have around.
47. My personality is uninteresting.
48. I usually reach my goals.
49. At home, I cooperate with my parents and feel that I am a help to them.
50. I am fairly popular.
51. At picnics and parties I enjoy myself more than most people.
52. I am able to do many things well.
53. I "lose my head" easily.
54. Most of the time I am angry with myself.
55. I am a decent sort of person.
56. I have little confidence in myself.
57. I know I can always take care of myself.
58. The world is a decent place for me.
59. I feel at home wherever I am.
60. I think of myself as a person with no special talents.
61. I am only afraid of things when I have good reason to be afraid.
62. I am pretty smart.
63. I lack self-control.
64. I will go to a good deal of trouble to help someone else.
65. I think I have disappointed my parents in many ways.
66. I try to understand people and why they do things.
67. I can usually stick to my work until I have finished it.
68. I am even-tempered.
69. I am pleased with the way my life is going.
70. Some teachers like me.
71. I am a bundle of nerves.
72. I think I am a person with little sense of humor.
73. I have no talent in sports or games.
74. I am so far from perfect, it's not even funny.
75. I am a poor student.
76. I make it hard for people to be friendly with me.
77. The opposite sex finds me a bore.
78. I have a lot of self-control.
79. I have little trouble getting started on the things I have to do.
80. I am able to make decisions.
81. I am always afraid someone is going to make fun of me.
82. I am easily discouraged.
83. I can take criticism without resentment.
84. I am not the person I would like to be.
85. I think I understand myself pretty well.

PERSONALITY WHEELS

ACTIVITY: By using these wheels, you can find out more about yourself - who you are, why you are the way you are, how you are, and so on. These directions will tell you what to do for each personality wheel. Put you name on each sheet.

1. On one wheel title it What am I? in the center of the wheel. Write an adjective on each spoke that describes your personality. Be specific - instead of "nice", write generous or sincere, or honest, etc.

2. Give another wheel to a friend after putting the title, What am I as ________ sees me?, in the center of the wheel. Ask your friend to write an adjective describing your personality on each spoke. Compare them - are there differences?

3. On the next wheel title it Why I am What I am in the center. Write 10 people and events (one for each spoke) which have been the greatest influence on your life -- people and events which have helped you to be the kind of person you are.

4. Next, title a wheel How am I What I am? in the wheel. On each spoke write a key verb which describes the way you behave. Remember, behavior reflects through actions the kind of people we are. Use specific verbs that are typical of how you do things.

5. For the next wheel, you need to be in a group of 10 people or less. The title for this wheel is What am I as the group sees me? Each individual in the group will give each other an adjective that describes him/her. Be specific and be POSITIVE!

6. Look over your wheels and evaluate them by answering the following questions:

   WHAT AM I?

   1. Was it hard for you to write 10 adjectives that describe your personality? Why or why not?
   2. Did you discover anything new about yourself? What?

   WHAT AM I AS ________ SEES ME?

   1. What did you learn about yourself from other people's feedback?
   2. How did other people's remarks make you feel about yourself?

   WHY I AM WHAT I AM

   1. Was it hard for you to think of 10 people or events that are important to you? Explain
   2. What do you think your life would be like if these 10 people or events had never been a part of your life?

PERSONALITY WHEELS - continued

HOW AM I WHAT I AM?

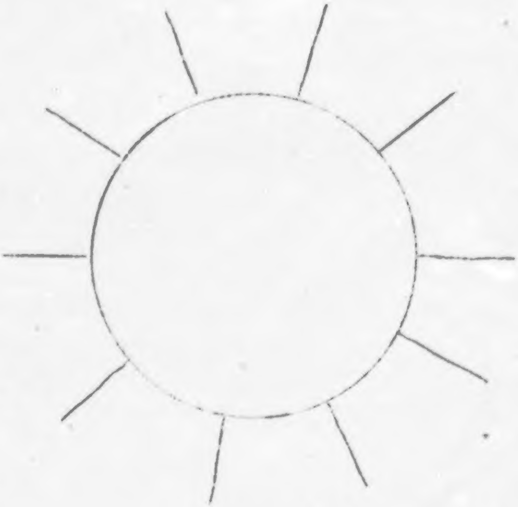
1. Do you like all of the verbs which you put on your spokes? Which one do you like the best? Which one do you feel you need to change immediately?
2. Which verb do you think a family member would take out of your spokes? What verb would they replace it with?

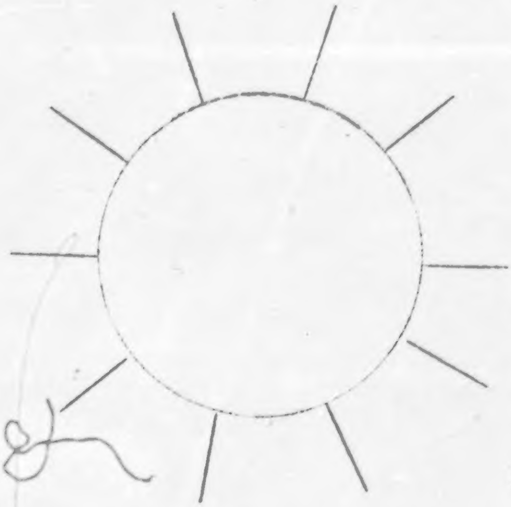
WHAT I AM AS THE GROUP SEES ME?

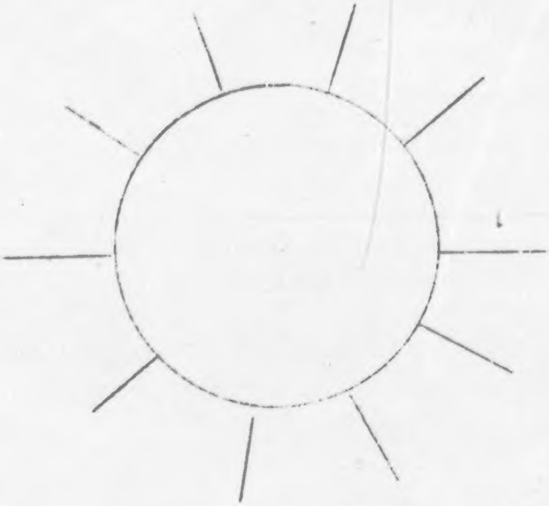
1. Do you believe the adjectives the group gave you were honest? Why or why not?
2. Did the group make you feel as though you were an important person to that group? How?

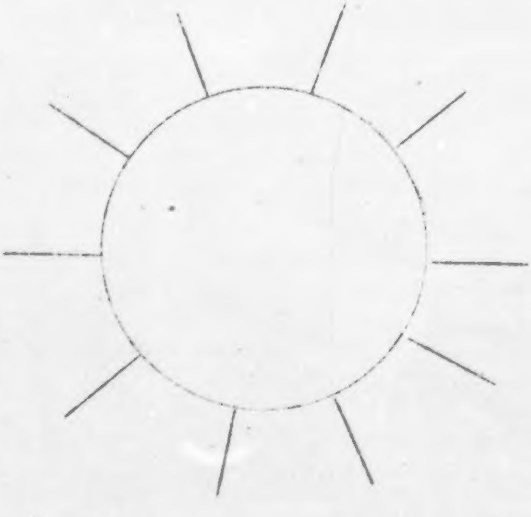
EVALUATION QUESTION:

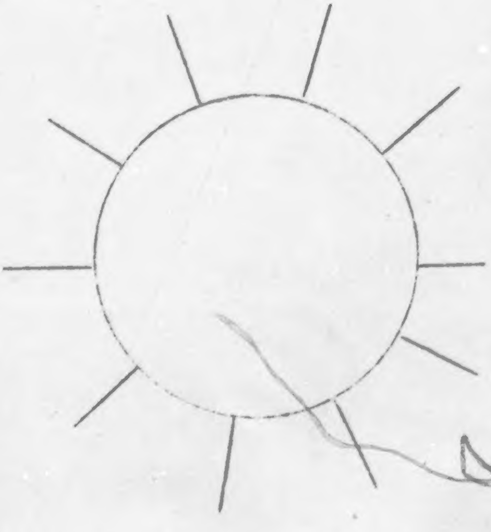
How did the Personality Wheels Tool help you? For example, do you see yourself in a new way now or have you thought about things about yourself for the first time while using the tool? Explain in detail.











JOSHUA IN A BOX

INFORMATION:

When confined, man seems to have an instinctive need to rebel. When this confinement seems permanent, people tend to react in many different ways: some get angry, some give up, some become frustrated, etc. Sometimes, trying to escape from something can become a challenge, and once the escape has taken place, then there is a sense of loss as there is no longer any challenge to face. Some people find that complete freedom can create frustrations and tensions; for them the security of limits is necessary for protection and well-being.

ASSIGNMENT:

After viewing the film "Joshua in a Box", answer the following questions:

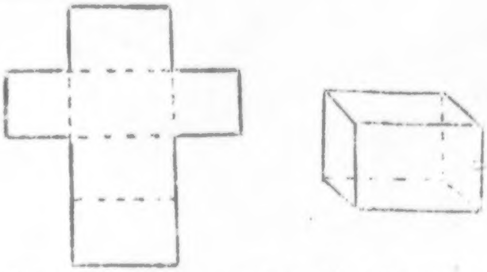
1. What is Joshua's predicament?
2. How does he try to solve his problem?
3. Describe Joshua's behavior when he is in the first box.
4. What emotions do you think these behaviors convey?
5. How does Joshua feel when he first gets out of the box?
6. What happens to Joshua's feelings after he has been out of the box for a minute.
7. Describe a situation in your own life which resembles Joshua's predicament. Who or what were you trying to escape? (Who or what had you boxed in? - remember, sometimes it is us who box us in.) How did you feel when you succeeded?

INSIDE/OUTSIDE BOX

ACTIVITY

We all have feelings and thoughts that we are willing to share with many people. We all also have feelings and thoughts which we would prefer to share with only one other person or even with no one.

Make a box with the paper you are given.



On the outside sides of the box place words (cut from magazines) pictures or phrases that tell about you. They should be those things you are willing to share with others.

On the inside put words, pictures or phrases that tell about you. They should be those things you want to share with one person or with only you.

- -

EVALUATION

1. When I looked at the outsides of other peoples' boxes and then at mine, I . . . . .
2. Whan I compared my outside box to my inside box, I discovered . . . . .
3. If I were to make another box like this one year from now, I think . . . . .
4. One new thing I learned about me was . . . . . .

HOW DO YOU FEEL ABOUT WORK?

Circle the letter which corresponds closest to how you feel about these statements:

A AGREE N NEUTRAL D DISAGREE

A N D 1. All young people need to work to learn the "real value of money."

A N D 2. Parents expect their children to be interested in the occupations they (the parents) like or approve of.

A N D 3. It would not be acceptable to me to go into an occupation with no chance for advancement.

A N D 4. A wealthy person still needs to work to feel worthwhile.

A N D 5. Only a few very lucky people enjoy their work.

A N D 7. A woman's life can revolve around her occupation.

A N D 8. A woman's place is in the home.

A N D 9. I would not feel right being financially supported by my parents after I am 21.

A N D 10. I would not feel right being financially supported by the government after becoming an adult. (welfare or unemployment).

A N D 11. I am concerned about what type of work I will do.

A N D 12. The choice of one's work is one of the most important choices in one's life.

A N D 13. When an adult is out of work, he really begins to question his worth as a person.

A N D 14. One of my main concerns is to get a high paying job.

A N D 15. I could accept the idea of the set up where the man stays home and takes care of the kids and the house while his wife is the breadwinner.

A N D 16. I expect to work until I retire at 60 - 65.

A N D 17. I am aware of the job opportunities that are available to me.

A N D 18. Most adults I know work only for money.

A N D 19. In this society at this time one of my choices (a real possibility) is for me to not have a job.

A N D 20. In my community it is becoming more acceptable for boys to be artists, musicians, or craftsman.

A N D 21. I would have to work to feel like I was contributing to society.

A N D 22. If you make enough money to provide food, clothing, and shelter, you would be satisfied with your job and not try to move to a higher paying job with more prestige.

A N D 23. The work that you do at 25 is probably the same type of work that you will do at 45.

A N D 24. Society places greater value on work that contributes to the welfare of people such as a social worker, than it places on work that produces a product such as a mill worker.

A N D 25. After establishing myself in one job I would change jobs in order to continue to be challenged.

A N D 26. An adult that changes jobs often is considered unstable or immature by society.

A N D 27. Individual work done with one's hands is the most personally rewarding work.

A N D 28. I want to have a better paying job than my parents.

A N D 29. I want to have a higher status job than my parents.

A N D 30. The people I work with are more important to me than the actual jobs I perform.

A N D 31. I know enough about myself to be able to choose the type of work I would be successful in.

A N D 32. I don't feel I have to decide on one occupation to do for the rest of my life -- I want to have different types of jobs throughout my life.

A N D 33. Work is something that you spend time doing and you may or may not get paid for doing.

A N D 34. Crafts and making things with your hands are becoming more popular but they will remain hobbies and not become actual jobs which people earn their living by.

A N D 35. If the United States goes to a guaranteed annual income, I would choose to stop working.

A N D 36. Most people would work at a paying job even if they didn't have to support themselves by working.

A N D 37 If a healthy man doesn't work, he is classified as lazy, worthless, or a parasite by American society.

A N D 38. Most persons work only to earn money to do the things they enjoy doing in their leisure time.

A N D 39. All persons have an obligation to work at a job that contributes to society.

A N D 40. If people weren't working, they wouldn't know what to do with themselves.

A N D 41. Women have more freedom in their choice of work because they can just do what they want, whereas, men must worry about getting a job that will support their families.

A N D 42. Hippies are just taking time out from living mature, productive lives. They will eventually settle down.

A N D 43. The purpose of all education is to give people skills that they will need for meaningful employment in the future.

A N D 44. If I were assured of a job that I would enjoy doing and could make a living at, I would quit school before high school graduation.

A N D 45. Teachers, counselors and school courses are among the most important influences in my decision of choosing a job.

A N D 46. School only prepares people to go to college.

A N D 47. I feel there is a direct relationship between how well I do in school and how well I will do when I start working.

A N D 48. The purpose of high school education is not job training but training in how to understand and adjust to life in such a complex society as ours.

A N D 49. I understand the relationship between what I am learning in school now and the kind of person I'll be in the future.

A N D 50. High School students are under a great deal of pressure to decide what type of occupation they will go into.

A N D 51. School is to young people as work is to older people -- drudgery.

A N D 52. It is more important that a man get job training than a woman.

A N D 53. I have an idea about the type of work I want for the rest of my life.

A N D 54. Preparation for a better job is the only reason to go to school after high school.

A N D 55. High schools could be improved by making them more directly related to job training.

A N D 56. It is important for the future of my family to have two cars, a boat, and a big house.

THE TYPICAL VS. THE IDEAL

ACTIVITY:

1. Write a paragraph describing your last school day (if not yesterday) from the time you got up until you went to bed that night. This is a typical day.

2. Write a paragraph making this typical day the most ideal, dream-like, everything-you=have-always-wished-could-happen-in oneday, kind of day you can imagine.

3. Now write a paragraph describing how you might have made you typical day better. (be realistic, some things we can change, somethings we can't).

LETTER TO MYSELF

Write a letter to yourself. It should be about a page or so long so that it can include what you think are important ideas or feelings about yourself. Make certain to date it with today's date.

So that you can get started perhaps you might include some of the following ideas or feelings:

1. How are things today? How do you feel -- what's going good, what might be going bad.
2. What things have you been doing lately. Some special interests -- new hobbies -- unusual happenings.
3. Who is important in your life right now? Family -- friends -- yourself.
4. Where would you like to be right now? Be as descriptive as you can.
5. When will you achieve just one goal for yourself? What is it?
6. Why are some things special to just you? Music -- hobbies -- sports.

Fold your letter. Seal it, or staple it shut. On the outside make a unique symbol that means you. You will use the symbol later in the year to identify your letter, so mark it down or make certain you remember.

ME: AT AGE TWENTY FIVE

All people think ahead to what might be for them in the future. Much of their dreams never happen but often the dreams lead to plans and happenings. Think seriously and write short essays after each section below. Pretend you are 25 years old. Take a look at yourself as you might be then. If not enough space is provided to write use the back of this sheet or another sheet of paper.

Name a job that you think you might be doing. Dont' say you "don't know," of course you don't really know but pick something. Tell what you do on this job, what kinds of people do you work with (if any), what do you like about your work, what don't you like. Are you tired when you get home? What kind of a worker are you? Try to b fairly accurate in your answers. If you tell me you are going to be a librarian making a million dollars a year I will doubt seriously that you have thought very far. Find out how much a person makes who has the job you chose. Be realistic.

Look at yourself "at home" at age 25. Where do you live? What is it like at home? What is your house like? Are you married? Children? Pets? If you have children how are you raising them? What are you doing that your parents did right or wrong? What are your friends like?

No one works all of the time. What do you do for recreation? What are your avocations? Do you attend meetings often? What organizations do you belong to? Do you like sports, music, etc.?

What do you believe in as a person? What are the worst problems our world must face? What things really bother you about these problems? What do you feel has to be done? What are you prepared to do yourself to help? (Note: By the time you are 25 the world's problems may be very different from those of today but pretend they are the same as today.)

Think even farther ahead--age 35. Are you different from you at age 25? What is different? Why?

ME: AT AGE TWENTY FIVE - continued

You have written a great deal about how you see yourself in the future. Now answer the following:

Are you now on the way to what you see for yourself in the future? List three things that are helping you to get what you want for yourself. If you are not on your way, why not? What things are going to keep you from it?

DECISION MAKING

The average citizen would define decision making as the process of selecting from two or more possible choices. Such a definition, although true, is both narrow and naive.

Decision making is a complex process unique to man. It is a valuing, reasoning, solving and behavior directing process. Most importantly, decision making is a personal process.

We, at Roosevelt, believe decision making issues are the second embarking point of health education. To explain more thoroughly, every individual is confronted daily by decisions. These decisions cannot be avoided; one cannot escape from them. Since health education is, in fact, a cross disciplinary study and an applied field of learning which focuses on human concerns and values, 'deciding' is an essential base. 'Deciding' centered on the person and his environs implies both affective and action domains. When decision making operates with skill and relative ease, satisfaction will be reached and individuals will be moved toward purposeful behavior. Behavior of this type is certainly a suitable and desired goal of health education.

How then does a group of health educators set forth a plan to improve decision making skills?

First, by looking at ourselves: seeing that we are confronted daily with decisions; realizing that our decisions are sometimes clouded by value confusion; and by realizing that the process of valuing is in fact a process of constant growth.

Second, by looking at what we do know about students, we realize: students are confronted daily by decisions; they are frequently asked to make decisions for which they have no clearly formed values; they are confronted through mass media by a multitude of diametricially appossed values; as persons they wish to make decisions regarding the purpose and direction of their own lives.

Third, by creating a real life environment with students. The environment should encourage questioning, confrontation, and a fair share of the decisions to be made and lived with. The environment should also encompass the elements of personal values, acquisition of information and practice.

> The making of decisions begins, first and foremost, with the individual --- by a recognition, evaluation and assessment of personal values. Since people are individuals who possess a variety of personal values, many times on the same topic or issue, the decision achieved will at times differ. Thus the individual

person who is able to use personal clairty of values will make unique decisions suited to him or her.

In addition to clairty of values, the process of decision making requires the acquisition of information. That is, acquisition in the form of (1) gathering information and (2) evaluating the credibility of information.

And finally decision making requires the use of practice. Such practice should follow the course of identifying reasonable alternatives, appraising (or estimating) probabilities, or assumptions, ultimately choosing and subsequently evaluating.

These steps lay the groundwork for personal, human decisions. They are the methods of directly addressing ourselves to the issues and long time problems of health-related behaviors.

Some practical examples are:

1. Student written objectives at the beginning of each unit. This normally guarantees that class activities will be relevant. It also 'forces' students to accept responsibilities for their own education.
2. In-class environments are created in order to practice decision-making skills as they develop, (e.g. family experiments by creating 'classroom families')
3. Students are encouraged to utilize decision-making skills and valuing systems to resolve personal daily problems, (e.g. family and dating relationships.)
4. Analysis and evaluation of products and services specific to health as ongoing techniques utilized throughout the course, (e.g. newspaper reports, advertising claims, consumer selection of across-the-counter drugs).
5. Students are encouraged to use the 'outside world' as a classroom specific to health careers, (e.g. identify resources available in the communities; ambulance services, V D clinics, Family Planning Center).

DIRECTIONS FOR DECISION MAKING ACTIVITIES

The activities included in this section have field tested in the medium to high range as successful classroom tools.

These activities are designed to cut across the broad range of health education curriculum components so that the individual student can (1) assess his or her personal relationship to decision making situations and (2) gain insight into the multitude of conditions which ean affect career opportunities (both health and non-health related).

It is Always Right to Be Right is a short 8 minute color film put out by BFA Educational Media.

Occupational Preferences is an ideal activity for students to use in comparison with their own parents responses. It is particularily beneficial in triggering discussion on sex-role career opportunities, and equal opportunity employment.

All activities in this section have originated at Roosevelt. All can be easily integrated into a traditional or non-traditional health education program.

- Theory into action?
  - How do you usually react when your immediate goals are blocked????
    - By making a chart like the one below, use your experiences during the last week to evaluate your personal conflict reactions.

Conflict Feeling	Physical Results	Cause	How Resolved or Solved

FOLLOW-UP EVALUTATION:

- Which column of the chart was most difficult for you to complete?
- Can you explain why?
- Does your chart indicate any additional information which you need to develop about yourself?
- Do you think your chart is typical of most people your age? (compare with a neighbor)
- What are typical sources or causes of teenage conflict?
- What are some of your pet conflicts?
- What do you do when your conflict seems unsolvable?
- What should you do?

OCCUPATIONAL PREFERENCES

From the list below identify your preferences, Female (F), Male (M), or both (B) for these particular occupations. Which sex do you think should be doing the job?

_____ Accountant
_____ Advertising Manager
_____ Air Traffic Engineer
_____ Animal Doctor
_____ Announcer (radio or TV)
_____ Appliance Service
_____ Architect
_____ Athlete (Professional)
_____ Attorney
_____ Bill Collector
_____ Bricklayer
_____ Bus Driver
_____ Business Machine Operator
_____ Butcher - Carpenter
_____ Construction Machine Operator
_____ Cook
_____ Custodian
_____ Dentist
_____ Detective
_____ Disk Jockey
_____ Doctor
_____ Electrical Worker
_____ File clerk
_____ Fireman
_____ Floor installer
_____ Funeral Director
_____ Garbage Collector
_____ Gunsmith
_____ Hospital Attendent
_____ Hotel Manager
_____ Instrument Maker
_____ Jeweler
_____ Key Punch Operator
_____ Lawyer
_____ Lineman (telephone)
_____ Machine Tool Operator
_____ Mail Carrier
_____ Meat Packer
_____ Mechanic
_____ Medical Technologist
_____ Miner
_____ Minister
_____ Newspaper Reporter
_____ Nurse
_____ Office Clerk
_____ Painter (house)
_____ Pharmacist
_____ Pilot (Commercial Airlines)
_____ Plumber
_____ Printing Press Operator
_____ Roofer
_____ School Counselor
_____ School Principal
_____ Sheet Metal Worker
_____ Teacher, Elementary
_____ Teacher, High School
_____ Telephone Operator
_____ Traffic Manager
_____ Truck driver
_____ Typist
_____ Vending Machine Operator
_____ Welder
_____ Welfare Worker
_____ X-Ray Technician

MONEY CAN MAKE THINGS HAPPEN

Information: We have spent considerable time throughout the year discussing and evaluating the needs of other people. It is obvious that our personal needs are not always the personal needs of the majority of people.

Activity: Listed below are areas of health concern. Each is involved in research, education and treatment Each area needs and deserves money to continue their programs. Let us say you have $50,000 that you want and must give to one or two of these areas.

1. Which area would you choose? (You may choose two, but no more)

2. Why do you think that your particular selection is most important?

3. How would you wish the people in your chosen area to spend the money?

4. What are you hoping the money in your area (or areas) will do for other people?

Remember: The decision you are to make is a big one. It requires thought and consideration. It may be a decision you will face in the future.

Areas:

- Emphysema
- Venereal Disease
- Kidney Disease
- Health Education
- Red Cross
- Pollution Control
- Tobacco
- Mental Health
- Quackery
- Heart Disease
- Planned Parenthood
- Epilepsy
- Cerebral Palsy
- Drugs
- Alcohol
- Mental Illness
- Population Control
- Leukemia
- Arthritis
- Cancer
- Hunger & Poverty
- Cystic Fibrosis
- Health Service Clinics

PUNCH IN - PUNCH OUT

Information: This activity should help you identify how important work is to you, how overwork may affect you, and how you personally feel about the possibility of remaining or becoming a work-driven person.

Activity:

1. In order to evaluate how much time is spent on work in your surroundings answer the following items:

   a. Watch and ask questions in your home environment for two days. Then complete a chart like the one below:

PERSON	AMOUNT OF WORK	TYPE OF WORK

   b. Compare your chart with a classmate. List differences or similarities.

   c. Do you think work, at your home, or on the job, is fairly divided? Why or why not?

   d. Do you believe there is such a thing as 'women's work' and 'man's work? (i.e. it is unmanly to cook and unwomanly to do yard work?)

2. In order to analyze the affects of overwork complete the following:

   a. Interview three adults, list what they believe are the affects of overwork (identify).

   b. List what you believe are five effects of overwork or excessive work.

   c. Call the Oregon Heart Association. Ask them to describe the 'typical' heart attack victim.

3. In order to analyze the effects of the inability to work or get a job, interview and evaluate as described below:

   a. Interview three adults. Ask them if they could describe for you what they believe are the effects of not having or not being able to have a job. (or employment office)

b. List five negative effects of not having or being able to get a job.

c. Write three 'I Learned' statements as a result of #a and #b above.

4. Now see if you can put together your feelings and attitudes concerning overwork.

a. List three situations in which you have personally felt the negative effects of overwork.

b. In a short paragraph explain alternatives which you believe could take the place of the negative effects listed in #a above.

c. Explain what you think you might be able to do to assist someone you care about who is overworked.

Employers many times claim or say that excessive weight (or even excessive underweight) is an employment problem.

In November of 1974 a high scorer on the civil service exam was fired after two weeks in a receptionist job for being fifty pounds overweight. She complained to the Department of Human Rights.

1. Do you believe her complaint is justifiable?

2. What would you do if you were in her situation?

3. What would you do if you were her employer?

4. Can you list several jobs which you believe could not allow overweight employees? Justify your answer.

5. Can you list several jobs which you believe could not allow excessive underweight employees? Justify your answer.

6. How do you define the word excessive?

Now weigh yourself in. Find your age, height, frame and suggested weight on the chart. Compare yourself to the chart recommendations. Evaluate your present weight by completing the following:

7. Were you hesitant to 'weigh in'? If so, why?

8. Are you above your listed weight or below it? How much either way?

9. Do you feel that you really need to do something about your weight?

10. If so, what? Make some practical suggestions.

FILM: "IS IT ALWAYS RIGHT TO BE RIGHT"?

After viewing this film, answer the following questions for evaluation and clarification.

1. Describe the film.
2. Is it always right to be right? Why or why not?
3. What happens when everyone thinks he is right?
4. Why is it hard for some people to admit they are wrong?
5. How can one change an unproductive argument into a discussion in which an involved can learn?

/

Alcohol use creates some very real problems for both employers and employees. Listed below are four work situations. Read each and then react to what you believe should be done (1) if you were the employer and (2) if you were the employee.

1. A forty year old executive is known to be a big boozer. All his colleagues have for years complimented him on his ability to hold his liquor. Over the past four years however his drinking seems to be interfering with company business. He is late getting back from luncheon meetings. He does little work in the afternoon although his sales have not dropped off--in fact they have increased. His secretary upon questioning says that yes, he does keep a bottle in his desk.

   Employer response:

   Employee response:

2. A twenty six year old school teacher is known to drink on the job. A fellow teacher has discussed this with several faculty members in a gossiping sort of way. Students are now talking throughout the school about the teacher.

   Employer response:

   Employee response:

3. A prominent entertainer is known to drink heavily. He or she is still able to perform and fill each nightly show. Musicians and band members have complained recently that it is becoming increasingly difficult to cover for the singer's mistakes or errors.

   Employer response:

   Employee response:

4. A automobile mechanic recently has been unable to finish promised repairs on time. Several of the customers have complained to the service representative. Several fellow mechanics know that he keeps a bottle in his tool kit. A car which was in for a transmission repair a week ago has just broken down on the freeway. After towing it into the shop it is found that the transmission was never repaired.

Eomployer response:

Employee response:

WHO WOULD YOU CHOOSE????? - Doctors

The term 'doctor' was once used to mean a learned person, a teacher. Today the term 'doctor' is applied to many fields -- most of which require a specific course of study. Listed below are a variety of doctors. In the left column identify a dental surgeon, a veternarian, a medical doctor, a dentist and a medical officer. In the right column identify as many 'doctors' as you can. A dictionary may help.

________________ 1. M.D. ____________________________

T.V. GUIDE

Information: This activity should help you evaluate the use and impact of television in your own home. It may also help clarify for you the relationship which your family members have with the 'magic box'.

Activity:

1. In order to evaluate how much television is used in your surroundings make a list of the following tonight:

    a. T.V. channels watched at your home in one evening.

    b. The average amount of time each member of your family watches T.V. in one evening.

    c. The amount of time the T.V. played in your house without being watched for one evening.

2. Compare your findings #1 with a classmate. Itemize your comparisons below:

3. In order to analyze the effects of television on people, respond to the following:

    a. Define: objectionable, recommended, censorship, influential

    b. List your three favorite T.V. programs.

    c. Explain why you consider these your favorites.

    d. Describe one situation in which you believe a T.V. program could be harmful (consider age, setting, etc.).

    e. Describe one situation in which you believe a T.V. program could be helpful (consider age, setting, etc.)

f. Watch T.V. (not channel 10) for four hours. As you are watching, fill out a chart similar to the one below:

			VIOLENCE		
HOURS SELECTED	CHANNEL	PROGRAM TITLE	MURDER	ASSAULT	MISC. (specify)

g. In one short paragraph explain your findings from #f above.

h. List three things you believe the average citizen could do if (s)he agree with a particular T.V. program.

i. List three things you believe the average citizen coud do if (s)he disagrees with a particular T.V. program.

j. Other than possible violence or possible inappropriate programming, do you see or can you identify any form of stereotyping, prejudices or biases which are depicted on T. V. broadcasts?

For a moment pretend that you are an adult and a parent. From that frame of reference consider the following questions:

1. When should children be told about sex and sexuality? How? Why? By whom? Appropriate ages? Boys and Girls?

2. What role do you believe the school and the church should play in sex and sexuality education? Explain and describe the extent of each in relationship to the home.

3. What practices could you perform and what attitudes could you project in order to help develop positive attitudes toward sexuality in small children? Explain.

4. It has been suggested that future families will need to be licensed. That is, courses may be necessary to prepare adults for parenthood; these courses would even be required. If this were the case, itemize the kinds of things you think should be included in an "Education For Parenhood" course.

EXPLORATION

EXPLORATION

Who made my glasses?

Why am I so short and puny?

How would I know what to do if my Dad had a heart attack tonight?

When will someone teach me something about what's going on out there -- like getting a job?

Where could I find out more about helping other people -- like being a nurse?

What will school really do for me and my future?

These are typical questions that high school students ask. The answers to some are fairly simple, while others are far more complex in nature. All these questions have one element in common. They are questions of wonder -- of concern -- of some level of awareness. They are questions which indicate a desire to explore. This desire is one of the most important keys to all of education.

Exploration at Roosevelt is defined simply as probing and examining areas previously unknown. In the realm of health education, explorations range from: 1) exploring ourselves, 2) decisively using our present and developed skills to 3) real contacts in the 'outside world'. Explorations, individually, do not guarantee health education nor health career education success. They are merely a portion of a total plan of self concept, decision making and exploration.

The Health Career Exploration Project at Roosevelt found, quite early in the process of developing its curriculum approaches, two factors that governed its immediate progress. Had these factors not been acknowledged, dealt with and assimilated into the general plans, the exploratory experiences might have fallen short of the original intentions of integrating health career education into an existing health education curriculum. The first factor combined self concept and decision making. To explain more thoroughly, until a student can understand and develop personal concepts of him or herself and utilize decision making skills, career decisions are impossible. Thus, the base to operate health career exploration truly came in the areas of self concept and decision making. Both areas had to be emphasized so that explorations could occur. The second factor was that explorations had to be well planned and progressive in experience. Explorations had to be individually suited to meet student needs. They had to follow a building block plan to carry each student as far as his or her interests went; from very general to very specific, practical experiences (see diagram page ~~243~~ 75).

How do health educators begin to move programs toward exploration possibilities?

First, assessment of our knowledge: Seeing what we know and don't know about the comprehensive field of health; looking, listening and asking questions.

Second, assessment of our students: by finding out their knowledges, their past experiences, their dreams, their goals and looking realistically at their future possibilities. Standardized assessment tools are not necessarily the best of devices to use. Questioning approaches with students (Who brings those services?, Where are they?) are helpful. Open approaches with students consist of questions like: "What kind of world do you want?", "What possibilities are open to you?", and "What are your limits?"

Third, assessment of resources, such as: community sources, sites, guest speakers, books, reference materials, scholarships, volunteer programs, supporative services, money, etc.

Once these assessments are made, real explorations can be set into motion. Some practical examples are:

1. Students are assisted to acquire information about themselves and their world through exploration (e.g., blood typing, examination of beef hearts, ulcer effect experiments).
2. Acquisition of health skills enables students to explore issues of personal health concern (e.g., thermometer reading techniques; filling out medical history charts as first step in seeing a new doctor; charting correct personal vital signs for accurate comparisons and evaluation needed by health care workers).
3. Through standardized test procedures, students assess their career interests and abilities. Results help develop individualized exploratory experiences.
4. In-class sources and resources are used to provide students with health career information (e.g., guest speakers, brown bag lunch meetings, "Career World," identification of health care workers and specialists, Career Information System computer).
5. Exploratory field experience exposures are provided for all students in the program. These exposures have been developed on a building block plan and are designed to carry students as far as their interests take them. For health career orientated students, these experiences give students real first-hand opportunities to do something about their intended goal.

First, assessment of our knowledge: Seeing what we know and don't know about the comprehensive field of health; looking, listening and asking questions.

Second, assessment of our students: by finding out their knowledges, their past experiences, their dreams, their goals and looking realistically at their future possibilities. For health career orientated students, these experiences give students real first-hand opportunities to do something about their intended goal.

DIRECTIONS FOR EXPLORATION ACTIVITIES

The activities included in this section have field tested in the medium to high range as successful classroom tools.

These activities are designed to initiate interest in career fields --- especially those related to health careers. These activities give students opportunities to (1) gain additional knowledge on professional and paraprofessional persons, to (2) evaluate their present knowledge concerning health terminology and (3) provide real exploration time both within and outside the classroom.

Career Search and Medical Specialists are student puzzles. In Career Search it may prove easiest to provide students with the original word list in order to do the puzzle. See Appendix A. Medical Specialists fits ideally after a review of body system structure and function.

Family Medical Record is a means of exploring ones own family and developing the skill of visiting a new doctor alone for the first time.

Who Would You Choose is again a puzzle and baitable activity aimed at developing skills in identifying types and levels of health practioners.

Temperature is a unqique activity designed to develop personal skill and to develop an awareness of the accuracy needed in health care areas.

I (Eye) Care and Hearing and Speech Aides are samples of independent worksheets which could be developed in a multitude of health areas.

Medical Terminology is an ideal discovery activity for students interested in medical records, librarianship and similiar technical health career fields.

What Are Health Careers All About? and Match Your Abilities to Careers in Health enable students to identify personal interests and lead to direct exploration of a particular health career --- Exploring a Health Career. Matching Your Abilities to Careers in Health was developed with the help of Labowitz's Health Career Series.

Exploration Exposures, Sample Exploration Experiences - Interest Areas and Suitable Resource Materials are resources and guides for health education teachers.

All activities in this section other than Matching Your Abilities to Careers in Health were developed at Roosevelt.

CAREER SEARCH

Twenty nine health career terms, occupations or words associated with careers can be found within this puzzle. The words run from let to right, from right to left, from top to bottom, from bottom to top and diagonally. How many can you find?

MEDICAL SPECIALISTS

Twenty medical specialists can be found in this puzzle. The words run from leftto right, from right to left, from top to bottom, from bottom to top and diagonally. To help you locate them fill in the sentences below. The sentences should give you clues.

1. The specialist most clearly associated the endocrine system is called an ____________________.
2. One who specializes in administering anesthetics so that surgical patients can be put to sleep so that no sense of pain is felt is called an ____________________.
3. A specialist in the field of X-ray is called a ____________________.
4. A physician who specializes in disorders of the nose is called a ____________________.
5. The specialist who works with disorders of the gentiourinary tract is known as a ____________________.
6. Female reproductive system specialist is a ____________________.
7. The specialist who directs the preparation of well-balanced and prescribed menus for individuals is known as a ____________________.
8. The specialists who diagnoses and treats diseases of the nervous system is a ____________________.
9. The specialist who diagnoses and treats diseases of the digestive system is a ________________
10. An ________________ works in the area of rehabilitation of people.
11. An ________________surgeon treats deformities, diseases and injuries of the bones and joints.
12. A ________________ works to repair and restore injured, deformed or destroyed body parts.
13. An ______________ who treat and diagnose body reactions which show hypersensitivity to drugs, foods, animals or other substances.
14. A childrens specialist is known as a ____________________.
15. The specialist who works in the area of surgery is a __________________.
16. An ________________ provides specialized treatment for disorders and diseases of the ear.
17. An ________________ specializes in diagnosis and in internal medicine as distinguished from a surgeon or obstetrician.
18. A _________ologist specializes in studying and interpreting changes in organs, tissues, cells and body chemistry.
19. A ________atrist specials in the diagnosis and treatment of mental or emotional disorders.
20. An ________________diagnoses and treats diseases and disorders of the eye and vision.

Five additional tools or medical skills are included in this puzzle. Can you find them?

21. ______________________________
22. ______________________________
23. ______________________________
24. ______________________________
25. ______________________________

26. Identify one medical specialist who was omitted from this puzzle.

27. Identify one body system which was not represented in this puzzle.

Select one specialist, investigate the training, salary, opportunities, etc. Identify four advantages to this medical career. Identify four disadvantages to this medical career.

ADVANTAGES	DISADVANTAGES

TEMPERATURE

The temperature is one of an individual's vital or life signs.

A basic way to determine the presence and seriousness of an illness is to take a person's temperature, using one of three types of fever thermometers. These are: the oral thermometer (the most commonly used); rectal thermometer; and the multi-use or stub type, which can be used orally, rectally or under the arm. The oral thermometer is the easiest to use.

Purchasing a Thermometer:

1. Ask the advice of your physician, nurse, or pharmacist as to brand and type.
2. Purchase the best thermometer, not the least expensive (prices range from less than $1.00 for the cheapest thermometer to about $4.00 for the most expensive ones). A good thermometer is accurate, will last a lifetime unless it is broken, and is well worth the additional cost.
3. Do not purchase a thermometer that comes with a chart showing corrections. A good thermometer does not have to be corrected.
4. Examine the thermometer carefully before buying. Make sure that it is easy to read the numbers and lines on the glass and that the glass and that the mercury column is clearly visible and unbroken.
5. Read the guarantee carefully.

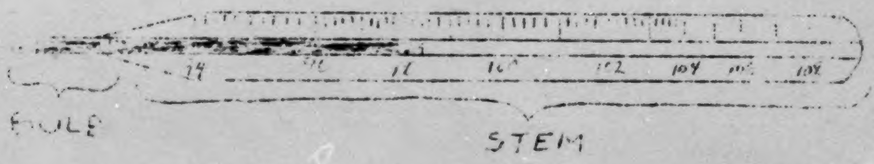
Taking the Temperature:

1. Before using a thermometer, disinfect it in rubbing alcohol or wash it thoroughly in soap and cool water. (Hot water may break it.)
2. Reduce the mercury level to a point well below 98.6°F. by holding the thermometer at the end opposite the bulb and shaking it downward sharply.
3. If an individual has been smoking or drinking hot or cold fluids, wait fifteen minutes before taking the temperature.
4. Place the bulb end in the mouth beneath the tongue and close the lips. Leave in place with the lips closed for three minutes.
5. Remove the thermometer, holding it by the stem. Wipe with cotton from the stem end toward the bulb end.

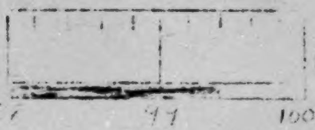
Reading the Thermometer:

1. Stand with your back to the light and hold the thermometer on the stem end at eye level.
2. Rotate the thermometer until you can see clearly the point at which the mercury column ends on the temperature scale.

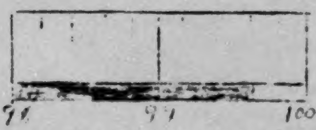
3. Each long line indicates a one degree elevation in temperature. Only every other degree is marked with a number. In between each long line are four shorter lines. Each short line equals two-tenths (2/10 or .2) of one degree. The thermometer is 'read' at the point at which the mercury ends.



On the following two diagrams, try to read the thermometer and record it.



reading ——



reading ——

4. Now take your own temperature (following directions given before). After reading the thermometer, wash it with soap and water. Then place it in the test tube filled with alcohol. Mark the exact time that you placed it in alcohol and place in front of the test tube.

*NOTE: A thermometer must be in alcohol twenty minutes before being used again.

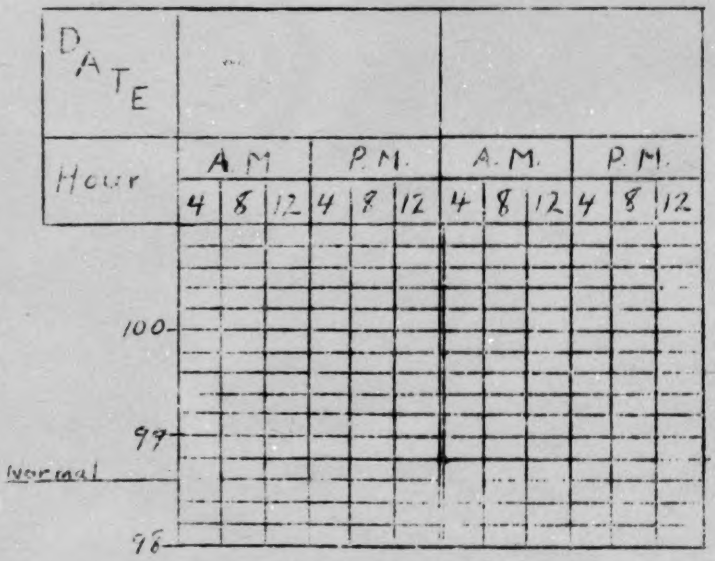
Charting the Temperature:

1. Doctor's offices and hospitals keep graphic charts for recording temperatures. It is important that these records be accurate and readable so they can be used effectively by doctors, nurses, or other health care workers.

2. To chart accurately, draw a solid dot on the lines which correspond to the readings and to the closest time the reading was taken.

On the diagram below, chart these temperatures for yesterday and today:

Yesterday: 8 a.m. - 98.8; 8 p.m. - 99.8
Today: 8 a.m. - 99.0; 8 p.m. - 99.6



Now connect the dots with straight lines. The graph will then show an accurate picture of temperature changes.

On the large Graphic Chart record your temperature, taken during class, on four consecutive days.

PULSE

The pulse is one of an individual's vital or life signs.

The pulse is the pressure of the blood felt against the wall of arteries as the heart alternately contracts and relaxes. This pulse can be felt anywhere in the body where there is an artery close to the surface, and where it can be squeezed against a bone by the fingers.

The Pulse as an Indicator

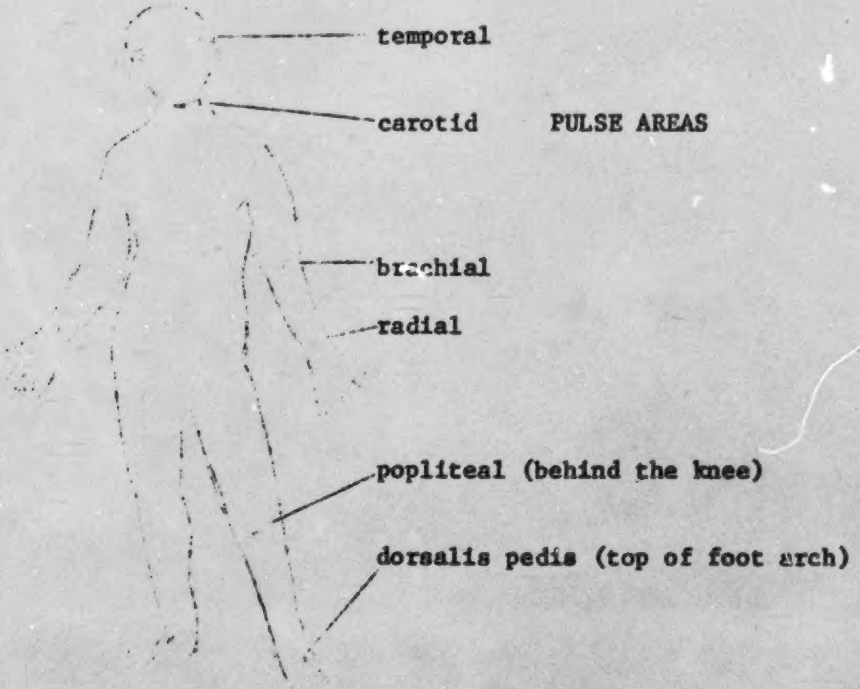
The average pulse rate is 72 beats per minute. Pulses that are too fast or too slow, too strong or too weak can give doctors an indication of the condition of the circulatory system. Pulse rates vary from person to person and change according to the activity level---- very slow during sleep and very rapid during strenuous exercise.

Taking the Pulse

1. Using the fingers, the pulse can easily be found at the sides of the neck, at the temples and on the thumb side of the wrist. (Other pulse areas can be seen in the diagram below)

2. Generally the pulse is taken over the radial artery.

3. The pulse rate is found by counting the number of throbs felt per minute. A shorter way would be to count for thirty seconds and then to multiply by two.



temporal
carotid
brachial
radial
popliteal (behind the knee)
dorsalis pedis (top of foot arch)

PULSE AREAS

4. Take your pulse for one minute and record it in the space to the right.

____

5. Wait a full minute. Take your pulse for one minute and record it again. ____________________

6. If #4 and #5 are not the same continue the procedure until you get two similiar counts.

Charting the Pulse

1. Persons who work in medical services generally keep graphic charts for recording pulses. It is important that these records be accurate and readable so they can be used effectively by doctors, nurses, or other health care workers.

2. Chart your pulse on the graph below. Remember to chart accurately, draw a solid dot on the lines which correspond to the readings and to the closest time the reading was taken.

RESPIRATION

Respiration is one of an individual's vital or life signs.

The main function of respiration is to supply the cells of the body with oxygen and to rid the body of carbon dioxide.

There are two parts to each respiration -- inhalation (taking in) and exhalation (giving off).

The Respiration as an Indicator

The average adult respiration rate is between fourteen and eighteen counts per minute. Health care workers are interested in both the character of respirations as well as the rate. Respirations are described as being normal, shallow, deep, labored or difficult. The type of activity or degree of illness of a person will in part determine the character of his respiration.

Counting the Respiration

1. The respiration rate is determined by counting the rise and fall of the chest for a one minute period.

2. If the rate you count is more than twenty-five per minute, it is said to be accelerated.

3. Count your respirations for one minute and record it in the space provided. ________________________

4. Wait a full minute. Count your respiration again for one minute. Record______________________.

5. If #3 and #4 are not the same continue the procedure until you get two similiar counts.

Charting the Respiration

1. Persons who work in medical services generally keep graphic charts for respiration recording. It is important that these records be accurate and readable so they can be used effectively by doctors, nurses, or other health care workers.

2. Chart your respiration on the graph on the next page. Remember to chart accurately, draw a solid dot on the lines which correspond to the readings and to the closest time the reading was taken.

NOTE: Since people can voluntarily control a portion of their respiration, most health care workers usually count both the pulse and respiration at the same time. This way the patient is unaware that their respiration is being counted.

ACTIVITY CHANGES/Circulation and Respiration

Earlier you learned to accurately take your pulse and respiration rates. Also you learned to record them on a graphic chart.

This experiment is designed to illustrate the changes which take place in the circulatory and respiratory systems as a result of activity.

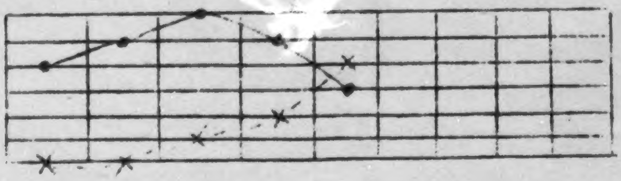
Examine the Chart

1. Look over the chart on the next page. You will notice that both pulse and respiration are to be recorded on one chart.

2. For this experiment only you will need to record your pulse rates with a solid dot ( ) and connect your solid dots with a solid line( ).

3. For this experiment only you will need to record your respiration rates with an x (x) and connect your x's with dotted lines (- - -).

4. See the example below:



Experiment Procedures

1. Select a partner who will assist you in this experiment (step 3&4)

2. Step 1: Sit quietly for five minutes.
Count your own resting pulse for twenty seconds.
Multiply your pulse rate by three and record on the graphic chart.

   Next count your respiration rate for twenty seconds.
Multiply your respiration rate by three and record on the graphic chart.
3. Step 2: Stand and take your pulse for twenty seconds.
Multiple your pulse rate by three and record on the graphic chart.

   Next count your respiration rate for twenty seconds.
Multiply your respiration rate by three and record on the graphic chart.

4. Step 3: Jog up and down the stairs once.
Count your own pulse for twenty seconds.
Multiply your pulse rate by three and record on the graphic chart.

   While you are counting your pulse your partner will count your respiratinns for twenty seconds.
Multiply your respiration rate by three and record on the graphic chart.

5. Step 4: Jog up and down the stairs three times without rest.
Follow the same procedure as step 3 above.

6. Switch partners and repeat entire experiment.

Need glasses? Know where to go for them? You really have two choices, depending upon what you think the problem might be or upon how you feel about medical doctors. In the end the person who will test your vision will be either an opthalmologist or an optemetrist.

An ophthalmologist is a medical doctor who specializes in the treatment of eye diseases and visual disorders. He or she is the person who may perform surgery on the eye itself.

Sometimes ophthalmologists are so busy treating diseases and disorders of the eye they do not have time to give vision tests. In this case, you may choose to see an Optometrist --- specialist who measures the power and range of your vision.

In either case, your glasses are made by the optician who grinds the lens according to your prescription and fits them to the frame you choose.

Define the following:

1. Ophthalmology
2. Ophthalmologist
3. Optometry
4. Optometrist
5. Optician

6. (a) Who do you think has the most education of the three professionals described above?

   (b) Who the least education?

7. Who would perform surgery on the eye?

Did you know the chances are very great that you will lose your hearing? Frightening? Not really, for we all will get old and slow down, and as we do so, our hearing powers will begin to fade.

If and when this happens, one, two or three professionals may be involved in the diagnosis. These people are the Otologist, the Otolaryngologist, and the Audiologist.

The Otologist is a medical doctor who specializes in diagnosis and treatment of the ear alone. The Otolaryngologist is a medical doctor who specializes in the diagnoses and treatment of the nose and throat as well as the ear. The Audiologist is a specialist in the non-medical evaluation and rehabilitation of persons with hearing disorders. All three may give hearing tests using an audiometer to determine the extent of hearing loss and may recommend the use of a hearing aid.

Many times, any one or all of these professionals work with another. The speech thereopist is one who helps persons correct speech defects which may or may not be connected with hearing problems.

1. Of the three professionals described above, who may perform surgery on the ear?
2. Who of the three may have the most training?
3. What is the difference between an Otologist and an Otolaryngologist?
4. Define Otology.
5. What is an Audiomaster?

MEDICAL I.Q.
Could You Survive in a Hospital?

VOCABULARY FOR NURSE'S AIDES

1. BANDACE:
   a. stoppage of blood
   b. to apply a length of material to a part of the body for support or protection.
   c. salve applied to wound
2. BASIN:
   a. a bowl, usually sterile (germ-free), to hold solutions
   b. Large bone found in lower leg
   c. special sterilizing process
3. PULSE:
   a. regular wave-like activity felt at various points on the body occuring with each heartbeat
   b. type of body fluid
   c. special instrument for measuring respiration
4. BLOOD PRESSURE CUFF:
   a. special hospital identification bracelet
   b. clotting of blood in lower leg
   c. inflatable cloth material wrapped around the arm to obtain a blood pressure reading.
5. SPLINT:
   a. type of break usually found in lower leg
   b. tissue connection between muscle and bone
   c. a support made of wood, metal, or plaster to keep a movable part from moving.
6. DISPOSIBLE SUPPLIES:
   a. salt, sugar, flour
   b. paper cups, kleenex
   c. sheets and pillowcases

VOCABULARY FOR LABORATORY TECHNICIANS

7. BACTERIA:
   a. X-raying process
   b. microscopic plant cells capable of causing disease
   c. spinal tap done in lower back.
8. CULTURE:
   a. good relationship between patient and doctor
   b. special medicine for curing colds
   c. to grow bacteria in a special dish so that they can be easily identified
9. BIOPSY:
   a. examining dead body tissue
   b. a test in which a small sample of living tissue is taken for miscroscopic study
   c. high-powered microscope
10. ANTISEPTIC:
   a. slows blood cell division
   b. counteracts high blood pressure
   c. stops bacterial growth

MEDICAL I. Q. - continued

11. TOXIC:
    a. poisonous
    b. type of medicine
    c. shot for lockjaw

12. CENTRIFUGE:
    a. machine used to prepare laboratory samples
    b. machine used to measure center of gravity
    c. central portion of the hospital

VOCABULARY FOR NURSES

13. IN-PATIENT:
    a. a person who is admitted to the hospital
    b. patient receiving heavy medication
    c. patient in private room

14. OUT-PATIENT:
    a. patient in a room with others
    b. a person who is treated but not admitted to the hospital
    c. patient receiving light medication

15. REGISTERED NURSE:
    a. nurse with two years of training
    b. a graduate nurse who has passed state exams and is licensed to practice
    c. nurse who admits patients

16. AMBULATE:
    a. loss of a limb
    b. attendant who operates an ambulance
    c. to walk about

17. AUSCULATION:
    a. rotating the hand in a circular fashion
    b. rapid breathing
    c. act of listening with a stethoscope

18. AFEBRILE:
    a. term used to describe high blood pressure
    b. without fever
    c. to cease breathing

VOCABULARY FOR DOCTORS

19. SCALPEL
    a. upper part of head
    b. brain tumor
    c. the blade used to make an incision

20. FRACTURE:
    a. material used in constructing a cast
    b. a break in a bone
    c. a broken artery

21. ELECTROCARDIOGRAM:
    a. electric shock treatment used on mentally ill
    b. death by electrocution
    c. (EKG, EGG) a graphic tracing of the electrical forces produced by the contraction of the heart.

MEDICAL I.Q. - continued

22. ALLERGY:
    a. medicine used in treatment of leukemia
    b. condition of being hypersensitive after exposure to a substance
    c. rare insect that transmits disease

23. ANALGESIC:
    a. a medicine for allergies
    b. person with a spasmodic disease
    c. a medicine that relieves pain

24. ANTIBIOTIC:
    a. a medicine used to kill or stop growth of bacteria
    b. to counteract brain damage
    c. loss of anethesia

MEDICAL TERMINOLOGY

Medical terms which are commonly used by health care workers are oftentimes difficult to understand. Knowing the meaning of terms which are frequently used will: (1) enable you to communicate more clearly with your doctor and (2) enable you to have greater understanding when you read magazine and newspaper articles concerning health.

Medical terms are usually combinations of words or word parts. Listed below are some more commonly used parts.

Prefixes	Suffixes	Common	Combining
anti (against)	algia (pain)	arthr	(joint)
bio (life)	cide (kill)	cardi	(heart)
contra (against)	ectomy (cut, remove)	crani	(skull)
endo (within)	emia (blood)	derm	(skin)
ex (out from)	gram (writing)	electro	(electric)
hemo (blood)	itis (imflammation)	gastr	(stomach)
hyper (excessive)	logist (person who practices a science)	gyn	(woman)
hypo (under)	logy (study of)	neur	(nerve)
hyster (uterus)	oma (swelling)	osteo	(bone)
micro (small)	osis (condition)	oto	(ear)
peri (around)	rhea (discharge)	path	(disease)
post (after)	therapy (treatment)	pod	(foot)
pre (before)		poly	(many)
re (again		psych	(mind)
		pulmo	(lung)
		thermo	(heat)
		vaso	(vessels)

A. Define the meaning of the following combined medical terms (use the prefix suffix and common combining lists above for help).

1. arthritis ____
2. biology ____
3. cardialgia ____
4. cardiologist ____
5. cardiovasular ____
6. craniotomy ____
7. dermatology ____
8. endoderm ____
9. gynecology ____

10. hysterectomy ______________________________
11. neuralgia ______________________________
12. neurologist ______________________________
13. osteoarthritis ______________________________
14. otitis ______________________________
15. pathology ______________________________
16. podiatrist ______________________________
17. psychiatry ______________________________
18. psychology ______________________________
19. tonsillectomy ______________________________
20. electrocardiogram ______________________________

B. With only partial information from the prefix and suffix and common combining lists see if you can define, in your own words, the following medical terms (try to do without a dictionary).

1. anemia ______________________________
2. appendectomy ______________________________
3. biopsy ______________________________
4. bronchitis ______________________________
5. carcinoma ______________________________
6. hemotoric ______________________________
7. hypertension ______________________________
8. pesticide ______________________________
9. postmortem ______________________________
10. prenatal ______________________________

WHAT ARE HEALTH CAREERS ALL ABOUT?

How would you define the word job?

How would you define the word career?

What do you think are the differences between the words job and career?

Would you prefer a job or a career? Why?

There are three stages to career education. What are those stages?

1.

1.

3.

There are many kinds of health careers. Some careers in health are common to other career groups. For example, there are administrators and teachers in schools

Where might an administrator in the health field work?

1.

2.

2.

Where might a teacher in the health field work?

1.

2.

3.

Every job requires people to function in relation to data, people and/or things in varying degrees. Have you ever heard people say, "Do you want to work with people or with things?" --- this is really what they are talking about.

What do you think the following mean:

Data:

People;

Things:

Do you think an Ambulance Driver is more related to data? people? or things? Explain your answer.

Do you think a Physical Therapist is more related to data? people? or things? Explain your answer.

Do you think a Pharmacist is more related to data? people? or things? Explain your answer.

Some terms such as therapy are common to the field of health. What does the word therapy mean? (Use the dictionary).

Some types of therapy are more difficult to define. You will need to know what the first word of their career means.

What do you think inhalation therapy would be?

What do you think occupational therapy would be?

Another term common to the field of health is nurse. What does the word nurse mean, in realtion to health care? (Use the dictionary).

What is a registered nurse?

What is an LPN nurse?

What is a nurse aide?

A medical doctor who works in one particular field is called a specialist.

The more a physician concentrates his attention on a given system of the body, the less time he has for the whole person and the less proficient he is in general practice. To thoroughly know one area of medicine, he must confine himself to it to the exclusion of other areas. Such concentration has been necessary for medicine to make its great strides in heart surgery, cancer treatment and prevention, psychiatry, orthopedics, surgery and other areas. A recognized specialist must have completed a full program of medical training and passed the written examination required of his particular specialty.

Some common specialits are:

Pediatrics -- doctors who specialize in the care of infants and children. They advise parents, give checkups diagnose congenital deformities, administer immunizations, and treat childhood diseases.

Surgery -- The work of the surgeon involves surgically operating on a patient to correct some physical condition. It may involve removing a cancer, repairing a defective heart, setting a broken bone, or attempting to correct a damaged brain.

Obstetrics -- doctors who specialize in obstetrics care for women in pregnancy and child birth. Frequently this speciality is combined with gynecology (the care of women's diseases).

What would the following specialists do:

A urologist specializing in urology.

A radiologist, specializing in radiology.

A proctologist specializing in proctology.

It has been said that behind every specialist there are at least ten to fifteen various health care workers. List below ten health care workers who might be of assistance to the fields of specialized medicine.

1.
2.
3.
4.
5.
6.
7.

MATCH YOUR ABILITIES TO CAREERS IN HEALTH

What are you abilities?

What are your interests?

What are your likes and dislikes?

Have you ever stopped to list the many things you can do well, or those activities that you like? Have you ever thought about the things that interest you? What are your likes and dislikes?

There are many things you like to do. For example, there are schoolmates you prefer to be with that you like, and probably others that you dislkie. You have favorite T.V. programs, and favorite movies. Certainly, you have favorite sports and recreational activities. There are certain books that you like to read, others you don't. There are some chores you don't mind doing around the house, and others that you detest.

Why do you like some things and not others?

Why do you have certain abilities that you consider your strong points?

Why are you interested in certain activities and not in others?

The answers to these questions will help you to choose a future career. It is important to begin knowing yourself, for in knowing yourself, you can channel your abilities, interests and likes into career choices. A choice that allows you to make the best use of your strengths and interests will be a wise choice of career. Such a choice will provide you with inner satisfactions because you will be doing things that interest you, or in which you are good!

The following questions are designed to give you some insight into yourself.

After each question, you will find four (4) choices of possible health careers. These fit the interest or ability found in the question. Select the best choice for each question and write it in the center column provided.

In the column at the right, next to each statement, headed, "My Interest or Ability," place a check (x) if that question suits your own interest, like or ability. (*Note: There may be more than one correct answer to a question.)

BEST CHOICE (write out) **MY INTEREST OR ABILITY** (check)

1. I write well and get good marks on my class compositions. I enjoy writing letters to friends.

PUBLIC HEALTH INFORMATION SPECIALIST
CYTOTECHNOLOGIST (study of cells)
SCIENCE WRITER
SANITARY ENGINEER

2. I am a pretty fair athlete and perhaps I may be on the school's varsity team. I enjoy coaching grade school children in sports and athletics.

SCHOOL HEALTH EDUCATOR
RECREATIONAL THERAPIST
DIETITIAN
PHYSICAL THERAPIST

3. I can draw and sketch well. Some of my drawings in the Science Class, or art class have been praised

STATISTICAL CLERK
WARD CLERK
MEDICAL ILLUSTRATOR
OCCUPATIONAL THERAPIST

4. I like to read about science subjects and the accomplishments of scientists. I like handling scientific equipment and trying out experiments on my own.

MEDICAL LIBRARIAN
REGISTERED NURSE
BIOLOGICAL RESEARCH TECHNICIAN
AMBULANCE ATTENDANT

5. I like to create things in the school shop. I enjoy industrial arts projects and help out with repairs at home.

ORTHOPEDIC APPLIANCE MAKER
HOSPITAL BUILDING MAINTENANCE WORKER
MEDICAL ASSISTANT
INHALATION THEREAPY AIDE

	BEST CHOICE (write out)	MY INTEREST OR ABILIT (check)
6. I keep the class materials well organized and neat. I am good at figures.	____________	____________

BLOOD BANK TECHNOLOGIST
MEDICAID AND MEDICARE CLERK
WARD CLERK
LICENSED PRACTICAL NURSE

7. I have a great deal of patience and compassion for those not as fortunate as myself. I like helping such people.	____________	____________

REGISTERED NURSE
STATIONARY ENGINEER
STATISTICIAN
PSYCHIATRIC SOCIAL WORKER

8. I do my best work in quiet orderly surroundings such as in the library or certain places at home. I like handling details which involve looking up facts in books.	____________	____________

COMPUTER PROGRAMER
MEDICAL RECORDS LIBRARIAN
OUT-PATIENT ASSISTANT
CLERK IN BUSINESS OFFICE

9. I work best when I am under pressure. When I take examinations, I usually do very well.	____________	____________

AMBULANCE ATTENDANT
EMERGENCY ROOM ATTENDANT
INTENSIVE CARE UNIT
OPERATION ROOM ATTENDANT

10. I have good work habits, follow directions well and generally observe rules when they are set for the welfare of the majority of the school	____________	____________

JUNIOR ACCOUNTANT - BUSINESS OFFICE
ENVIRONMENTAL RESEARCH AIDE
HISTOLOGIC LABORATORY AIDE
HOSPITAL PERSONNEL DIRECTOR

BEST CHOICE (write out) MY INTEREST OR ABILIT (check)

11. I enjoy dramatics, dramatic art, radio and television classes. People say I am a natural actor. ____________ ____________

HOSPITAL PUBLIC RELATIONS OFFICER
MEDICAL RECEPTIONIST
ADMITTING OFFICER
MEDICAL SOCIAL WORKER

12. I like to write for my school newspaper or literary ediotr. ____________ ____________

MEDICAL SCIENCE WRITER
PUBLIC HEALTH INFORMATION SPECIALIST
HEALTH EDUCATOR
DRUG RETAIL SALESMAN

13. I'd like to make money right away and become independent. ____________ ____________

EXPLORING A HEALTH CAREER

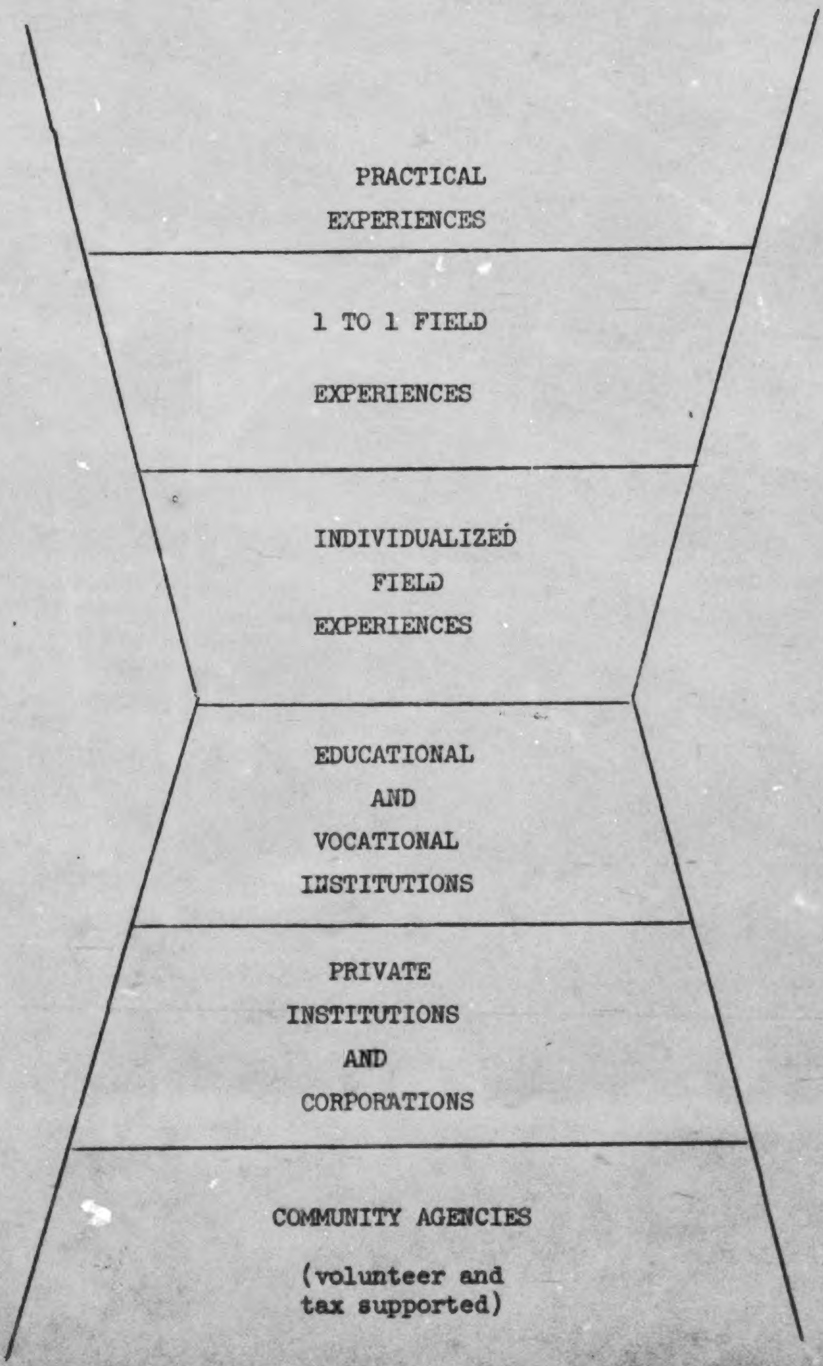
Select one health or health related career. It should be one which particularly interests you and one in which you would like to obtain more information.

Using any material that is available to you, develop an informational chart, pamphlet or flier which would, in brief form, intice someone to look further into the career. You may use illustrations, diagrams, slogans, etc. You should include the following information:

1. Name of the career
2. Brief job description
3. Type or amount of training necessary
4. Salary
5. Employment opportunities (open equally to both sexes?)
6. Personal qualifications
7. Any special information (working conditions, hours, etc.)
8. Advancement opportunities
9. Where to find further information.

NOTE: Exploration Exposures should be organized in a building block pattern moving from step 1 to step 6. This type of organization will allow students to move as far as their interests carry them.

EXPLORATION EXPOSURES



PRACTICAL EXPERIENCES
1 TO 1 FIELD EXPERIENCES
INDIVIDUALIZED FIELD EXPERIENCES
EDUCATIONAL AND VOCATIONAL INSTITUTIONS
PRIVATE INSTITUTIONS AND CORPORATIONS
COMMUNITY AGENCIES (volunteer and tax supported)

SAMPLE EXPLORATORY EXPERIENCES INTEREST AREAS:
(Portland Metropolitan Area)

General (Community Volunteer Agencies)

1. American Cancer Society
2. American Red Cross
3. Blanchet House
4. Central Fire/Disaster Center
5. Goodwill
6. Sunshine Division
7. United Good Neighbor

Biology and Zoology

1. Carolina Biological Laboratory (POwell Division)
2. United Medical Laboratory

Community, Social and Youth Work

1. Contact Center/Arbuckle Flat
2. Drug Treatment Center
3. FISH
4. Food Stamp Distribution Center
5. North Portland Youth Service Center
6. Outside-In

Cooking/Foods

1. Benson Hotel
2. Kaiser Hospital/Diet Kitchen
3. Natures Storehouse
4. Oak Knoll Winery

Dental Technology

1. Dahlin Dental Laboratory
2. Portland Community College-Sylvan Campus/Dental Department
3. Western Dental

Ecology/Conservation

1. Crown Zellerbach
2. Department of Environmental Quality
3. Forestry Center
4. Harborton
5. Trojan Nuclear Plant
6. Wildlife Management

Medicine and Medical Technology

1. Barnes Veteran's Administration Hostital
2. Emmanuel Hospital
3. Medical Laboratory/Medical-Dental Building

Nursing

1. Del's Care Center
2. Kaiser Hospital
3. Multnomah County/Multi-Service Center
4. Portland Community College-Sylvan Campus/Nursing Department
5. University of Portland-Nursing Department

Pharmacy

1. Kaiser Hospital/Pharmacy Department
2. Northwest Physical Therapy Clinic
3. University of Oregon Medical School/Physical Therapy Ward

Special Education

1. Emily School
2. Oregon School for the Blind/Salem
3. Clarendon Elementary School

Veterinary Medicine

1. C.J.'s Dog Grooming Salon
2. King Size Stables
3. Lombard Animal Hospital

Miscellaneous

1. American Ambulance
2. Multnomah County Medical Services

ACCESSION NUMBER: VT102838

TITLE: VOCATIONAL EDUCATION CURRICULUMS.

DESCRIPTOR: *COURSE DESCRIPTIONS; *VOCATIONAL EDUCATION; CUSTODIAN TRAINING; OFFICE OCCUPATIONS EDUCATION; FOOD SERVICE OCCUPATIONS; GRAPHIC ARTS; SALES WORKERS; SEAMSTRESSES

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 76P.; RELATED DOCUMENT VT 102 934 IN THIS ISSUE.

ABSTRACT: THIS GUIDE CONSISTS OF COURSE OUTLINES FOR SEVERAL VOCATIONAL EDUCATION PROGRAMS DEVELOPED BY THE CHICAGO GOODWILL REHABILITATION CENTER. THESE INCLUDE: CUSTODIAL SERVICES, CLERICAL OCCUPATIONS, ELECTRICAL-MECHANICAL ASSEMBLY, FOOD SERVICES, GRAPHIC ARTS, SALES MERCHANDISING, SPRAY PAINTER, CLOTHING INDUSTRY OCCUPATIONS, TRUCK DRIVER AND HELPER, AND UPHOLSTERY OCCUPATIONS. THE INDIVIDUAL CURRICULUMS ARE PRESENTED IN OUTLINE FORMAT, SUBDIVIDED INTO GENERAL AREAS OF LEARNING. THE RECOMMENDED NUMBER OF HOURS FOR EACH OF THE GENERAL LEARNING TASKS IS GIVEN, ALONG WITH A RECOMMENDED TOTAL TIME FOR THE COURSE. MINIMUM ENTRANCE REQUIREMENTS ARE SPECIFIED AND A GENERAL INDICATION OF PLACEMENT POSSIBILITIES UPON COMPLETION OF THE PROGRAM IS OFFERED. THE "DICTIONARY OF OCCUPATIONAL TITLES" NUMBER IS GIVEN FOR EACH OF THE PROGRAMS. (NJ)

Custodial

BUILDING SERVICES

D.O.T.
381.887

I. Orientation

5 Hours

Introduction
General Safety Procedures
Quality of Good Job Performance
Working Conditions
Salary Schedules
Prospects for Future Employment

II. Equipment

15 Hours

Purpose and Use of Equipment
Special Safety Procedures for Each Item
Care of Equipment
Particular Attention Given the Following:
- Automatic Floor Scrubbers
- Buffing Machine
- Carpet Cleaner
- Geerpres Desk Lift
- Ladders

III. Tools and Supplies

15 Hours

Familiarization with the many types of brooms, mops, and buckets. Learning the qualities and uses of various kinds of soaps, detergents, disinfectants, waxes, and sealers.

Proper care and storage of tools and supplies.

IV. Floors

15 Hours

Instruction in the different types of flooring and carpeting and special care of each.

Specail attention given to:
Asphalt Tile
Wood (oak, maple, parqueted, and fir)
Marble
Vinyle Tile
Terrazzo
Concrete
Carpets (wool, synthetics, and Ozite)

V. Furnighings

25 Hours

Care of different finishes of office furnishings such as:
- Wood (mahogany, walnut, and maple)
- Formica
- Metal (chrome and painted)
- Glass Tops
- Vinyl
- Upholstery Fabrics

Proper methods of moving office furnishings by use of dollies, hand trucks, Geerpres desk lift and by hand.

Also how to set up cafeterias and auditoriums

VI. Large Area Cleaning

120 Hours

Instruction and skill training in the cleaning procedures performed in public buildings
- Sweeping
- Stripping Floors
- Waxing Floors
- Mopping
- Washing Floors

VII. Office Cleaning

Instruction in the proper cleaning procedures for offices.
- Carpet cleaning and vacuuming
- Mopping
- Dusting
- Glass Cleaning
- Waste Paper Removal

VIII. Washroom Cleaning

60 Hours

Training in the proper procedures for cleaning washrooms
- Cleaning and sanitizing toilets
- Washbowls
- Mirrors
- Chrome Fixtures
- Tile Walls
- Replacement of towels and tissue
- Refilling Soap Dispensers

IX. Safety

26 Hours

To learn fire prevention regulations such as:
- Location and operation of fire extinguishers
- Storage of combustible materials
- Fire exits
- Location and operation of utility shut-off valves
- Electrical overloading
- How to report and detect unsafe conditions

X. Minor Repairs 30 Hours

Replacing Faucets, Washers, Gaskets, etc.
Repairing Water Boxes and Toilets
Cleaning and Unstopping Drains
Bleeding of Hot Water and Steam Radiators
Replacement of light bnulbs and flourescent tubes
Location and replacement of fuses

XI. Minimum Entrance Requirements

General Educational Background -
Should be able to follow verbal and written instructions

Aptitude -
Intelligence - Should have dull normal to average intelligence.
Memory - Must be able to retain instructions regarding work performed both daily and on a periodic basis.
perception - Should have at least average perceptual ability.

Physical Demands -
Must possess mobility, stamina and be able to lift 100 lbs. Duties require a great deal of standing, walking, stooping, and vigorous arm movements. Must be able to tolerate skin contack with strong detergents.

XII. Placement

Upon satisfactory completion of this course, the student will be placeable as a sanitary engineer for contact cleaner, apartment janitor, or office and Building Service employee.

Recommended length of Course .... 14 Weeks

CLERICAL

Clerk Typist

Dictaphone Secretary

Medical Receptionist

Secretary

Bookkeeper

CLERK TYPIST

- C. Wrenches
    - 1. Open End
    - 2. Box
    - 3. Allen
- D. Proper Selection of Tool

IV. Component Identification

- A. Resistors
- B. Capacitors
- C. Diode
- D. Transistors

V. Component Installation

- A. Terminals
    - 1. Basic Procedure
    - 2. Heavier Lead Component
    - 3. Component with Sleeving
    - 4. Polarized Component
    - 5. Clip-Mounted Component
    - 6. Printed Circuit Board
- B. Color Coding

VI. Wire

- A. General Sizing
- B. Basic Preparation
  - 1. Stripping
  - 2. Tinning
  - 3. Solderless Terminals
  - 4. Wicking
- C. Wire Wrap Termination
  - 1. Tools
  - 2. Procedure
  - 3. Common Problems

VII. Basic Soldering

- A. Introduction
  - 1. History
  - 2. Definition
- B. Solder
  - 1. Fusion
  - 2. Wetting
  - 3. Application
- C. Soldering Iron
  - 1. Tip
  - 2. Tinning Tip
  - 3. Inspection of Tip
  - 4. Care of Tip

VIII. Build Pakit Assembly

- 1. Kit
- 2. Instruction Book

IX. Minimum Entrance Requirements

General Education Development -
Should be able to follow instructions in oral, written and diagramnatic form.

Aptitude -
Intelligence - Should have dull normal to average intelligence.
Memory - Must be able to retain instructions regarding work.
Dexterity & Coordination - Must have at least average ability in manual and finger dexterity in both hands.

Personality and Interests - Should show a strong interest for mechanical work.

Physical Demands - Must be able to be partially mobile; most of work is sedentary.

X. Placement

Upon satisfactory completion of this course, the student would be placeable as a Assembly Line Operator in a Electronic Plant.

ELECTRICAL MECHANICAL

MECHANICAL CURRICULUM

I. Orientation

- A. Introduction
- B. General Safety Procedures

- Qualities of Good Job Performance
- General Safety Procedures
- Employer-Employee Relations
- Working Conditions
- Relationship to Co-Workers
- Salary Schedules
- Prospects for Future Employment

II. Sanitation 10 Hours

- Instruction and practice in proper sanitation procedures
- Personal Hygiene
- Sanitary Food Handling
- Maintaining Cleanliness in Assigned areas

III. Equipment 90 Hours

- Purpose and Use of Equipment
- Special Safety Procedures for Each Item
- Care of Tools and Equipment

IV. Sandwich and Beverage Preparation 40 Hours

V. Soup Preparation 40 Hours

VI. Preparing Vegetables 160 Hours

- Washing Vegetables
- Peeling Vegetables
- Cooking Vegetables
- Seasoning Vegetables

VII. Salad Preparation 120 Hours

VIII. *Entrees* — *410 Hours*

Proper methods of cooking meat, fish, poultry, roasting, frying, broiling, baking.

IX. *Bread and Pastry* — *265 Hours*

Instructions in the preparation of the following:

Breads	Dinner Rolls
Sweet Rolls	Cakes
Icings	Pies
Cookies	Donuts

X. *Minimum Entrance Requirements*

General Educational Development -
Should have academic achievement equivalent to a tenth grade education. Must be able to do all arithmetic operations with whole numbers, fractions, and decimals.

Aptitudes -
Intelligence - Should be within the normal or bright normal range in intelligence, 90 to 119.

Personality and Interests -
Should have strong interests in food preparation

Physical Demands -
Must be able to stand, bend, stoop, and kneel; occasional heavy lifting is required.

XI. *Placement*

Upon satisfactory completion of this course, the student will be placeable as an assistant cook in a restaurant or cafeteria.

Recommended Length of Course . . . . 38 Weeks

KITCHEN HELPER

D.O.T.
318.887

    3. Practice good breath control (halitosis)

B. Sanitary food handling
    1. Keep work area clean
    2. Handling food with correct equipment

C. Cleanliness of work area
    1. Clean equipment
    2. Work tables & floor free from waste

III. Equipment — 20 Hours

A. Purpose and use of equipment
B. Special safety procedure
    1. Food chopper
    2. Knives
C. Care of equipment
    1. Knives
    2. Cutting boards

IV. Salads — 150 Hours

A. Classifications
    1. Chilled salads
    2. Frozen salads
    3. Hot salads
B. Method of serving
    1. Bowl
    2. Decorative
    3. Platter
    4. Individual
C. Salad ingredients
    1. Molded salads
        a. Fruit
        b. Gelation
        c. Greens

        2. Fruit salads
            a. Greens
            b. Grated nuts
    D. Selection of ingredients
        1. High quality
        2. Fresh
    E. Preparation of food for salads
        1. Served as soon as possible after preparing
        2. Greens torn or cut to bit-size
    F. Assembly of ingredients

V. Description of salads

100 Hours

    A. Bowl salad
        1. Vegetables & greens
            a. Clean & crisp
    B. Decorative salads
        1. Holiday salads
            a. Christmas
            b. Star
            c. Candle
    C. Frozen salads
        1. Cream cheese
        2. Cottage cheese
        3. Fruits with whipped cream
    D. Hot salads
        1. Potato
        2. Macaroni
    E. Individual & Dinner salads
        1. Fruits
        2. Vegetables

VI. Sandwiches

100 Hours

    A. Cold-cuts
        1. Salami
        2. Liver sausage
        3. Ham
        4. Cheese
    B. Spread sandwiches
        1. Chicken salad
        2. Tuna salad
        3. Sandwich spread
    C. Club sandwiches
        1. Ham & Cheese
        2. Bacon, lettuce & tomato
        3. Turkey, lettuce & tomato

VII. Garnishes

10 Hours

    A. Parsley
    B. Cherries
    C. Mint

VIII. Salad Dressings

40 Hours

    A. Mayonnaise
    B. Tartar sauce
    C. French
    D. Thousand Island
    E. Russian

IX. Preparation of simple desserts 35 Hours

A. Puddings
B. Jello
C. Cheese Cake
D. Cake
E. Pie

X. Placement

Upon successful completion of this course the student should be placeable as a Salad Girl in a Restaurant.

Recommended Length of Course............................16 Weeks

GRAPHIC ARTS

Multilith Operator

MULTILITH OPERATOR

D.O.T.
651.782

I. Orientation — 5 Hours

Introduction
General Safety Procedures
Quality of Good Job Performance
Working Conditions
Salary Schedules
Prospects for Future Employment

II. Tools and Equipment — 35 Hours

Purpose and Use of Tools and Equipment
Special Safety Procedures for Each Item
Care of Tools and Equipment
Particular attention Given the Following:
    Collating Machine
    Paper Cutter
    Padding Press
    1250 Multilith Machine
    1850/W Multilith Machine

III. Bindery — 35 Hours

Cutting Paper Stock
Collating
Padding
Binding

IV. 1250 Multilith Operation — 350 Hours

Principles Behind Offset Printing
Set-up
Making Lateral and Vertical Adjustments
Adjusting to Weight of Paper Stock
Balancing of Ink and Moisture
Changing Ink Colors
Printing Two Sides

V. Two-Color Printing — 135 Hours

Principles
Set-up
Registering

VI. Minimum Entrance Requirements

General Educational Development -
Should have an academic competency equivalent to an eighth grade education.

Aptitudes -
Intelligence - Should be in the normal to bright normal ranges, 90 to 119.

Perceptual Speed and Accuracy - Should possess at least average perceptual speed and accuracy.

Manual Dexterity - Should possess at least average manual dexterity with both hands.

Personality and Interests -
Should show a preference for artistic work requiring rigid standards of performance.

VII. Placement

Upon satisfactory completion of this course, the student will be placeable as a Multilith Operator in either a letter shop or the in-house printing department of a corporation or university.

Recommended Length of Course .... 16 Weeks

SALES MERCHANDISING

Cashier

Assistant Manager

Mail Messenger

XI. *Measuring, Cutting, and Fitting* 175 Hours

Instruction and practice and the correct techniques of measuring the article, sizing and cutting the material.

XII. *Tacking and Flatwork* 175 Hours

Learning the correct method of stretching and stapling or tacking fabric to frames of sofas and chairs. Development of speed and accuracy.

XIII. *Covering and Attaching Buttons* 175 Hours

XIV. *Upholstery Finishings* 30 Hours

Instruction and practice in the correct method of trimming and finishing the upholstered item.

XV. *Estimating* 95 Hours

Learn to accurately estimate the amount of materials to be used in the upholstery of a particular item, the amount of labor involved and the total cost.

XVI. Minimum Entrance Requirements

General Educational Development -
Should be able to follow instructions in oral, written or diagrammatic form.

Must be able to use calibrated measures and do arithmetic calculations.

Aptitudes -
Intelligence-Should be within the normal or bright normal range of intelligence, 90 to 119

Dexterity and Coordination -
Must have at least average ability in manual and finger dexterity for both hands.

Personality and Interest -
Should show a strong preference for work of an artistic nature.

Physical Demands -
Must be able to stand, bend, stoop and kneel. Occasional heavy lifting is required.

XVII. Placement

Upon satisfactory completion of this course, the student would be placeable as a custom upholsterer in a re-upholstery shop.

Recommended Length of Course . . . . 48 Weeks

Summary

Goals and Objectives

The time period covered by this report is from July 1, 1974 to June 30, 1975

The career education program in Anne Arundel County is designed to meet the needs of the students of Anne Arundel County in enabling them to:

1. develop an awareness of self and others
2. develop favorable attitudes about the personal, social, and economic significance of work
3. develop and practice appropriate career decision making skills
4. develop the skills necessary to obtain employment and/or to pursue further education
5. obtain employment and/or to pursue further education.

Procedures

The program in career education in Anne Arundel County which emerged as a result of task force effort is a sequential interdisciplinary program based upon skills, attitudes, behaviors, and experiences deemed necessary for career decision-making.

The elementary component of the Anne Arundel County Program focuses on career awareness and an understanding of self.

The junior high program is designed to begin narrowing the range of job exploration and to begin the process of identifying career preferences.

At the senior high level, the program continues to emphasize career concept areas and their application to classroom instruction.

The basic implementation strategy during this reporting period has been one of internalizing career education into the total school program. At the central office level this implies involvement of the program coordinators who are the content specialists in each area. They have been involved in infusing career education objectives into the county curriculum for each area.

At the school level, career education resource teachers have been assigned to the four area offices and function as a part of the area office rather than as career education "project people."

Results and Accomplishments

The infusion of career education objectives into science, language arts, social studies, math, and foreign languages has been completed.

Resource teachers have operated effectively in the area office under the direction of the area director and other staff personnel. The Coordinator of Career Education served in an advisory capacity to the area staffs during this school year.

Numerous in-service sessions have been held with teachers, counselors, and other staff personnel to demonstrate the feasibility of infusing career objectives into existing content. In addition, career technology and elementary language arts-typing programs have been expanded to support the classroom efforts and give students hands-on experiences in basic skills areas. Resource centers consisting of

6

support materials have been rapidly expanded to meet the needs of classroom teachers. At the junior high level mobile units have been used to give exploratory experiences to academically disadvantaged students.

The model for counselor-teacher interaction was implemented in Area III with very satisfactory results.

The model for placement and follow-up was implemented at Annapolis Senior High School with good results despite the economic fluctuations.

Evaluation

Third-party evaluation was conducted by Ibex, Inc., Durham, North Carolina.

BODY OF THE REPORT

I. Problem

In a rapidly changing technological society, characterized by automation, students have new educational needs. In Anne Arundel County the initial steps have been taken to meet some of those needs.

In December of 1969 Anne Arundel County Schools completed an exhaustive study of the public school system for the purpose of determining the direction education should take. Participating in the study were the administrative-supervisory and instructional staffs, the vocational advisory committees and the Citizen School Study Committee. In the forefront of the needs that emerged as a result of this study were three that define the problem area toward which this project is directed:

a. Need to provide all or at least the great majority of students with occupational skills for job entry, in addition to preparation for continuing education.

b. Need to integrate the world of schooling and the world of work into a relevant goal-oriented program.

c. Need to provide a continuing program of exploration of individual abilities and interests so that students may make occupational decisions on the basis of self-knowledge, educational experiences and career information.

In response to these identified needs, Dr. Edward J. Anderson, Superintendent of Schools, recommended to the Board of Education that a task force be formed to develop K through 12 curriculum for career development education. In September 1970 this task force of county teachers and guidance counselors, representing a variety of disciplines and levels, was assembled. The educators were granted a year's leave of absence from their regular positions for the purpose of developing a relevant program in career education. At the same time, working in close liaison with the task force, the department of vocational education set about expanding and upgrading their programs at secondary level.

Recognizing that schools have a responsibility to provide experiences that will prepare all students to move directly to jobs or to post-secondary-school occupational or academic programs, attention was also given to the needs of students with academic, socio-economic or physical handicaps. The goal was to permit such students to function in the main

9

stream of education insofar as is possible by individualizing instruction, and to provide placement services for students whether their leaving occurs prior to or following high school graduation.

To assess work opportunities available, the task force researched manpower needs through manpower reports at the national level and in conjunction with state and county manpower agencies at the local level.

II. Goals and Objectives of the Project

On January 30, 1973 a goals committee consisting of:

1 secondary principal
1 parent
1 secondary teacher
2 elementary teachers
1 student
1 assistant area director
1 coordinator of instruction

and the coordinator of career education was established to redefine the goals and objectives for career education in Anne Arundel County.

Since direction for the career eduation program was coming from many sources their task was one of consolidation into one document the goals and objectives which would adequately reflect the thinking of a variety of people. To this end the goals committee carefully analyzed:

1. Anne Arundel County General Education Goals

2. Maryland State Department of Education Goals and Objectives

3. The Career Education Objectives as stated for each conceptual area of career, self, society, economics and technology in The Career Development Curriculum Guides. These guides were developed during the 1970/71 school year.

4. The original goals and objectives of this project.

The following goals and objectives are a result of this effort. Since they reflect the input of a broad spectrum of thinking they will, upon receiving board approval, form the basis of the career education program in Anne Arundel County during the 1975/76 school year.

ANNE ARUNDEL COUNTY PUBLIC SCHOOLS

Mr. George Surgeon	Principal Brooklyn Park Elementary School
Mr. Robert Jervis	Coordinator, Career Education Central Office

ANNE ARUNDEL COUNTY PUBLIC SCHOOLS GOALS FOR CAREER EDUCATION

The Career Education Program is designed to meet the needs of the students of Anne Arundel County in enabling them to:

1. develop an awareness of self and others.

   A realistic career choice depends upon the individuals understanding of his interests and abilities. An understanding of self and others enables an individual to clarify his own values and responsibilities as a contributing member of society.

2. develop favorable attitudes about the personal, social and economic significance of work.

   The school should encourage in students the development of favorable attitudes toward employment. Students should understand that work gives personal satisfaction and fulfills social and economic needs of society.

3. develop and practice appropriate career decision making skills.

   Students should be taught to analyze situations and problems on the basis of pertinent information. They should be able to integrate knowledge of self and the world of work in order to make appropriate career decisions.

4. develop the skills necessary to obtain employment and/or to pursue further education.

Schools should provide programs which integrate academic, communication, and manual skills needed to help students achieve their career goals. The schools also have a major responsibility in guiding students toward realistic course selections based on career preference.

5. obtain employment and/or to pursue further education.

The schools have an obligation to assist in the placement of all exiting students in gainful employment and/or a post high school academic or technical educational setting at an entry level appropriate to their career objectives.

OBJECTIVES

The Career Education program will enable students:

1. to develop an awareness of self and others.

    111. After participating in various activities, the student completing level one will be able to tell about those things he enjoyed and those he did not.

    112. Given various attitudes and behaviors that people demonstrate, the student completing level one will be able to select attitudes and behaviors that he feels fit him and those that he feels do not.

    113. Having participated in a group task, the student completing level one will be able to identify the contributions made by each member of the group.

    121. After listing his own abilities and interests the student completing level two will select from a list of tasks those which are compatible with his interests and abilities.

    122. Given a specific task the student completing level two will describe how his attitudes and behaviors affected his performance.

    123. Given a specific work setting, the student completing level two will list both positive and negative aspects of that working environment.

124. From a list of work related values the student completing level two will identify those which are a part of his own value system and decide whether they would have a positive or negative effect on his performance in a specific task situation.

131. After analyzing his interests and abilities the student completing level three will be able to make tentative occupational selections.

132. From a list of attitudes and behaviors the student completing level three will identify those which he feels should lead him to success in any work situation.

133. The student completing level three will compare and contrast his present values with those inherent in his tentative occupational selections and predict his probability of success.

134. Given a specific work setting, the student completing level three will identify how the particular contributions of each person led to the successful completion of the task.

141. The student completing level four will evaluate his tentative occupational choice and demonstrate how his abilities and interests are appropriate for this choice.

142. Presented with various work attitudes and behaviors the student completing level four will identify those which he feels are compatible with his career plan.

143. The student completing level four will identify his potential contributions to society through his occupational choice.

144. Having analyzed his personal values, the student completing level four will decide if the values he feels strongly about will have a positive or negative affect toward success in his occupational choice.

II. to develop favorable attitudes about the personal, social and economic significance of work.

211. Given a list of workers in a community the student completing level one will explain how each contributes to society and how the attitudes and traditions of society affect his work.

212. Shown pictures and/or lists of jobs available in a given geographical area the student completing level one will be able to determine how geography affects occupations.

213. Given tools and materials the student completing level one will use them to complete a task.

214. Given a description of various family units the student completing level one will identify the contributions made by each member of the unit.

215. Having identified various workers, the student completing level one will be able to tell what they do.

216. Given a list of jobs familiar to him, the student completing level one will identify those that are related.

217. Presented with a specific task the student completing level one will be able to identify the skills necessary to complete the task.

221. Selecting several workers from a given society the student completing level two will show how they interact and how their work benefits that society.

222. Given a description of a society in change the student completing level two will identify the traditions, attitudes and needs and describe their affect on jobs.

223. Given a specific geographic setting the student completing level two will list the jobs available in the area and identify the factors which created the jobs.

224. Given a sample project the student completing level two will identify the technology used in its completion.

225. Given a list of discoveries and inventions the student completing level two will match them with changes that have resulted from them.

226. Given a simulated work situation the student completing level two will identify the worker roles and tell how these roles may directly affect the student and other members of society.

227. Given a description of a specific occupation the student completing level two will cite examples of knowledge and skills which may be applied to another occuaption.

228. Given a specific worker role the student completing level two will identify characteristics that should lead to success in that occupational area.

231. Given a specific job setting the student completing level three will cite examples of technological change and decide if they have had a positive or negative affect on life.

232. Given a specific geographic setting the student completing level three will list the jobs available in the area, identify the factors which created the jobs and the changing economic trends involved.

233. Given a list of jobs the student completing level three will match the benefits provided to society each job.

234. Given a list of jobs in broad occupational areas the student completing level three will identify traditions and attitudes of society that affect each job.

235. After analyzing and establishing his own list of occupational choices the student completing level three will rank his choices in order of priority.

236. After exploring the requirement of several occupational areas the student completing level three will identify those that relate to his future occupational choice.

237. Given a listing of school courses the student completing level three will select those that will provide the basic learnings necessary for his occupational choice.

241. Having made an occupational choice the student completing level four will list the economic incentives of that choice as they relate to his anticipated standard of living.

242. Given a list of needs, traditions and attitudes that have changed in his society, the student completing level four will identify how these changes will affect his occupational choice.

243. Given a situation in which the workers of an occupational area have withheld their services the student completing level four will evaluate the consequences of this action.

244. Based on knowledge of his occupational choice, the student completing level four will cite examples of possible technological changes in this area and discuss their implications.

245. The student completing level four will select from a list of programs those that will assist in converting his occupational choice to reality.

246. The student completing level four will be able to make the necessary adjustment for job entry and/or further education.

III. to develop and practice appropriate career decision making skills.

311. Given a situation the student completing level one will make a choice and give the reasons for that choice

321. Given a hypothetical situation the student completing level two will identify the basic steps in the process of decision making.

331. Given a hypothetical situation the student completing level three will make tentative career decisions utilizing the decision making process.

332. Having explored selected career areas the student completing level three will make tentative occupational decisions based on knowledge, interests, abilities and values.

341. Having made a tentative career decision the student completing level four will plan an educational and/or training program that will assist him in converting vocational preference into reality.

IV. to develop the skills necessary to obtain employment and/or to pursue further education.

431. Given a variety of occupational settings the student

20

completing level three will be able to relate academic training and skills to job performance.

432. Having made a tentative occupational choice the student completing level three will identify and select the school subjects which contain the specific knowledge required for his career choice.

441. Having made a tentative occupational choice the student completing level four will obtain employment and/or to pursue further education.

21

ANNE ARUNDEL COUNTY PUBLIC SCHOOL GOALS FOR CAREER EDUCATION

The Career Education Program is designed to meet the needs of the students of Anne Arundel County in enabling them to:

1. develop an awareness of self and others.

   (C-5, C-6, C-7, C-8, C-9, C-11, C-12, A-1, A-2, A-3, A-5, A-6, D-1, D-4, D-7)

2. develop favorable attitudes about the personal, social, and economic significance of work.

   (C-5, C-6, C-10, C-13, C-14, A-1, A-2, A-6, D-5)

3. develop and practice appropriate career decision making skills.

   (C-2, C-5, C-13, C-14, D-1, D-2, D-3, D-4, D-6, D-7, P-4)

4. develop the skills necessary to obtain employment and/or to pursue further education.

   (C-1, C-3, C-4, C-7, C-13, C-14, A-4, D-4, D-6, P-1, P-2, P-3, P-4)

5. obtain employment and/or to pursue further education.

   (P-2, P-3, P-4, C-13, C-14)

Information in parentheses relates the Anne Arundel County Goal for Career Education to appropriate Anne Arundel County Instructional Goals and Maryland State Department of Education Goals for Career Education.

C - Indicates an instructional goal identified by the Anne Arundel County Public Schools.

A - Indicates an awareness stage goal for career education identified by the Maryland State Department of Education.

D - Indicates a decision-making stage goal for career education identified by the Maryland State Department of Education.

P - Indicates a preparation stage goals for career education identified by the Maryland State Department of Education.

ANNE ARUNDEL COUNTY INSTRUCTIONAL GOALS

The statements below are an integral part of our report. We recommend that the Board submit them to the Instructional Division for use as guidelines developing objectives and programs related to these goals.

These statements are related to specific goals and are designed to clarify and expand on the meaning of the goals. Where the goals are self-explanatory, statements have not been included.

Goal 1

The school system should provide whatever varied programs are needed for the intellectual and academic development of all students, regardless of their abilities, handicaps, backgrounds, etc.

Goal 2

Our schools should recognize that sound decision making often includes both subjective and objective elements. That is, students should be taught to analyze situations and problems on the basis of the facts presented and to recognize that emotion and intuition often enter the decision making process.

Goal 3

Effective communication should include mastery of standard English, including spelling and grammar, and the ability to interpret symbols other than words.

Goal 4

Mathematical competence should include emphasis on basic arithmetic processes and practical mathematics useful in everyday situations, but it should also include the provision of mathematical skills necessary for success in other courses.

Goal 5

Teaching students to be responsible citizens should include helping them become aware of their own rights and those of society, helping them learn about the functions and processes of our government, helping them understand other forms of government and other societies, and encouraging them to participate within the framework of our democratic society.

Goal 6

Preparing students for a changing society should include helping them to understand the current and future problems of society (e.g. ecological problems) and to develop the skills and emotional attitudes needed to cope with a changing society.

BEST COPY AVAILABLE

Goal 7

The "cultural activities" referred to here are in such areas as music , art, drama, etc. "Participation" as used here can mean either active engagement or passive observation.

Goal 8

The schools should not try to make all students fit into preconceived molds and should provide creative outlets for self-fulfillment.

Goal 10

The development of sound health and safety habits should include teaching students the principles of physical and mental health and personal hygiene, as well as instruction in safety habits (home, school, water, auto, pedestrian, etc.).

Goal 11

This goal deals with each student's personal psychological development. Instruction here should be aimed at helping each student know his own strengths and weaknesses.

The major responsibility in this area lies with teachers, though all professionals who work with students are involved.

Goal 12

This goal deals with each student's sociological development. Instruction should include the development of each student's ability to use positive human relations and to respect the rights of others.

Goal 13

Positive attitudes toward education can be fostered by helping students recognize that education is a continuous process, whether through college, other post-high school education, or self-education. The schools should help students recognize that much education takes place outside of school and that they must develop responsibility for their own education. The schools should also foster the development of intellectual curiosity.

Goal 14

The school should help students achieve basic job skills and/or the coursework needed for continuing education after high school. The schools should encourage in students the development of favorable attitudes toward employment and further education because these attitudes are as important as the development of the necessary skills.

THE FIVE-YEAR ACTION PLAN FOR CAREER EDUCATION: 1972-77

Maryland State Department of Education

GOALS OF CAREER EDUCATION

The long term goals of Career Education are that every student develop the competencies necessary for living and making a living while acquiring thoughtful attitudes toward work and the worker. Working toward these goals, students would become aware of a large number of occupations and careers, be involved in their investigation and sampling, and apply this information to their reasoned choices of the necessary competencies and/or academic backgrounds requisite for one or more of them.

The following goals are stated in the context of the developmental stages: awareness, investigation and decision making, and preparation in which, all things being equal, they would occur. Achievement of these goals, however, should not be rigidly held to the organizational levels suggested. Rather, each goal should be sought by helping adults whenever it is most appropriate for the student or students involved. In addition, work toward some goals suggested for elementary schools may be continued in middle school. In such cases continued exploration of the concepts implicit in each goal may be necessary, since some concepts should not be presented until students have attained the experiences and maturity to interpret as well as understand them.

An Important Note on Student Objectives:

It is neither the wish nor the function of this Task Force to exceed its task: that of presenting a plan which addresses the contribution the State Department of Education can make to its implementaton. To describe those student objectives which would achieve measurable accomplishment of these goals should and must remain within the province and the capacity of the local educational agency. The assurance that this Department will provide assistance with the development of these student objectives is both implicit and explicit in the timetable of strategies and enabling activities which follow these goal statements.

A. Goals of the Awareness Stage

By the end of elementary school years, students should:

1. demonstrate appreciation of the reasons people select certain careers; toward work itself as a means of achieving many satisfactions; and toward work in relation to themselves - as they see it now, and as they "predict" its importance in their futures

25

2. demonstrate an understanding of the life styles, values, major duties and responsibilities involved in a broad range of career areas

3. express their interests in terms of their relatedness to adult hierarchies of work and leisure behaviors

4. demonstrate their ability to relate the acquisition of basic skills of communication and computation to the successful engagement of a multitude of future roles

5. begin to think well of themselves in terms of their unique potential as future members of a service-oriented society

6. begin to develop a set of work values that hold personal meaning for them.

B. Goals of the Investigation and Decision-Making Stage

At the end of their middle or Junior high school experience, student should:

1. possess a knowledge of their interests and talents along with demonstrable basic decision-making skills

2. have an indepth knowledge of several major career fields

3. have become aware of many additional career fields they would like to investigate

4. have explored and expressed their own values, interests, and educational achievements

5. have firsthand acquaintance with the economic system - as consumers and as observers of those who work to produce goods and perform services

6. be prepared to select a tentative high school educational plan best suited to their individual needs and desires

7. be able to integrate knowledge of self and of the world of work in order to identify a career or careers for which they have made tentative decisions.

C. Goals of the Preparation Stage

In addition to the continuing outcomes of previous levels, students should be able to:

1. seek and utilize the specific skill training opportunity they describe as appropriate to their goals

2. become gainfully employed at an entry level appropriate to their career objectives upon leaving high school, or

3. enter a community college, technical institute, preparatory school, apprenticeship orogram, senior college, or some other post high school occupational, or further educational training setting

4. recognize the changing mature of career commitment throughout an individual's lifetime - by knowing how to re-evaluate initial career choices, stating alternative choices, and seeking the experience and training necessary for their implementation.

If the students are to make meaningful career decisions, they will need information about the work of work, an understanding of themselves, and assistance from parents, teachers, administrators, and counselors. Essential to this process are those persons in the community who represent the working world and who can provide the alternative learning environments necessary to the student's self assessment.

When parents, schools, and committies work together, students will be able to receive the necessary assistance for making realistic and satisfying career choices. Moreover, when helping adults from all settings are involved in the educational process, their is mutual gain to be realized by individuals of all ages as they are encouraged to exercise a purposeful control over their present or future roles in the larger society.

The following strategies reflect the contributions of school and community to the implementation of this plan. Each statement of intent carries with it this Department's commitment to coordinate such human resource toward measurable achievement by or before fiscal year 1977.

III. Description

The program in career education in Anne Arundel County which emerged as a result of task force effort is a sequential interdisciplinary program based upon skills, attitudes, behaviors, and experiences deemed necessary for career decision-making.

The design of the program is organized around a conceptual framework encompassing five major areas identified as having concepts for career education; they are career , self, society, technology and economics. For these designated areas, broad conceptual statements channeling student's learning are written. Then many supporting ideas contributing to the comprehension of the major concepts are stated as subconcepts. Since the scope of the program calls for an integration of the learning of all conceptual areas, all concepts are parallel and taught simultaneously.

To measure and evaluate learning outcomes there are behavioral objectives for each subconcept. Since these objectives have been aimed at the student's level of comprehension and developmental stage of learning ability, the program is divided into four levels of learning. There are behavioral objectives for each of these levels with interdisciplinary activities suggested to accomplish the stated outcomes. In determining what should be learned in each of these levels, the development of student's cognitive, affective and psychomotor domains was considered.

The elementary component of the Anne Arundel County Program focuses on career awareness and an understanding of self. The emphasis is on instituting attitudes toward and an introduction to the world of work. Students explore a wide range of careers as they relate to their classroom learning. They are also introduced to the concepts of self, society, economics and technology at an elementary level. Elementary students have the opportunity to gain "hands-on" experience in such areas as technology - learning basic industrial arts skills as they relate to the world of work, typing - learning a basic typing skill at the end of six weeks and utilizing this skill to improve language arts skills, and sewing skills - used to create projects to illustrate content area concepts.

This combination of career awareness, self understanding, and "hands-on" experience makes traditional classroom offerings more exciting and meaningful in both an open space setting and the traditional classroom.

The junior high program is designed to begin narrowing the range of job exploration and to begin the process of identifying career preferences. This requires a closely coordinated effort between teacher, counselor, and the community.

28

This component of the program expands the role of the classroom teacher to include the relevancy of what is taught. Teachers relate their content to the career areas of career, self, economics, technology, and society. Content becomes more than the learning of abstract information but includes its application in terms of self awareness, decision-making, economic awareness, and career preference.

Closely paralleled to this on-going classroom instruction are the efforts of counselors and teachers to help the student begin the process of developing a tentative career choice. This is a narrowing process in which a continuing exploration of careers in terms of abilities, interests and values at grade seven will lead to a tentative career preference at grade nine involving simulated or actual work experience in a specific career area. Emphasis is on involving teachers and counselors as a team to achieve those objectives.

A third aspect of this program involves a closer working relationship between an expanding vocational program at the senior high level and teachers and counselors at the junior high level. Opportunities are provided for selected ninth grade students to gain exploratory skill training through actual use of vocational facilities or by using "packaged" instructional material in the classroom designed to explore a career area individualized for independent use. Vocational counselors assist the junior high personnel in planning and implementation.

At the senior high level, the program continues to emphasize career concept areas and their application to classroom instruction. At this level career education requires a tentative occupational choice. Students may select programs which involve job entry skills or continue preparation for higher education.

There is a continuing effort to expand the program of offerings to include others not traditionally considered aspects of vocational education.

A key element of all these programs is the guidance and counseling component. From its inception, the career education program has profited from the relationship which exists between the goals of career education and those of the guidance and counseling programs in the county. Career education in Anne Arundel County broadens the scope of both programs by emphasizing the unique role of counselors as "consultants". The counselor assigned to career education initiates activities involving both teachers and counselors working as a team.

Emphasis is also given to promoting the placement of all exiting students in either: (a) a job, (b) post-secondary occupational programs, or (c) a baccalaureate program.

The career education program has now expanded to all four areas of the county and can be considered to be in the internalization stage of implementation. Area offices in all four areas have accepted the implementation responsibilities for career education and program specialists at the central office level are infusing career objectives into each content area for implementation. Career resource teachers are assigned to each area office to assist teachers in implementing the program.

IV. Results and Accomplishments

Process goals for 1974-75 were established both at a central office level to provide support for implementation and at the area office level to provide direction for resource teachers in each area office.

At the central office level the follow goals were established with the following results:

A. To establish career education resource teachers in each area office capable of giving effective leadership to career education in that area.

The reorganization of the career education staff became operational on September 3. The county is divided into four administrative areas, each area being staffed by an area director, assistant area director, instructional coordinators and resource teachers for each content area. On September 3, career education resource teachers began a part of the new organization.

The reorganization of career education personnel is intended to internalize career education as an integral part of the Anne Arundel County School System and to eliminate the implication that career education is a project outside the on-going program.

Therefore the new organization reflects:

2 Resource Teachers - Area I

2 Resource Teachers - Area II

2 Resource Teachers - Area III

1 Resource Teacher - Area IV

Also:

1 Guidance Counselor Assigned to Area III

1 Placement Specialist Assigned to Area IV

1 Typing Specialist Assigned part time to Severn River Junior High School and part time to the elementary language-arts-typing component

1 Instructional Aide serving all areas

1 Secretary assigned to the Central Office

1 Project Director (Coordintor of Career Education) Assigned to the Central Office.

B. To assist each program coordinator identify career objectives appropriate for the program area and assist in the development of a format for infusion.

The initial meeting on September 13 to introduce program coordinators to the concept of infusion was successful in that each content coordinator expressed a willingness to be involved. The entire effort was given priority status by the Assistant Superintendent for instructional Programs and the Director of Curriculum. The goals of each program area was to:

1. Identify career education objectives relevant to the program area
2. Develop a format for establishing the relationship between career and program objectives
3. Suggest activities for implementation.

It was decided that to accomplish these goals a week long workshop would be held. Each workshop group would be represented by both content and career education specialists under the direction of the program coordinator. The Director of Curriculum and Coordinator of Career Education would serve as consultants for all workshop groups.

The math-career education session was held from November 18 to November 22. Math, career education, curriculum, and instructional specialists were represented on the committee. The committee set the following goals:

1. to design a model for infusing career objectives into the math curriculum. The revised mathematics curriculum will relfect this.
2. to design an interim document which relates specific mathematics transitional objectives to career education objectives. Activities are suggested to support the relationship. This material will be incorporated into the revised mathematics curriculum.

The committee accomplished both objectives and the interim publication is being prepared for publication.

Language arts accomplished its task in two sessions, November 25-27, and December 2-3. This group was representative of career education, and language arts specialists. Since they were operating with a more traditional curriculum several model units were also developed to serve as prototypes for future curriculum revision. This material is now being printed.

Social Studies, career education, and curriculum specialists met during the week of December 2-6. The group was highly motivated and based their work on a previously established format for implementation. Some thought had also, already been given to the possible correlation of social studies and career education objectives so that the session was a continuation of this process. This material has been printed for distribution.

A committee representing art met during the week of December 16-20. It was decided on the 16th that additional work needed to be done on the art curriculum itself prior to involving additional career education personnel.

The foreign language committee met the week of February 24 to the 28. Although this task at first appeared to be more formidable than the other areas, the committee produced an infusion product that all member of the committee felt would work. The committee consisted of foreign language, career education and curriculum people who worked well together as a team. The excellent product produced reflects this cooperation. This material is now being typed.

The science format created a year ago as a pilot effort in infusion still appears to need some revision. The experiences gained in working in other curriculum areas will be benefical in making this format more flexible.

This infusion material will form the basis for all implementation efforts beginning in 1975/76 as it supports the concept that career education should be a part of existing curriculum. A copy of the social studies-career education infusion material is attached to this report for examination.

C. To provide adequate resources in each area for implementation of the program.

An excellent program was designed by the resource teachers and media specialist in Area II to acquaint area media people with the career education material coming to their schools. The material was purchased with Title II funds and provides the basis for a mini-resource center of career education material in each school. This material is now in the schools.

In addition Area I, III, and IV have comprehensive materials centers which provide material for implementation. Area II is also building a central resource center to support implementation in addition to the mini-resource centers in each school.

D. To conduct at least one county-wide workshop in career education for any teacher interested in becoming more actively involved in the program.

Approximately 75 guidance counselors attended a one week workshop conducted from August 12-16. The workshop was a joint effort of the Coordinator of Guidance, the Coordinator of Career Education and the Director of Vocational-Technical Programs. The purpose of the workshop was to:

1. Further familiarize counselors with the career education program and to provide counselors with the opportunity to identify career objectives relevant to the guidance and counseling program.

2. Provide counselors with activities which they could in turn use with teachers in assisting them in implementing a career education program. The activities were in the area of self, decision-making, values clarification and the use of community resources.

3. More throughly familiarize counselors with the vocational-technical programs so that they could better advise students.

In-service sessions have also been held in area offices to acquaint area personnel with the progress of career education and to familiarize them with the expanded role of resource teachers.

On September 6 a group of Anne Arundel County Educators, and businessmen met with representatives of the Maryland State Department of Education to discuss the feasibility of instituting local industry visitations for Anne Arundel County Teachers. Suggestions for visitations came from business and industry representatives while the content for the course to be offered as a part of the workshop came from the educators and Maryland State Department of Education Representatives. Graduate credit for the course was offered through the University of Maryland on an optional basis. The course began on February 5 and the visitations were conducted from July 7 to July 18.

The county-wide workshop offered for professional credit was completed on November 26. The informal evaluation conducted during the last session was extremely positive, as well as helpful for future sessions.

County-wide in-service was conducted on February 17. Dr. Kenneth Hoyt and Mrs. Joyce Cook discussed career education at the national level while Mr. Niel Carey and Mrs. Nancy Pinson discussed the progress at the State level.

As mentioned previously, each area also wrote process goals to assist career education resource teachers in their implementation efforts. The following is a statement of their goals and accomplishments.

INTERIM REPORT

Submitted by Area I

Sheila Redmiles
Don Welch

I. Goals and Objectives

Establish the kind of working relationship with the resource teachers in the Area I Office that will facilitate the infusion of career education objectives into all parts of the curriculum; and, through these other resource teachers, speed implementation of career education.

Become familiar with, and assist schools in Area I to familiarize themselves with, borrow and/or purchase, and field test materials of instruction which relate to career education objectives.

Support principals and teachers in Area I schools as they may need our services to implement career education.

A. Procedure

Two career education resource teachers have serviced 27 schools in Area I. To acquire services of a resource teacher, a classroom teacher makes a request to the school principal, the school principal to the curriculum coordinator, and the curriculum coordinator to the resource teacher. In most schools, this procedure pertains to a "first" contact. Additional contacts between the resource teacher and classroom teacher are often arranged directly. Since the school principal has the responsibility for curriculum program development, this process keeps all personnel informed of career education activities taking place within the school.

II. Results and Accomplishments

A. Goal I - Cooperation Among Resource Teachers

Resource teachers in the Area I Office have worked effectively with career education concepts and facilitated the infusion of career education objectives into all parts of the curriculum.

An exchange of program philosophies and practicalities was realized between career education resource teachers and the gifted, media specialist, math, science, social studies, and special education resource teachers.

Resource teachers gave support to career education resource teachers during the U.S. Office of Education evaluation in January, 1975. These resource teachers discussed the ways in which they were helping to infuse career education concepts into their particular subject areas.

In additional, joint projects were undertaken with the media specialist and speial education resource teacher, and the media technician.

The special education resource teacher worked with the career education resource teachers to help initiate a curriculum for Marley Junior High School special education teachers, employing hands-on projects to teach reading, language and math; and at Corkran Junior High School cooperated in developing curriculum for an alternative education program.

The media specialist resource teacher supported and cooperated with career education resource teachers in many ways. Her regular contact with media specialist in the schools helped immeasurably in having career education mini-resource centers established in media centers. She assisted in establishment of the three model resource centers at Rippling Woods Elementary, Lindale Junior High, and Glen Burnie High School. She worked regularly with a career education resource teacher in a sixth-grade class at Quarterfield Elementary School, to have them produce and publish a dictionary of occupations. She has assisted in the task of processing and cataloging Area I career education resource materials into the media center at North Arundel Vocational-Technical Center.

The media technicians assisted career education resource teachers in the production of many learning stations. One media technician worked with the children at Quarterfield Elementary School on the Dictionary of Occupations project - teaching the students techniques of illustration, and helping them plan the illustrations which accompanied each entry in their dictionary, and preparation of the cover and title page. He supported a career education project at Rippling Woods Elementary School where he undertook the technical direction and instruction of a group of children who were simulating a television news department. During a career day at this school he participated as a resource person, talking with fifth and sixth-grade children about photography as a career.

Area I career education resource teachers worked with a committee of math resource teachers and special education resource teachers to implement the writing of career education objectives into their respective curriculum guides.

B. Goal II - Materials of Instruction

Resource Center

Area I resource materials were moved from Brooklyn Park High School to the North Arundel Vocational-Technical Center's Media Center. These materials are being processed into the Dewey System and incorporated into the card catalog of the media center. All materials are available for loan to any school in Area I. Schools in the area can come directly to the media center to check out desired materials; or the media specialist at the Vocational-Technical Center will accept telephone requests and make delivery of the materials through the routine "basket" delivery system of the school system. Career education resource teachers may still check out materials and make delivery to teachers when the situation warrants.

Model Collections

Model collections of current career education materials have been established at Rippling Woods Elementary, Lindale Junior High, and Glen Burnie Senior High. These model collections are a joint effort of career education and the media center utilizing Title II funds. In the media center of each school materials are set up so that Area I teachers may come and preview them. A list of the materials placed in each center may be found in the Appendix.

Mini-Resource Centers

Most schools in Area I have established mini-resource center of career education materials in the media center. These centers include books and audio-visual materials as well as various career education reference material.

New Material Given to Schools

In addition to new material placed in the model collections, some schools were given new materials. Game-Sim was placed at Corkran Junior High, Glen Burnie High's English department received forty copies, and a special class at Corkran Junior High 12 copies of My Job Application File by Kahn, Tong, and Jew. Six trays of "sound-on-slides" of various occupations were given to Quarterfield Elementary.

Material Purchased for the Resource Center

A list of material purchased during the year for the Area I Resource Center may be found in the appendix.

Material on Loan to Area I Schools

The following schools in Area I utilized career education materials from the Resource Center this year:

- Andover High
- Brooklyn Park High
- Glen Burnie High
- Corkran Junior
- Lindale Junior
- Marley Junior
- Ferndale Elementary
- George Cromwell Elementary
- Glen Burnie Park Elementary
- Glendale Elementary
- Hilltop Elementary
- Marley Elementary
- Quarterfield Elementary
- Richard Henry Lee Elementary
- Rippling Woods Elementary
- Southgate Elementary
- Woodside Elementary

C. Goal III - Support and Services Provided

In-Service Presentations

In September career education resource teachers conducted an in-service meeting for the Glendale faculty regarding value clarification and decision-making. Teachers learned about the decision-making process and participated in decision-making activities. Materials of instruction and learning stations related to the topic were previewed by the faculty. Each teacher planned a lesson or constructed a learning station of their choice.

The teachers at Quarterfield Elementary School met by grade group with career education resource teachers in September, to review rationale and objectives of the program, and to make long-range plans for career education in their school.

In October a career education resource teacher planned with the principal and total faculty hand an enthusiastic implementation of career education, but they were interested in learning about additional ways they might infuse career education into the total curriculum.

In November career education resource teachers met with the faculty of Oakwood Elementary to show examples and discuss ways of infusing career objectives into their total curriculum. Learning stations were displayed.

A career education resource teacher met with department chairpersons at Glen Burnie High to discuss additional ways of infusing career objectives into their content areas. Services provided by Area I career education resource teachers were enumerated. Materials of instruction were displayed.

The career education resource teachers led two 50-minute sessions of the Andover High School teachers' in-service meeting in January. A total of nine teachers attended the sessions. After a brief introduction explaining the kinds of services teachers might expect from the area resource teachers, the remainder of the session was devoted to having teachers react to three papers and attempt to arrive at a consensus concerning the questions on each paper. These papers were intended to help the group develop a better understanding of career education goals and some ways that these goals might be met.

III. Conclusions

A. Idea Booklets

Idea booklets (suggested units) have been prepared for use by teachers. These booklets were prepared in such a way that teachers could use them literally, or as a source to spark ideas in the teachers' minds.

Sewing in the Elementary School has been used at Belle Grove Elementary and Rippling Woods Elementary with teachers and parent volunteers to give basic information about working with elementary children and the sewing machine.

What Will I Do has been used by Glendale Elementary and Rippling Woods Elementary Schools. This booklet contained suggested lessons and a learning station for teaching the processes of valuing and decision-making.

A Bookbinding Project was used at Marley Elementary and Quarterfield Elementary Schools. This was to develop career awareness.

Making a Miniature Electric Board was used at North Glen Elementary School to give experience in measurement and use of the ruler.

Make a Puppet Stage was used at Richard Henry Lee Elementary, Woodside Elementary, and Rippling Woods Elementary Schools. The completed project was used throughout these schools in their language arts program.

Why Do We Teach Our Children To Read was used at Rippling Woods Elementary School where a group of students developed their in-school TV station.

Make a Hanging Planter was used at Linthicum Elementary and Woodside Elementary Schools, and Marley Junior High School.

Making a Card Holder was written for and used by Rippling Woods Elementary School as a functional reading project. Students working on this project made number card holders for their cafeteria.

B. Special Happenings

A career open house was held at Quarterfield Elementary School. Letters of invitation were sent home to all parents, as well as to school administrative personnel; and large numbers responded. One member of the board of education was numbered among the visitors. All visitors had an opportunity to see lessons in progress representative of the on-going career education program, and ways the teachers at all grade levels were infusing career education objectives into their daily curriculum.

At Rippling Woods Elementary School a series of "Career Days" were held. On May 29, all fifth and sixth-grade students were rotated through a series of presentations by a doctor, a cartoonist, a chaplain, a pilot, a county policeman, a ventriloquist, a photographer, a computer instructor/operator, a judge, a telephone company representative, and a scuba diver. The thrust of this day was to develop career awareness. The first and second-grade pod extened their career days to two days (June 5 and 6). A letter was sent to all of their parents in May, asking for volunteers who might be willing to share their hobbies or careers with the children. Career education resource teachers were asked to participate in this program. Four sixth-grade boys were instructed by a career education resource teacher to work with the younger children in the use of tools; and these boys worked with all 220 first and second graders, helping them to complete three sets of geometric dominoes. A group of mothers worked with the entire group one of the days, helping them prepare their lunch. The career education resource teachers worked with all children on a culminating activity related to self awareness - all children completed a personal coat of arms. Filmstrips related to careers were used at one station. Volunteer resource people at other stations during these two days introduced children to the following careers and hobbies: aerospace engineer, pharmacist, employee relations, heating and air conditioning, posion control, telephone installation, rocketry, ceramics, electricity, air pollution control, nursing, flower pictures, hairdressing, veterinarian, cartooning, air traffic control, and commercial food management. Evaluation of these career days by children, parent, resource volunteers, and school administration was enthusiastically positive.

BEST COPY AVAILABLE

C. Community Resource Speakers and Field Trips

Career education resource teachers have assisted teachers in locating community resource speakers for their classrooms. A file of available speakers exists at the Area I Office and the information therein is supplied to teachers upon request. Career education resource teachers assisted Woodside Elementary in planning for a school file of community resource speakers drawing from parents in the school community.

Career education resource teachers also helped to set up various field trips throughout the year. In addition, career education funds made possible the following trips:

School	Trip
Ferndale Elementary	Annapolis Legislature
Lindale Junior High	Social Security Administration in Woodlawn
Marley Elementary	Smithsonian Institute Long Hill Communication Center Friendship International Inn
Marley Junior High	Kennecott Company
Quarterfield Elementary	Glen Burnie Post Office General Motors Assembly Plant
Southgate Elementary	North Arundel Vocational-Technical Center

D. Technology/Sewing/Typing Programs

Career education resource teachers supported various technology, sewing, and typing programs during the year. Assistance in planning was given. Demonstration and/or introductory lessons were often taught.

Assistance with technology projects was given to the following schools:

Linthicum
Marley
North Glen
Park
Point Pleasant
Quarterfield
Richard Henry Lee
Rippling Woods
Southgate
Woodside

Assistance with sewing projects was given to the following schools:

Belle Grove
Rippling Woods

Assistance with typing programs was given to the following schools:

Quarterfield
Rippling Woods
Marley Junior

E. Corporations

Career education resource teacher support was given to three elementary schools where fifth-grade social studies teachers wanted to organize corporations as part of their unit on economics. The kind of support provided varied from school to school.

Quarterfield Elementary School asked for general ideas concerning how they might go about organizing the corporation and how to infuse this project into other curriculum areas. A lawyer was called in as a resource person to talk with the children, and get the corporation organized.

Woodside Elementary School asked for a suggestion of a specific item which their children might manufacture. Plans were prepared for them, and one teacher was instructed in the processes of using the tools and equipment he would have the children use in producting the product.

Park Elementary School had teachers experienced in this unit. They were, however, interested only in manufacturing and selling games; and were looking for new ideas in games the children might make. Five plans were parpared, along with completed examples of each, and given to those teachers.

All three schools experienced success.

F. PTA's

Quarterfield PTA Meeting - Mr. Jervis gave an overview of Career Educatin. Resource teachers discussed specific on-going school activities. Examples of learning stations in use at the various grade levels were available for parents to see and experience.

Rippling Woods PTA Meeting - A career education resource teacher presented the program. An overview of career education utilizing the new slide-tape was presented. Specific school involvement in the program was discussed, and parents were shown samples of work completed by the students. A materials display, containing materials from the model collection of career education materials, was set up. Copies of the State goals for career education were available for the parents to take home.

Linthicum PTA Meeting - A career education resource teacher presented the rationale of career education and a brief explanation of the total program - its status and thrust in the Nation, in the State, and in the County. A brief slide-tape was used to explain the process of infusing career education into the elementary school curriculum. The group learned about the existing programs in their school, and some examples of on-going programs were displayed to them.

INTERIM REPORT

Submitted by Area II

Suzanne Gonzalez
Eugene Polm

Area II is an administrative instructional grouping consisting of two senior highs, four junior highs, one middle school, and eighteen elementary schools. In 1973-74, following the Board of Education's approved curriculum implementation schedule, the area office placed emphasis on the newly designed social studies and science programs. Initial implementation of career education in Area II was planned for 1974-75.

The two resource teachers assigned to the area office and the Assistant Area Director planned specific implementation goals and steps to accomplish same. Work to date has generally followed the goals as established, and all goals have been attained to varying degrees.

The four major goals for the year were as follows:

1. To orient all Area II personnel (coordinators, principals, administrative staff, teachers, para-professionals) to career education.

2. To infuse career education objectives into science and social studies, K-12 in scope.

3. As specific areas are identified, to infuse career education into content areas other than social studies and science.

4. As schools identify need, implement the technology phase of the program.

Relative to Goal I, all school and area office administrative personnel received in September a general orientation to the concept of career education and to the specifics of the Anne Arundel County program. Following this meeting, dates were established and meetings were held with the faculties of each school; all schools with the exception of one elementary school had received by mid-year an orientation to career education. The remaining school was involved in a special staff development project and was not scheduled for this reason this year.

As indicated by Goal II, because of the prior implementation emphasis on social studies and science, and since career education involves an infusion process, it was determined that the initial career education effort would be to infuse the program into the emphasis areas of social studies and science.

Social studies infusion proceeded well. Career education resource teachers, working with the social studies resource teachers, assisted in the development and writing of many units which incorporated career education objectives and activities. Assistance by resource teachers has been given in over two-thirds of the schools. A specific written procedure which suggests career education inclusion in the writing or adapting of units provided additional impetus. The nature of the social studies program readily lends itself to career education infusion, and a county-wide curriculum infusion committee developed recommened objectives for each level of the social studies program. In addition to the inclusion of objectives and activities in written units, field trips were taken by some social studies classes to local industries, guest speakers were utilized, and technology related activities were employed.

Science-career education infusion proceeded more slowly. Initial efforts were made in this area in the form of meetings with science teachers in ten schools in the fall. These meetings attended by both career education and science resource personnel provided teachers with suggested objectives and activities for inclusion in their science units. During the course of the year assistance was provided specific teachers in science who requested it. Demonstration lessons were given, field trips and speakers were provided, and materials were obtained for classroom utilization.

Relative to Goal III a variety of services were provided teachers in Area II this year. These inclued, but were not limited to the following:

General

1. Materials were provided each school for the establishment of mini-resource centers. These materials were selected from pre-determined lists and resulted from a survey of the schools which determined those materials which the schools did not have.

   A special one day in-service conducted by the career education resource teachers and the Area II media resource teacher was held for all media specialists. This in-service introduced the media specialists to some of the materials which they received that day, provided some suggestions and ideas relative to utilization of the materials and teacher assistance. Time was provided for examination of the materials.

2. "Career World" magazines and guides which provide information and lesson plans for career education infusion in many subject areas were purchased and were distributed monthly to schools.

3. Career education resource teachers worked with the special education resource teacher throughout the course of the year. Assistance was given special education teachers with career education infusion into their curriculum. Special education teachers were encouraged to employ career behavioral objectives in unit construction and as the vehicle for relevant teaching of content.

   A half-day in-service was held in January which gave a general overview of career education and its implications for special education. Examples of units were provided teachers and a working session was held for discussion and the initiation of units utilizing career education objectives as the basis.

   Following this in-service, career education resource teachers assisted several junior high special education teachers who were making efforts at infusion. Demonstration lessons were given, materials were provided, and field trips were taken. Additionally, extensive meetings were held with several teachers relative to their concerns about their orthopedic students and evaluation of all special education students in their classes with regard to abilities and interests. To date these meetings have been quite productive and have provided for a useful exchange of information. Guidance personnel actively participated in the meetings.

4. All Area II physical education teachers participated in an in-service for physical education-career education infusion. The teachers were given the opportunity to examine the career education objectives and to select those which they felt to be most appropriate and relevant to their teaching. A compilation of these objectives was sent to the teachers for further examination and input.

Elementary

1. On the elementary level, career education concepts, objectives and materials were incorporated in a variety of ways. For example, interest-hobby clubs employed guest speakers and took field trips related to the career aspects of the club. In one school, a group of gifted students became actively involved in an extensive career education-language arts-social studies-media project which culminated in a parent presentation

in June. Kindergarten teachers in some schools have developed and are utilizing prop boxes for career awareness activities. Some classes utilized ITV career programs.

Middle School - Junior High

1. At the middle school - junior high level, one school, in attempting to implement a daily advisory period for students, developed a number of topics through a committee of teachers and coordinated by one of the guidance counselors. These topics were career related, and career resource teachers worked throughout the year in an advisory capacity to this committee. In addition to the writing of two sample units, funds were provided for the purchase of supportive audio-visual material.

   Another junior high school is in the planning stage of developing a career center. Funds have been provided for the purchase of materials for this purpose, and materials will be ordered by July 1. Guidance counselors and resource teachers are presently selecting appropriate materials.

Senior High

1. One high school, employing a full-time career education aide, has established the beginnings of a career center. This center contains all mini-resource material as well as additional literature for student use. Guest speakers have been utilized relative to specific occupations for interested groups of students, field trips have been conducted, and some gifted students are receiving occupational experiences outside the classroom.

   At the other high school subject area meetings were held with most departments with a view to assisting in the infusion of career education. Materials and suggestions were provided; teacher input and suggestions were encouraged.

Relative to implementaion Goal IV, in September there were three elementary schools in Area II with technology centers. At the end of April only six schools had fully operational ones. At the present time all eighteen elementary schools have fully-installed technology centers.

During the course of the year a number of the schools utilized the centers in the construction of various articles related to career aspects of their teachings. Social studies provided one of the major areas for technology utilization, but activities were also carried on in a number of other areas such as remedial reading and special education.

Additional work by career education resource teachers in Area II this year included the following:

1. A career resource room for area-wide utilization was established in one of the elementary schools. Approximately $1500 worth of material was ordered throughout the course of the year. This material was selected for its utility and appropriateness at varying grade levels in support of career education infusion. Most of the material has arrived.

2. A field trip-resource speaker list was compiled and up-dated throughout the year. This list has assisted resource personnel in field trip and speaker location for teachers.

3. Various dissemination activities were conducted. Among these were the following:

   a. one CAC presentation;
   b. three PTA presentations;
   c. a talk to the Annapolis Rotary Club;
   d. participation in a Consumer Education night at one of the high schools.

4. The two resource teachers served on two curriculum infusion committees, Language Arts and Social Studies, charged with the purpose of infusion of career objectives into the respective curricula.

5. Required evaluative testing was conducted as required.

This report represents the work, direct contact, and influence of career education resource personnel in Area II this year. Relative to the specific implementation goals as established, Area Office personnel consider the initial implementation of career education to be successful.

INTERIM REPORT

Submitted by Area III

Jane Polm
Bob Smith

The goals for Area III and specifically for Career Education personnel in the area formed the basis of operation from an Area Organization. These goals have served as guidelines for the implementation process of the program as well as meeting the needs of students at all levels of learning. Prior to re-organization implementation procedure had already begun in Area III at the elementary level, therefore much of the emphasis for the 74-75 school year was directed toward the Junior/Senior High.

Area Goals

* 1. Implement countywide instructional programs

* 2. Provde instructional support services to area schools for program implementation, maintenance and improvement

3. Improve the effectiveness of area and school staffs

4. Provide facilities, equipment and materials for the operation of school programs

Objectives

1. Implement the county adopted mathematics program in the elementary schools; refine and extend the program in secondary schools (and Four Seasons)

2. Refine and extend the Unified Science program in all area schools

* 3. Integrate career education principles, content and techniques into the various disciplines

4. Implement the county-adopted social studies program to the extent schools are ready; prepare staffs for full implementation in 1975-76

5. Initiate the support activities for improvement in the reading program

6. Improve and extend existing instructional programs not yet designated for county level task force development

* 7. Develop closer coordinator of instructional services and pupil services within the instructional services team

* 8. Provide adequate instructional staff and instructional support personnel at the school and area level

9. Assist schools in the implementation of accountability procedures

10. Identify exceptional needs of area students and assist schools in providing programs

NOTE: * These goals and objectives are in line with the goals and objectives for the county career education program.

Goals for Career Education Resource Personnel for Area III

1. Strive to implement the program fully at the secondary level
2. Maintain program and improve areas of weaknesses at the elementary level.
3. Assist teachers by providing a wide range of services to meet their needs.
4. Implement career education jointly with other programs by infusing the career concepts into all program areas.
5. Integrate technology aspects of program as part of regular classroom activities

A Perspective of Career Education in Area III Schools - 1974-75

Through a variety of meetings, (mini-workshops, staff and department meetings, in-service training, one-to-one contacts) the purpose and implementation procedures for Career Education were explained and demonstrated to the faculty and staff at all Area III schools. Continuous contact was established through individual school meetings with faculty and staff throughout the school year.

Through these meetings the Career Education personnel planned with teachers various strategies for integrating career objectives into the content areas. We also demonstrated the use of related Career Education instructional materials to teachers at all levels K-12. We assisted teachers in establishing learning activities to complement the planned objectives for their particular unit/units of work. Continuous services are provided for teachers, principals, and coordinators as the needs arise to insure an easy transition to incorporating new techniques and to provide meaningful experiences for youngsters.

The infusion of Career Education objectives into each of the content areas is being accomplished satisfactorily. As curriculums are revised and/or rewritten Career Education personnel have been involved in planning and writing sessions to insure a broader coverage for career education within a particular discipline. The career education personnel have assisted teachers in a number of professional workshops (Social Studies, English, Science) as they planned units of work in that discipline. These professional workshop sessions were helpful in showing that career education is an integrated part of all content areas and is not a separate program. Almost all disciplines have been infused with Career Education objectives. As these new curriculum- are disseminated, it is important that total orientation programs for principals and teachers be presented.

Career oriented materials of instruction as well as community resources play an integral part in any program. However, we have found that materials geared specifically to units of work, developing self concept and jobs/occupations have been in the greatest demand for classroom instructional purposes. Taking into consideration the information collected during the school year concerning the use of materials we will continue to evaluate the new Career Education materials as the development of the Area III Resource Center progresses. Also, the career education resource centers in several of the Area III schools. Cooperation from several sources as: businesses, industries, government (federal/state/local), community college and individuals has been excellent. The knowledge and experiences that these resource people have brought to the students is valuable information generally unattainable.

Through mini-workshops and in-service sessions a number of teachers were instructed in the safety and use of some of the tools involved in the technology program. During these sessions teachers became familiar with the use and the handling of the technology equipment and constructed a project. After these sessions teachers are able to become more involved in classroom activities using the technology center with their students. At that stage of the program the career education resource personnel are asked to assist the teacher and students in planning and carrying out the activity. Experiences with these kinds of activities in a classroom setting help to make aware of the relevance of the content material being taught.

The automated instructional typing program is offered largely to promote the learning process of the basic language arts skills. Teaching children typing at an early age given them a mechanical skill which is helpful in expression and useful in the world of work. Typing a word helps a child learn it better and faster from its spelling to proper use of it in a sentence. Typing papers gives the children a sense of achievement. Area III schools implementing the typing program have found that it totally enhances the language arts program. The excitement created by this new experience is stimulating and self-satisfying to students.

We have had visitors from different areas of the country to visit our program for the purpose of learning more about the career education implementation process K-12. Visitors came from the university, local colleges and Joint Council of Economics to discuss aspects of the Career Education program.

The Career Education resource personnel have also visited other state/local programs as well as attended conferences in different areas of the country to further enrich their knowledge of Career Education.

Evaluations of the Career Education program have been conducted this school year by the Career Education personnel using a variety of instruments directed at both staff and students for the purpose of obtaining information for measuring the progress of the program as outlined by the Federal Guidelines.

Future Consideration for Improving the Effectiveness of the Career Education Program

1. Ways to assist teachers in gaining the most effective and efficient use of instructional materials.

2. Hold school-based mini-workshops in technology to motivate teachers to use the services of the Career Education resource personnel for Career/Technology related activities.

3. Consider additional ways [illegible] informing school personnel the availability and services of the resource personnel.

4. Create more situations in which resource personnel are more directly involved in the teching/learning process.

5. Consider additional ways to gain feedback about the appropriateness of suggested activities and instructional materials.

INTERIM REPORT

Submitted by Area IV

Aretha Stubbs

I. Goals and Objectives 1974-1975

A. Long range goal: To establish an effective Career Education program in all the schools of Area IV.

B. Goal for the year: To initiate an approach to integrating Career Education in content areas in at least one half of the schools assigned to me.

C. Process Goals:

1. Relate traditional classroom instruction to Career Education objectives.
2. Relate technology activities to classroom instruction.
3. Relate typing skills to classroom instruction.
4. Relate sewing skills to classroom instruction.
5. Emphasize career decision-making process.
6. Exploration of job clusters.
7. Make counselors more available to teachers and students.
8. Involve special classes in Career Education.

Process Goal I - Objectives

1. In-service programs will be set up for school staff involved in career education.
2. Every teacher in at least ten schools will demonstrate an understanding of the infusion process.
3. Establish a mini resource center in at least ten schools.
4. Establish a central resource center at Area IV Office for use by teachers in the area.

Process Goal II - Objectives

1. At least two schools will have technology centers in which the activities are directly related to a career-oriented unit.

2. At least one teacher in schools with technology center will be able to train staff and students in use of tools, materials and equipment.

Process Goal III - Objectives

1. At least one new elementary school will participate in the elementary - language arts typing program as a means to train basic language arts skills.

Process Goal IV - Objectives

1. At least three new elementary schools will use sewing machines as a means of relating classroom instruction to a practical skill.

Process Goal V - Objectives

1. A majority of elementary teachers in two schools will be able to show evidence of having utilized the techniques of the career decision-making process.

Process Goal VI - Objectives

1. At least two schools will devise and implement an approach to job cluster exploration.

Process Goal VII - Objectives

1. Counselor from each new project school will participate in the planning and implementation of the in-service program for that school.

Process Goal VIII - Objectives

1. Involvement of learning disability class in Career Education in at least one school.

2. Involvement of at least two schools for the handicapped in career-related activities.

3. Involvement of Special Education classes from at least six schools in career education.

4. Involvement of the gifted student from at least one high school.

II. Procedures

I am assigned to the Area IV Office. I report to the Assistant Area Director. The Coordinators also report to the Assistant

Area Director. A request for assistance from a particular school comes directly from the principal to the Assistant Area Director with a copy going to the Coordinator. The Assistant Area Director then directs me to provide the requested services with copies of the directive going to the Coordinator and the Principal. Once this procedure is initiated and I have been involved in career-related activities at a particular school, follow-up activities are done by my informing the Assistant Area Director's Office of the time and nature of the activity. These follow-up activities are usually initiated by request from the principal, coordinator or teachers directly to me; or by my suggestion.

III. Results and Accomplishments

A. During the school year 1974-1975, the basic overview of Career Education was given at twenty different schools in Area IV. The entire staffs of these schools were present at these overviews. They were introduced to the concepts of career education and to career objectives and were given a preview of materials for possible use in the implementation of career education in their schools.

In depth in-service training was conducted at twelve schools in Area IV. Each teacher had the opportunity to develop a unit outline which infuses career objectives into existing curriculum and to examine career education materials that could be useful in implementing their units. During the course of this training, activities were also suggested to the teachers that would help them. There were approximately one-hundred eighty-five total participants in these twelve in-service training sessions.

In addition, an in-service workshop on career infusion was conducted for a select group of social studies teachers in Area IV to develop activities for social study cells and career education objectives that had been identified. These social studies teachers were from the elementary, junior high and senior high levels.

Assisted the media personnel at ten schools to set up mini-resource centers. Existing career education related materials already in the library (books, pamphlets, film and all other media material) were assembled in one area. Also, additional materials as needed were purchased. Usually learning stations were set up in the mini-resource center and students were introduced to it. One school set up an entire room with career education materials for use by students and teachers.

A fully equipped central resource center was established at the Area IV Office for use of teachers in the area. These materials are disseminated to all the schools by request on a loan basis.

B. Functional technology centers were established at three schools. At least one teacher in each of the schools is able to train staff and students in the use of the tools, materials and equipment available at the centers.

C. Typewriters were utilized in one elementary school to assist the student in language arts. Automatic film loops are being used to teach typing skills. Students use the typewriter for spelling words, and doing creative stories.

D. During the past year the sewing machine was used as an integral part of classroom instructions. In Special Education they were used to help in math and reading concepts in two schools. At another school the sewing machine was used in art and social studies.

E. In two schools a majority of elementary teachers participated in half-day in-service meetings emphasizing the techniques of the career decision-making process. These workshops were conducted by a career education resource counselor. In addition, students at one school participated in the career decision-making process by taking over for one half-day, the entire staff work of the school. They planned lessons, conducted fire drills, instructed, did custodial jobs, etc. The jobs were put in clusters and the students applied for them in relationship to their interests. At five other schools student participate in the career decision-making process.

F. Of the schools that were involved in career education and who had counselors, some participanted in the planning and implementation of the in-service programs for their schools. A few helped arrange for speakers and conducted intere-t surveys using various career education materials. One counselor is doing planning for a career center for the coming school year in her school.

G. There was involvement of a learning disabilities class from one school in career education. The human relation kit was used to help the students to develop better understanding of self and to help them develop better relationship with others. They were also involved in job explorations.

A field trip and special job related training were arranged for one school for the handicapped where the student got training on the proper maintenance of hotel rooms by the

the Inn-keeper and staff of the Holiday Inn. As a result one young lady was hired on a trial basis. Further, an outlet was secured for display and marketing of ceramics produced by the students of that school.

As an outgrowth of career related activities, a field trip was arranged for another school for the handicapped which resulted in a in-depth tour of the food service facilities at the Naval Academy. Extensive activities in job explorations were engaged in at this school.

Special Education classes from six schools in Area IV were involved in varied activities in Career Education. For the most part the activities centered around the self areas and job explorations.

An apprentice program is being designed for gifted seniors that will allow them to actually work with a professional person of their interest during the school year for at least two hours a day, four days a week without pay. This will allow the students to make better decisions relative to careers or majors in college.

H. In addition to the eight areas that are activities related to specific objectives set up for the year, there were other accomplishments during the year. The most notable was with the PRIDE program. Assistance was provided in many aspects of this program including the acquisition of funds, provision of materials, identification of career objectives, etc. This program is an attempt to re-motivate seniors who are reading two to three grade levels below the norm by involving them with the teaching of elementary children. Emphasis is on self-concept, exploration of careers in working with young children and bringing up their own reading levels.

Further, there was also involvment in off-the-job outreach in the community. One such involvement was a weekend participation with the LINKS where high school girls were presented material on the changing role of women in careers, instructed on filling out job applications, job ethics, values, etc.

IV. Conclusion

We were slightly over ambitious in our goals and objectives for the year. Yet we feel that we more than met them. Career Education was introduced in all but five of the twenty-seven schools in Area IV. There is much evidence of an increased interest in and understanding of the importance of career education by school administrators and teachers. With sufficient follow through it appears that career education can be internalized as part of the educational process in the area. But with the limited staff in career education, the increase of interest and activities creates problems in terms of feedback maintenance and follow-up activities.

INTERIM REPORT - GUIDANCE COMPONENT
July 1, 1974 - June 30, 1975

Submitted by:
Nannell Grube
Counselor assigned
to Career Education

I. Goals and Objectives

The original goals of the Guidance component of Anne Arundel County's Career Education program was to "... make the expertise of counselors available to teachers and ultimately to more students". To implement this goal, a "Model for Counselor - Teacher Interaction" (copy attached) which could be implemented in any appropriately staffed school, was developed in the 1973-74 school year. In order to field test that model in depth, in a realistic, workable manner, I was assigned to Area III of Anne Arundel County in July of 1974.

The following specific objectives for the Career Education Guidance Program in Area III were defined:

1. To assist schools in implementing the model for counselor-teacher interaction.
2. To establish the role of the counselor assigned to career education as a resource person.
3. To assist school counselors in developing strategies for working directly with teachers concerning program and curriculum both individually and in small groups.
4. To provide professional growth sessions, when appropriate to career education, for school staff.
5. To develop a repertoire of career guidance resources including commercial and any other available materials.
6. To integrate career guidance activities into other appropriate subject areas.

II. Procedures

Area III is located in the western part of Anne Arundel County and includes the communities of Maryland City, Fort Meade, Severn, Odenton, Gambrills, Millersville, Crofton, and Crownsville. There are 23 schools in the area with a total student population of 17, 600. Six of these schools, serving 9,200 students, are involved in the implementation of the counselor-teacher model. They are: Arundel Senior High #1 and #2 (double sessions), Arundel Junior High #1 and #2 (double sessions), MacArthur Junior High, Harman Elementary, Maryland City Elementary and Van Bokkelen Elementary. These six schools are staffed with 19 counselors.

The Area III Office staff consits of an area director, an assistant area director, three coordinators of instruction, ten pupil services personnel, fifteen resource teachers in all subject areas, and two media technicians. All of the area office staff have demonstrated support and enthusiasm for the Career Education Guidance Program. Specifically, the working relationships developed among the Social Studies and Career Education Resource Teachers have been most productive in working with teachers and students. Also the Area Coordinators of Instruction have been instrumental in gaining and maintaining administrative support. Throughout the year, meetings have been held regularly with the Assistant Area Director and the Central Office - based Coordinators of Guidance and Career Education. These meetings have been extremely helpful in designing strategies and procedures for implementing the model.

Preliminary ground-work for implementation of the model was begun with the 19 counselors in the six target schools in a local workshop held for counselors in August of 1974. Following the workshop, contact was made with the administrators of the six target schools by the Area III Coordinators of Instruction to set up the Step 1 preliminary meetings. The Step 1 meetings were held in all six target schools with all personnel as listed in the Model in September and October. The Step 2 meetings (preliminary planning with school counselors) were conducted in October, November, and December. (See attached chronological chart).

Following these planning meetings, implementation of the next stages of the model varied considerably. Involvement depended on the amount of commitment of the school administrators, the experience, capability and willingness of the 19 counselors to carry out the implementation, and the degree to which teachers were infusing Career Education into their classes and needed help. It was discerned that counselors were more confident and more willing to become involved with other staff members and students in career guidance when they had structured programs and materials with which to work. Therefore, much of my effort was concentrated in familiarizing counselors with group techniques such as the "Career Guidance Through Groups" (developed by the Cocational Guidance Service in Houston, Texas), the Decision Making Program (produced by the College Entrance Examination Board), values clarification procedures, communications and human relations skills, needs assessments, and in introducing other commerical materials when appropriate.

In preparation for fulfilling the above needs, I received leadership training in the Decision Making Program given by CEEB, worked with Ms. Carol Ramirez of the Houston

Vocational Guidance Service, and attended workshops at the local, state, and national levels when appropriate. I also consulted with many local and national counselor and teacher educators, various sales persons, and other knowledgeable people in the Office of Career Education in Washington, the Maryland State Department of Education, and in the Anne Arundel County School System.

Evaluation of the Career Education Guidance Program was determined by both formal and informal means. Informal conferences were held during the school year with the school administrators, counselors, teachers, appropriate memebers of the Area III Office Staff, and the Coordinators of Guidance and Career Education from the Central Office. Adjustments and revisions to the program were made when necessary and appropriate. Several segments of the formal evaluation directed by the third-party evaluator, IBEX Inc., concerned the guidance program. Results of that evaluation are contained elsewhere in this report. A formal evaluation was in January, 1975, and results of that report have been submitted. An assessment of the Career Education Guidance Program was developed and sent to the counselors in Area III at the end of this school year. (Career Education Resource Counselor Survey - copy attached). The results of that survey are discussed in the following sections of this guidance report.

III. Results and Accomplishments

The first steps in the implementations of the Counselors-Teacher Interaction Model, Steps 1 and 2, meetings with administrators and counselors, were scheduled and conducted successfully in all of the six target schools. The content of these meetings followed the outline sugpersonnel involved according to the needs and priorities which had been established in the individual schools. Step 3 meetings (student and/or parent involvement were not held in any of the schools since implementation was concentrated on fusing the existing guidance programs with the individual schools' needs in Career Education.

Formal Step 4 meetings (Department Chairpersons) were held at Arundel Senior and MacArthur Junior High Schools. These initial meetings resulted in continuing formal and informal associations with the department chairpersons. Arundel Junior High has held a department chairpersons meeting the previous school year, and another meeting was not appropriate. Step 4 does not apply to elementary schools where there are no department chairpersons.

Steps 5, 6, and 7 meetings (counselors meeting with teachers and interaction in classrooms: the most important component of the model) were held both formally and informally to varying degrees in five of the six target schools. It is unfortunate that comprehensive assessment of these important steps is so extremely difficult, and that there are no completely valid methods of measuring exactly how much students have benefited from counselor-teacher interaction, or how much teachers have benefited directly or indirectly from those associations.

At Harman Elementary, MacArthur Junior, and Arundel Senior High Schools there was a measurably high amount of involvement. At Harman, the counselor became involved with teachers and students in all grades in all phases of the county's Career Education program. Hence, the Model was implemented fully and completely in this school.

Two of MacArthur Junior High's five counselors were designated as Career Education contact counselors for their staffs and they served as resource personnel to the teachers. However, during the school year, all of the counselors became involved to some degree with Career Education materials, speakers, interest surveys, and other services as requested by individual teachers.

In Arundel Senior High, two of the seven counselors were designated as Career Education contact counselors in the fall. By the close of school in June, all of the counselors had become resources and consultants to teachers in various phases of Career Education implementation. Four counselors were highly involved in the Decision Making Program (CEEB), the Career Group Guidance Program (Texas) and several other commercial and "home made" programs affecting at least 300 students. (This is a known number; there were undoubtedly many other students involved.) The Social Studies department will implement the Texas Career Group Guidance Program with the entire student body of 3000 in the 1975-76 school year. Twenty-one teachers, six counselors, and one social studies resource teacher are already trained as facilitators in this program, and the remainder will be trained in the fall.

The counselors at Arundel Junior High and Maryland City Elementary Schools were involved with teachers and students in Career Education activities on a more informal basis as priorities permitted. At Arundel Junior High, counselors and teachers from the Social Studies and English departments received training, and implemented CEEB's Decision Making Program. The counselors there gave support to individual teachers as requested. At Maryland City, the counselor served as the leader of a Career Education committee and offered assistance to the teachers informally as needed.

There are Career Education programs and activities at Van Bokkelen Elementary School; however, the counselor there has been committed to other programs with higher priority due to the school's special population.

The above results of the Career Education Guidance program in Area III this year were based on meetings and discussions with the school and area office personnel held through out the school year, and on the Survey (copy attached) sent to the counselors in June, 1975. According to information received in the Survey, over 150 follow-up contacts, both in person and by telephone, were made between the school counselors in Area III and me. As a result of the contacts with the Career Education Counselor (Item #3), 33% conducted or co-led faculty in-service meetings, 80% served as resources to teachers in Career Education activities, 55% worked with students in the classroom in Career Education activities, 44% worked with teachers in the classroom in Career Education activities, 55% were consulted by their administrators for Career Education purposes, and 60% conducted seven or more Career Education - related small group sessions with students.

In addition to the services provided for implementation of the Model, I have served as a consultant to personnel in other areas of the county and other parts of the state. There have been many consultations with the Career Education Resource teachers in the other three areas of Anne Arundel County. I have been involved in planning Career Education activities for the Teacher-Advisor Program in the county's middle school program, and worked with individual teachers in all four areas when possible. I have conducted or co-led with other counselors twenty workshops with 450 teachers, counselors, and administrators in values clarification, decision making, and group guidance programs. (Sample agendas attached). I have also been working on a Maryland State Department Committee to develop a Career Guidance Model. Copies of this document will be released in August.

IV. Conclusions and Recommendations

Clearly counselors in Area III are involved with teachers, administrators, and students in Career Education Guidance programs. Involvement is not 100%; but total involvement implies changes in the role of the school counselor, sometimes dramatic and insightful changes. These kinds of changes are seldom quick, easy processes, and they cannot always occur in a ten month time span. It is impossible to say with statistical certainty that there have been changes in the roles of counselors in Area III this year, especially since a pretest Survey was not administered. However, I can state with confidence that changes have occurred, as evidenced from working in schools with and among the staffs. If these beginnings of change are to continue and be lasting rather than "one-shot" or superficial, then mutual trust, support, commitment, and understanding between counselors and administrators are absolutely essential. Counselors to varying degrees will need to update their techniques and skills, and to increase their resources. Area III counselors appear to be willing to do this, and I hope to be able to work through the continuing stages of change with them in the future.

Based on the information presented in this report, the Model for Counselor-Teacher Interaction has undoubtedly brought some of the expertise of counselors to teachers and ultimately to more students: its orginal goal. Step 1 of the Model has been effective in making counselors and administrators aware of the needs for change, and in helping to clarify role expectations. Step 2 meetings have been a series of on-going consultations between the school counselors and me rather than one formal meeting. These conferences have been very effective exchanges of ideas and materials for planning and implementing Career Guidance programs.

Step 3, involvement of students and parents, has not been implemented this year to a high degree. Step 3 requires involvement of students and parents in the planning stages. However, since this model requires a change in the role of the counselor, it seems advisable that counselors become more familiar with all aspects of the program before involving students and parents to a greater extent. Students and parents have, of course, been involved in career guidance in other stages and capacities, such as acting as resource persons. It is possible that Step 3 can be implemented next year at Harman Elementary, and in the other schools the following year.

Steps 4, 5, 6 and 7 of the Model, those involving actual contact, planning, and implementation of career guidance programs with teachers and students, have taken place in various forms as applicable to the needs of the individual schools. Regardless of the methods or strategies used to get there, the end result: the interaction of teachers and students in the classroom using career education programs with the school counselors as resource persons, has been accomplished in numerous instances. In reality, some of this contact was occurring before this school year, and the Career Education Guidance program became the catalyst for increasing those activities.

At this point in the Career Education Guidance program, the Model itself does not need to be revised. It can be used as is with modifications to suit the particular circumstances in the individual schools. It must be remembered that the Model presupposes that the schools are knowledgeable in and have begun implementation of the County Career Education program, and that school administrators support the program. If this stage has not been set in the schools, then counselors will

62

need to take a different approach to implementing Career Education activities with teachers as well as students. The Career Education counselor would assist them in developing this program and continue resource support as needed. A list of "Suggested Counselor Activities..." (copy attached) has been developed to stimulate counselors' preparations for a career guidance program.

The role of the counselor assigned to Career Education should remain as it has been with school counselors in Area III this year; catalyst, stimulator, demonstrator of materials with students and staff, trainer in new skills and concepts, facilitator in groups, and general resource in any other ways required by the needs of the counselors. According to the results of the Survey sent to counselors in Area III (copy attached - Item #5), building community resource lists, developing career centers, and obtaining Career Education materials were given highest priorities on the list of services needed. Other services requested were conducting in-service programs, planning career guidance programs, and conducting needs assessments. Training in classroom career guidance activities, in social communication skills, and in developing self concept were also requested by a majority of the counselors responding. Fulfilling these requests will be incorporated into the role of the Career Education Counselor, as well as attending to the other specific commitments to continuing and expanding the Career Education Guidance program in Area III in the 1975-76 school year. At Arundel Senior High, the Texas Career Group Guidance program will be extended to include the entire student body. Other Career Education programs involving counselors are expected to be implemented there. As the organizational pattern of junior high schools changes to middle schools in Anne Arundel County, counselors will become involved more intensely in the coordination of activities and training for the Teacher-Advisor Program, which is part of the middle school concept. Both MacArthur and Arundel Junior High Schools will be involved in the changes initiated by this concept. The opening of a new 4800 - student capacity school complex in Area III in September, 1975 will greatly increase counseling commitments. The normal transfers and adjustments in counseling personnel will require orientation and training. Also, for Area III, the possibility of offering a program of specific Career Education Guidance services to elementary schools without counselors is under consideration.

In the comprehensive plan for the counselor assigned to Career Education, these commitments to Area III could be maintained, and with careful planning, simultaneous implementation of the Model for Counselor-Teacher Interaction could be started in Area IV. Area IV includes Annapolis and the Southern part of Anne Arundel County.

There are two senior high schools, three junior high schools, and seven elementary schools with a total of 25 counselors. A commitment from the administrators and counselors in Area IV must be obtained before attempting to initiate implementation. Following this commitment, there would be an in-service meeting with the counselors to familiarize them with the model and with available Career Education resources. Hopefully, these preliminary steps would be scheduled in September, 1975, and actual implementation of Steps 1 and 2 could be begun in October and completed by December, 1975.

Much careful thought and deliberation has been given to the possibilities of beginning implementation of the Model in Area II in February of 1976 following the implementation in Area IV. However, I am sincerely deliberating whether one person can manage a second implementation with the care and commitment and time and energy that an in-depth task requires. Also, as I have discovered in Area III, the Career Guidance program tends to grow and mushroom. Area II is a "ripe" area, as in Area IV, in that some of the counselors there have already requested services from the resource counselor, and some have begun career guidance programs. Obviously the ideal situation would be to place a Career Education Counselor in each Area. However, the financial resources of the County are not such that it is possible in the next school year. In spite of the limitations of implementing in two new areas, plus maintaining programs in Area III, but because of the evidenced interest and implied commitment of a significant number of the counselors in Area II and IV, I am giveing very careful consideration to implementing the model in both areas in the time frame outlined above next year. The final decision will be jointly made at a later day by all concerned personnel.

Report of Implementation of Proposal for Career Education
Placement and Follow-up of Exiting Students
1974-1975

Submitted by:

Leonard Bates
Annapolis Sr.

A model for Placement and Follow-Up of all exiting students completed its first full year of implementation at Annapolis Senior High School.

The responsibilities and procedures for Placement and Follow-Up of all exiting students are:

1. Guidance counselors will continue to be responsible for placement of students in further education as they have been doing.

2. This proposal addresses itself to exiting students. It does not change any present procedures of assisting current students to obtain part time jobs.

3. The placement of cooperative work experience students and Vocational-Technical students will remain the responsibility of teacher-coordinators of work experience and Vocational-Technical teacher-coordinators.

4. The remaining exiting students comprise those who leave school before graduation plus those who are neither in vocational cooperative work experience programs nor applying for further education.

5. It is proposed that a model for Placement and Follow-Up of all exiting students be implemented at Annapolis Senior High School and shall be referred to as Placement Services.

6. This is to be added service to students who need placement and is not intended to be an assumption of responsibilities away from guidance counselors nor vocational teacher-coordinators of cooperatives programs. Cooperation with guidance and vocational programs will be a priority.

7. A Placement Specialist who is assigned to Career Education assumes responsibility for placing the remaining students. Clerical assistance will be furnished by Annapolis Senior High School, possibly by sharing the services of an aide in the guidance department. Office space and assistance will be assigned by Principal of Annapolis Senior High School.

8. It will be the responsibility of this Placement Services to maintain close contacts with prospective employers by communicating with them and calling on them at their places of business so that students will be placed where they will benefit most and contribute most in employment. It is to be understood by employers and students and school system tht this is a placement service for exiting students and not a coordinated on-the-job training program. The large number of possible students (over 1/3 of graduating class plus those leaving school before graduation), plus the lack of participation in cooperative training program by these students, limits the amount one can do for each individual.

9. Follow-Up will not include coordination of training but will be limited to data gathering of activity of former students, and use of information for placement and the needs of our school system, students and employers.

OBJECTIVES

The objectives of the proposed project are:

1. To promote the placement of all exiting students in either:
    a. a job
    b. post-secondary occupational program or
    c. a baccalaureate program

2. To increase the employment of young people.

3. To test the model of Placement and Follow-Up at Annapolis High School and determine whether to recommend or reject continuance of the program and the adding of Placement and Follow-up service to other senior high schools in the county.

4. To develop and maintain contacts with business and community which are essential to an on-going Placement and Follow-Up program.

5. To communicate information concerning career opportunities to students.

6. To assist each student in developing and practicing career decision making skills.

7. To act as liaison between career education and coordinator of guidance.

8. To promote the articulation of present efforts between Anne Arundel Community College and Public Schools as well as to establish new approaches to career education.

9. To provide students with career information.

10. To bring exiting students as job applicants and employers together for their mutual benefit.

11. To cooperate with the assist guidance personnel in helping exiting students with choices for further education to obtain placement.

12. To cooperate with teacher-coordinators of cooperative work experience programs in placement of exiting students.

PROCESS

Samples of letter and forms used in working the model are attached.

The school's usual means of communicating information to the faculty and students are employed.

Placement services to be added to the check out list for students leaving school before graduation.

Data on students and their desires for work are kept on visible card file system which are partly completed by student and finished by placement office. Applicants have a screening interview by placement at which time further information such as job preference is recorded.

Students may request an appointment with placement and be given a pass for permission by the teacher for the appointed time for interview.

Lunch hour is "open door" first come first served for student.

Office space is shared.

A career information center has been placed in the guidance department. Information on careers is located here for the use of students and faculty. Free materials such as pamphlets from companies and industry and professional associations plus other information on careers is accessible for student to read in the information center. Department of Labor information is available. A microfilm reader is used by students to read job bank orders from the Maryland State Employment Office.

A Kodak Carousel with self timer and 20" x 20" rear view screen is in the career information center giving the following information on slides:

A. General Information about job application

1. How to locate a job
2. How to apply for a job
3. How to fill out an application blank
4. What to do during a job interview
5. Human relations on the job

B. Vocational courses offered in school

The use of Placement Services by the student is entirely voluntary. The service is provided for as many students as ask for it, and in the amount they want, within the means of Placement Services.

The need for and benefit from Placement Services is evident. The need will increase if unemployment rises and a business slump occurs, then youth will have even more difficulty obtaining employment. The difficulty and successes of actually placing students depend on a number of factors including:

1. How well the model is developed and implemented
2. Cooperative efforts of all concerned
3. Support from school administration
4. Acceptance and support of business
5. Other influences such as economic conditions

DEVIATION FROM ORIGINAL PLANS

Many high school students have not had the benefits of understanding self and decision making. It has been necessary to work in this area with students.

Scheduling of visits by prospective employers and Civil Service exams has been assumed by Placement Services.

Assistance in obtaining summer jobs has been given where time allows.

More time than anticipated has been used in career counseling.

ACCOMPLISHMENTS TO DATE

The following objectives have been accomplished for the 1974-75 school year and are also objectives for 1975-76.

1. Continue Placement and Follow-Up of exiting students as a pilot project at Annapolis Senior High School. This project has not yet completed a full year at Annapolis Senior High School but is making steady progress.

   Methods: 1.1 Maintain a data system of student applicants and employers.

1.2 Have contacts within the school and visits to the employers.

1.3 Develop an effective process of career counseling, student career decision-making, placement and follow-up.

2. To promote the placement of all exiting students in either (a) a job, or (b) further education.

Methods: 2.1 Cooperate with counselors in placing students in further education.

2.2 Encourage counselors to participate in job placement of those students seeking jobs.

2.3 Cooperate with teacher-coordinators of cooperative work experience programs in placement of their exiting students.

3. To increase the employment of young people.

Methods: 3.1 Sell the advantages of hiring the young workers, on an individual basis, their abailability, aptitudes, abilities, ambitions and other qualities.

3.2 Maintain data for placement services.

4. To develop and maintain contacts with business and community which are essential to an on-going Placement and Follow-Up program.

Methods: 4.1 Continue visits and working relationship with Chamber of Commerce, employers, service clubs, government and civic groups, and state employment security office.

5. To gater and communicate information concerning career opportunities to students.

Methods: 5.1 Announcements by public address system to students.

5.2 Use guidance newsletter.

5.3 Through teachers.

5.4 Bulletin boards.

5.5 School papers.

5.6 Visit by placement specialist to calssrooms.

5.7 Job bank infromation

6. To assist each student in developing and particing career decision-making skills.

Methods: 6.1 Career counseling.

6.2 Provide teachers with materials on careers which use their subjects.

6.3 Provide students with steps of decision making or problem solving. See enclosure.

7. To act as liaison between career education and coordinator of guidance.

Methods: 7.1 Keep coordinator of guidance informed of benefits of project and any possibilities of expansion or request for permission for application of methods.

8. To provide students with career information.

Methods: 8.1 Provide mini-resource center of career information in guidance. The following information is provided:

a. Dictionary of Occupational Titles
b. Occupational Oulook Handbook
c. Files of careers and job descriptions
d. Other books on business and industrial forecasts
e. Pamphlets from industry, government and armed forces
f. College and other school information
g. Union and professional association material
h. Rear view screen, tapes and slides of careers and jobs
i. Give away material obtained free from from government, armed forces and organizations
j. State employment security information on job bank

9. To bring exiting students as job applicants and employers together for their mutual benefit.

Methods: 9.1 Keep data system of cooperating employers and students who voluntarily register for assistance.

9.2 Encourage students to register.

9.3 Try to find applicants which certain skills which employer specifies.

9.4 Try to find employment of type student prefers.

9.5 Bring the two together for job application and interviews.

9.6 Seek out many sources of information of job openings, including Maryland State Employment Security Office, visits to employers, and phone calls to friends, teachers, former students placed, ads for help wanted in newspapers and radio, armed forces recruiters.

9.7 Give job application instruction and encourage students to apply on their own for jobs. See enclosure on job interview.

10. To cooperate with the assist guidance personnel in helping exiting students with choices for education or to choose and obtain employment.

Methods: 10.1 In career counseling, encourage students to consult their guidance counselors concerning information on college, other further education, and careers information.

10.2 Obtain career information and share it with guidance counselors.

10.3 Work as a team with counselors and be useful.

11. To cooperate with teacher-coordinators of cooperative work experience programs in placement of exiting students.

Methods: 11.1 Keep teacher-coordinators informed of job openings requiring their students' skills.

11.2 Try to place former students of cooperative work experience programs who come back to placement services for assistance.

ACTIVITIES

1. Placement Services placed seventy two exiting students in full time jobs in school year 1974-75. Some students out of school one to three years asked for help and were placed. No accurate record can be kept on how many students placed

themselves with the help of advice in job application.

2. Assisted Employment Security Office in identifying and recommending students for thirty four summer jobs at Naval Ship Research and Development Center.

3. Arranged for Civil Service exam to be given at Annapolis High School. Arranged for visits by recruiters from CIA and U.S. State Department o speak to job applicants.

4. Arranged for and moderated program for Career Night at Parent-Teacher-Student Organization night.

5. Served on committee planning Summer Industry Visitation Workshop.

6. Serviced on Chamber of Commerce Jobs - Educational-Training Committee.

7. Participated as speaker and counselor at "Getting a Summer Job" day at Anne Arundel Community College. The program was organized by Anne Arundel County Recreation Department.

Three guides to help you list your job preferences.

Think of a type of work you would:

1. Enjoy doing over a long period of time

2. Pay you enough to satisfy your needs and ressonable desires.

3. Be the right person for the job. Example: Willing to do what the job demands. Capable of starting on an entry level and to progress with experience. Right attitude and aptitude.

ELEMENTARY SCHOOL TYPING PROGRAM

Submitted by:

Maxine Kirkley
Severn River Jr.

Area I

In this area, we had one new school that began the typing program this past year and one school renewed the program after dropping it.

Belle Grove Elementary

Fifth grade students participated in the typing program this year after the school had dropped the program for two years. They also sent two teachers to the workshop last fall. They did have a separate room for typing this past year which was an improvement over using the stage. Also presented some problems since they shared the room with the music classes and equipment had to be moved each time for classes.

George Cromwell Elementary

George Cromwell did not participate this past year after having the program for two years. Career Education provided the school with tables, chairs and typewriters in 1972. There were some internal problems that resulted in the program not getting underway.

Glen Burnie Park

Has been a very active participant since the program began in their school in 1973. One teacher taught all the classes and she did attend the workshop. Two other teachers from this school also attended the workshop and they can be called on to give assistance when needed. This school is very flexible in their scheduling. While the teacher had one group in typing, the other teachers had the rest of the students in Language Arts activities. It seemed to work very well for them.

We have had some problems in getting started at Glendale Elementary. We couldn't get tables for them when we needed them. When we were able to get tables, they were not satisfactory. These tables have been sent to other schools that can use them. A teacher from Glendale did attend the workshop last fall and I feel she will be very good to teach the typing at the school when ???.

Park Elementary

Park has been a very enthusiastic supporter of the typing program since we began it in 1971. They have had two teachers attend the workshop but they have moved to other schools after teaching typing one year. The teacher who taught it this past year did not attend the workshop. Park Elementary is also planning to move the typing to another room where they will have more space and are planning to buy more typewriters which will help in scheduling classes.

Point Pleasant Elementary

Point Pleasant is one of the larger elementary schools in this area. They have had at least five classes each year and one year had six. The point that disturbs me is that not one teacher from this school has ever attended the workshop. Two teachers know nothing about typing. They take the students to the typing room, turn the projector on and then sit down. These students have acquired incorrect typing habits and if some of them take typing in high school, they will never make it.

Richard Henry Lee Elementary

Richard Henry Lee has been very inflexible in their scheduling which has caused some problems when we schedule the typing film loops. I do not feel that the students get enough time on the typewriters. It is set up on a club-like basis. The new administrator coming in is an enthusiastic supporter of the typing program and there may be some changes in the next couple of years. There was one teacher from this school who attended the workshop last fall and helped with the classes.

Rippling Woods Elementary

Rippling Woods was new school this last year therefore, a new school for the typing program. The administration is behind the typing program all the way. In fact, they had typing classes for both fifth and sixth grade students. They wanted the sixth grade to have the opportunity to take before going to junior high school. One teacher who transferred from another school had attended the typing workshop two years ago. There were two or more teachers teaching the calsses who had not attended.

Woodside Elementary

Woodside does not offer typing to all fifth grade students. The students have to have parental consent to take the class. They have 18 typewriters which limits the number of students taking it at any one time. Both teachers working with the program attended the workshop two years ago.

This area increased in the number of students participating from 200 in 1971-72 to 743 in 1974-75. The number of schools from two to eight.

Area II

Elementary schools in this area have not participated in the typing program.

Typewriting was implemented at the new Severn River Junior High this past year. Six one-semester classes with a total of 146 ninth grade students participating. This was the first junior high school in the county to offer typing.

Typing was implemented primarily to interest students who were potential dropouts. To give these students some skill so if they did dropout at a later date, they would still have a "selling point" when they would seek employment. Many employers consider typing one skill that employees should have.

The typing class also served as an exploratory course for those students who were uncertain whether to take the business course in high school. The majority of these students will never take typing again but they have enough skill to type papers for reports, themes, personal letters, etc. Some of them have enough skill that they could get a part-time job while attending college.

The first semester students did not have as much time on the typewriters as the second semester students. The typewriters did not arrive until October.

Speed was not stressed although the students did take one and three minute time writings. Their grades did not depend on speed. Accuracy in typing was stressed as well as proofreading their papers.

Even though speed was not stressed as it is in high school typing classes, the following figures indicate that many of them did reach a fairly high rate for a one semester course:

First Semester

Below 20	20-24	25-29	30-34	35-39	40-over
19	20	16	9	5	2

Second Semester

Below 20	20-24	25-29	30-34	35-39	40-over
5	23	19	14	6	1

There was a few students who did not have a score listed because they made too many errors. Al least 50% of those listed typed without errors on the one-minute writings, 29% with one error, 21% with two errors.

Many of those who typed below 20 words per minute were very accurate typists. Several of these students would be able to do only a straight copy, repetitious, clerical typing jobs but there are many jobs requiring that kind of typing.

This coming year Severn River Junior High will have ten semester courses in typing with approximately 300 students participating.

Area III

Brock Bridge Elementary

Brock Bridge has the typewriters but we have been unable to get the tables for them. (See end of report about tables.) No one attended the typing workshop from this school.

Crofton Woods Elementary

Crofton Woods has tyewriters and tables and should have been able to begin the typing but did not. Three or four meetings were held with the fifth grade teachers and the vice-principal but the classes did get started. Perhaps next year if I can teach the first two or three lessons, the teacher would be able to follow through with the rest of the lessons. No one from this school has attended the workshop.

Manor View Elementary

Manor View had two teachers attend the typing workshop last fall. This was the first year for typing in this school and they were not able to spend as much time as they would have liked with the classes. But, they were able to take all the 165 fifth grade students through the basics. They plan to work with these same students at the beginning of next year before taking the fifth grade students through the course.

Maryland City Elementary

Maryland City began their typing class in late spring. The teacher, who attended the workshop last fall, and the principal decided to go with a small group for this first year. The group was a slow reading class of 17 students. The class repeated several lessons because they were not always able to keep in time with the film loops. When on a second or third try, the students were able to do it there was a great feeling of achievement. The class did complete all of the film loops before the end of school. Plan to involve more students next year.

Millersville Elementary

Millersville had a teacher in the typing workshop in 1973 but she has not been available to teach typing. The first three lessons were taught by me this past year and than a first year teacher took over and taught the rest of the lessons. The administrator is a very strong supporter of the typing program and she hopes to have a room in the main building for the typing this coming year. If this can be done, the typewriters would be available for the students to use at all times.

Odenton Elementary

Odenton had all the equipment necessary to begin the typing program but before the classes began, they had some problems with vandalism and were not able to get a program started. There has been no one from this school attend the workshop.

Severn Elementary

Severn has strong support form the administrator for the typing program. The teacher has not attended the workshop but she does know quite a lot about typing and has worked very hard with the group. The school seems to be very flexible in the scheduling of these classes.

This area has increased in the number of students in the program from 125 in 1973-74 to 348 this past year. The number of schools from one to four. Jessup Elementary has planed to begin next year and is also sending one teacher to the workshop this coming fall.

Area IV

Central Avenue Elementary

Central was the only school in this area to begin a typing program this past year. The program was not started until late in the school year. The teacher worked with a small group because of the time element. The administrator wants to get started earlier next year so more students can be involved.

The typewriters at Central were in a small area off to one side of the stage which was not a desirable situation. Whenever the stage was being used, typing instruction had to be postponed. Administrator has plans to block off a small area for next year if she can get permission to do so.

Next year there will be two or three more schools in this area who plan to implement the typing program.

PROBLEMS

Our main problem now is getting desks for the schools who want the typing program. We use the old wood desks which are in the warehouse, but there are some minor changes that have to be made before we can use them as typing desks. For example: the shelf must be cut out, the legs are cut down to 21, 22, 23, 25 inches in height, and a plywood top is placed on top of the desks which extends over the right edge. Maintenance department does not have the facilities to do the work. Lincoln Center was doing them for us but they refuse to do anymore. If the schools can get some group to do the work on the tables, we can furnish the materials.

Another problem of great concern to me is to get these teachers to attend the workshop so that they will know what to look for when the students are typing and how to help them. The students should not develop bad habits now while learning to type.

RESULTS AND ACCOMPLISHMENTS

1. Four new project schools participated in the elementary language arts typing program. In addition, one school revewed the typing program after dropping it for a year.

2. In one area the number of students participating increased from 200 in 71-72 to 743 in 74-75. In another area the number increased from 125 to 348 in one year. A total of 1105 fifth grade students participated in the typing program during 74-75.

3. Typewriting was implemented at the Junior High School level for ninth grade students. Six one-semester classes for a total of 146 students participating.

4. A credit workshop was held for interested elementary personnel to acquaint them with the language arts typing program.

PROCESS GOAL III OBJECTIVES

1. At least three new elementary project schools will participate in the elementary language arts typing program. (5th grade)

2. At least ten one-semester classes of typing for ninth grade students with a minimum of 300 students participating.

3. A credit workshop will be conducted by a qualified person to train volunteer teachers in the use of the language arts typing program.

INFUSION OF CAREER EDUCATION WITH SOCIAL STUDIES

December 6, 1974

ANNE ARUNDEL COUNTY PUBLIC SCHOOLS
ANNAPOLIS, MARYLAND 21401

COMMITTEE

Mr. Robert Jarvis	Career Education
Mr. Gene Polm	Career Education
Mr. Robert S. Smith	Career Education
Mrs. Brenda Corcoran	Social Studies
Mr. Donald Kyle	Social Studies
Mr. Donald Zimmerman	Social Studies
Dr. William H. Shannon	Social Studies
Dr. Dennis G. Younger	Curriculum

The committee:

1) designed a model to show how the structures of the social studies and career education programs compare.

2) coded the behavioral objectives of the career program and placed them within the proper social studies concept cell at all four levels of the social studies framework. For the convenience of the teacher, this work is recorded for each grade at K-8. At level four (grades 9-12) the alignment of the two programs is provided on the social studies framework.

COMPARISON OF SOCIAL STUDIES AND CAREER EDUCATION STRUCTURES

Social Studies	Career Education
FRAMEWORK Paired Concepts (forty-five conceptual statements)	**FRAMEWORK** Concept Area (Career, Self, Society, Economics, Technology)
PERFORMANCE OBJECTIVES These objectives have been identified for the teacher in the printed curriculum guide.	**PERFORMANCE OBJECTIVES** The career curriculum is not written with performance level objectives.
OPERATIONAL OBJECTIVES These objectives are written by the classroom teacher or taken from sample units.	**BEHAVIORAL OBJECTIVES** The career curriculum guide identifies these objectives for the teacher. These objectives are included as operational objectives in the social studies unit.
ACTIVITIES Decided upon by each teacher to carry out the intent of the operational objective.	**ACTIVITIES** Decided upon by each teacher to carry out the intent of the career objective.

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

KINDERGARTEN*

UNIT I:	LOOKING AT MYSELF AND OTHERS	
5C	INDIVIDUAL DIFFERENCES/STABILITY	The student will recognize and describe differences and similarities observed in other people.
	CAREER RELATED OBJECTIVE C-3	The student will compare and contrast the work and play in the school, home, and community.
9C	HABITAT/STABILITY	The student will describe the similarities in dealing with the environment which exist among people living in different environments.
	CAREER RELATED OBJECTIVE E-5	The student will identify and discuss different kinds of work which are related to various geographical areas.
5D	INDIVIDUAL DIFFERENCES/VALUING	The student will explain why he likes some things and dislikes others and note the individual differences of opinion within a group.
	CAREER RELATED OBJECTIVE S-1	The student will identify ways in which he is a distinct individual.
	CAREER RELATED OBJECTIVE S-4	The student will give examples of things he likes to do and things he does well.
UNIT II:	INTERACTING WITH MY FAMILY AND FRIENDS	
2B	CONFLICT/INTERACTION	The student will determine areas of disagreement through interaction with others.
	CAREER RELATED OBJECTIVE S-12	The student will demonstrate that his perception of people may differ from the perceptions of others.
4A	MORALITY/CHANGE	The student will identify where he gets ideas of acceptable behavior and tell whether people have caused him to change these ideas.

---

* To replace pages three (3) and four (4) of Publication Number 2697/103, Printed January - 1975.

3A	**INTERDEPENDENCE/CHANGE**	The student will demonstrate how a change in the behavior of one person may affect the behavior of other people.
UNIT III:	**HOW RULES HELP US**	
1A	**POWER/CHANGE**	The student will explain how a specific group such as his family is organized in terms of power and compare this to the group's past organization.
8C	**INSTITUTIONS/STABILITY**	The student will determine how and why controls are set up by various institutions within his experience.
4E	**MORALITY/UTILIZATION**	The student will discuss the rules he observes concerning the use of resources.
	CAREER RELATED OBJECTIVE Y-5	The student will discuss rules which protect people who produce and use goods and services.
6E	**DECISION-MAKING/UTILIZATION**	The student will explain experiences in which he has had to decide how his resources were to be used.
	CAREER RELATED OBJECTIVE C-4	The student will recall the many various jobs that he has performed over a period of time.

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

FIRST GRADE

UNIT I:	WE ARE ALIKE, WE ARE DIFFERENT	
5A	INDIVIDUAL DIFFERENCES/CHANGE	The student will indicate changes that may occur in individual differences at various times.
	CAREER RELATED OBJECTIVE S-6	The student will demonstrate that he perceives things differently from other people.
	CAREER RELATED OBJECTIVE S-7	The student will demonstrate that he perceives things differently from time to time.
9A	HABITAT/CHANGE	The student will describe how he has adapted to natural and man-made changes in his environment.
	CAREER RELATED OBJECTIVE T-3	The student will identify and discuss the different ways people use tools and materials in the accomplishment of tasks and the production of products.
4C	MORALITY/STABILITY	The student will discuss the necessity for general unwritten guidelines related to behavior.
	CAREER RELATED OBJECTIVE S-5	The student will identify attitudes and behaviors which help him and others to perform a task.
	CAREER RELATED OBJECTIVE S-11	The student will identify and discuss the attitudes and behaviors which enable him to work and play cooperatively.
9D	HABITAT/VALUING	The student will name and explain why certain aspects of the environment are prized by people around him.
	CAREER RELATED OBJECTIVE C-5	The student will name and discuss hobbies and interests.
5E	INDIVIDUAL DIFFERENCES/UTILIZATION	The student will identify his needs as an individual and will compare the different ways in which he as an individual uses resources to meet his needs.

	CAREER RELATED OBJECTIVE E-3	The student will identify his basic economic needs a wants and discuss the ways these are provided
UNIT II:	COOPERATING WITH OUR NEIGHBORS	
3C	INTERDEPENDENCE/STABILITY	The student will discuss the benefits of having the sa people continually provide for his needs.
3D	INTERDEPENDENCE/VALUING	The student will consider selected situations and discuss his feelings about depending upon other peop
	CAREER RELATED OBJECTIVE Y-3	The student will identify those needs of society whic various individuals fulfill.
	CAREER RELATED OBJECTIVE Y-4	The student will identify benefits and rewards he re- ceives for his work and from the work of others.
7E	TECHNOLOGY/UTILIZATION	The student will identify some tools of technology a discuss the purpose for which these tools were ma
	CAREER RELATED OBJECTIVE C-10	The student will identify the skills, tools, and mate needed to perform a job.
9E	HABITAT/UTILIZATION	The student will select several examples of local re sources that he uses regularly and explain how thes resources provide for his basic needs.
3B	INTERDEPENDENCE/INTERACTION	The student will identify and explain the ways in wh interacting with other people helps him to meet his needs.
	CAREER RELATED OBJECTIVE Y-1	The student will identify people who are working to- gether toward a common goal and explain how the w of each person contributes to the achievement of tha goal.
3E	INTERDEPENDENCE/UTILIZATION	The student will recognize and describe how people depend on one another for goods and services.
	CAREER RELATED OBJECTIVE C-6	The student will identify, within his immediate wor several jobs that are related and can be grouped in job families.

	9B HABITAT/INTERACTION	The student will explain how specific individuals interact in attempting to control some part of the student's own environment.
	CAREER RELATED OBJECTIVE C-7	The student will identify and describe specific tasks within job families familiar to him.
UNIT III:	WINNERS, LOSERS, AND REFEREES	
	1B POWER/INTERACTION	The student will explain what factors or attributes might give one individual power over another.
	2C CONFLICT/STABILITY	The student will recall and discuss the feelings he has when involved in a conflict and explain how and why people often act to avoid conflict.
	2D CONFLICT/VALUING	The student will discuss approved ways in which conflicts involving himself or others can be settled.
	8B INSTITUTIONS/INTERACTION	The student will illustrate the interaction of institutional roles that various people play in a given situation.
	CAREER RELATED OBJECTIVE C-2	The student will identify the different kinds of work people do in the home, school, and community.

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

SECOND GRADE

UNIT I: VALUES IN A CHANGING WORLD

2A	CONFLICT/CHANGE	The student will identify some conflicts that have occurred as changes were made.
	CAREER RELATED OBJECTIVE T-5	The student will examine the implication for man's work and leisure time when confronted with specific examples of with-drawing technology from his life.
8A	INSTITUTIONS/CHANGE	The student will identify changes in a specific institution and explain how these changes affect the individuals involved.
8D	INSTITUTIONS/VALUING	The student will explain what values are transmitted by familiar institutions.
	CAREER RELATED OBJECTIVE Y-2	The student will identify and discuss how customs, traditions, and attitudes of society relate to work.
4D	MORALITY/VALUING	The student will identify some of his values that are also values held by his parents and others.
	CAREER RELATED OBJECTIVE S-8	The student will indicate things that he feels are important to him and others in his immediate world and discuss why he thinks these things are important.
4B	MORALITY/INTERACTION	The student will describe the clash of morals in a hypothetical situation.

UNIT II: LEARNING TO MAKE DECISIONS

6A	DECISION-MAKING/CHANGE	The student will tell about some changes which have occurred in his life and discuss how decisions were made to cause or deal with these changes.
	CAREER RELATED OBJECTIVE S-10	The student will discuss what he learns about himself as a result of engaging in new tasks

6B DECISION-MAKING/INTERACTION	The student will identify those interactions that play a major and a minor role in the decision-making process.
CAREER RELATED OBJECTIVE S-9	The student will identify ways he and others make contributions in work and play activities.
6C DECISION-MAKING/STABILITY	The student will give examples of how groups make decisions and explain how consistency in those processes affects the stability of the group.
CAREER RELATED OBJECTIVE E-4	The student will discuss how changing demands for goods and services affect job opportunities.
6D DECISION-MAKING/VALUING	The student will explain how his choosing one alternative over another is a direct result of the values he holds.
CAREER RELATED OBJECTIVE S-2	The student will identify and discuss the reasons why some work activities are personally satisfying to him.
5B INDIVIDUAL DIFFERENCES/INTERACTION	The student will indicate how an individual's behavior is influenced through observation of and interaction among other people.
CAREER RELATED OBJECTIVE C-1	The student will participate in activities reflecting his identifications with worker roles.
UNIT III: USES AND ABUSE OF POWER	
1C POWER/STABILITY	The student will explain how the use of power is controlled to maintain stability.
1D POWER/VALUING	The student will examine situations in which rules play an important part and discuss how differences in values cause differences in how these rules are made and enforced.
1E POWER/UTILIZATION	The student will demonstrate how money, strengths, intelligence and position give a person the power to control more resources than another person.
2E CONFLICT/UTILIZATION	The student will describe from his own experience a conflict arising over the use of resources and discuss why conflicts of this type occur.

93

CAREER RELATED OBJECTIVE T-7	The student will observe and discuss how technology which helps man can also cause problems if not properly used.
UNIT IV: PEOPLE AND MACHINES	
7A TECHNOLOGY/CHANGE	The student will identify some technological advances that have caused people to change.
CAREER RELATED OBJECTIVE T-4	The student will identify and discuss things that change naturally or by man's intervention.
7B TECHNOLOGY/INTERACTION	The student will tell about technological advances that have been given to or borrowed from other societies past or present.
CAREER RELATED OBJECTIVE T-6	The student will compare and contrast family and community living of the past and present in terms of the development of tools, materials, and processes.
7C TECHNOLOGY/STABILITY	The student will identify man's basic needs giving examples of how technology is used to satisfy each of them.
CAREER RELATED OBJECTIVE E-1	The student will discuss why and how man must work to produce goods and services.
7D TECHNOLOGY/VALUING	The student will give examples of several products of technology to which he assigns importance or appreciation and tell why.
8E INSTITUTIONS/UTILIZATION	The student will identify what resources are used by institutions and state for what purposes they are used.
CAREER RELATED OBJECTIVE E-2	The student will discuss how people balance their needs and wants with available resources.

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

GRADE THREE

UNIT I:	THE FORCES OF STABILITY	
	1C POWER/STABILITY	The student will describe the role of government in controlling power to maintain stability.
	CAREER RELATED OBJECTIVE Y-5	The student will investigate the conditions which lead to protective legislation for producers and consumers and trace the resulting laws.
	3C INTERDEPENDENCE/STABILITY	The student will look at human relationships in different societies and explain how role expectations enable people to help others.
	CAREER RELATED OBJECTIVE C-10	The student will illustrate interdependency between various jobs within occupational areas.
	4C MORALITY/STABILITY	The student will evaluate the standards of morality which lead to stability as reflected in a given community.
	9C HABITAT/STABILITY	The student will trace in different cultures ways of dealing with the environment which have been retained for at least several generations.
	CAREER RELATED OBJECTIVE E-5	The student will investigate how different people have provided for their basic economic needs and wants.
UNIT II:	THE WORLD OF TECHNOLOGY	
	1E POWER/UTILIZATION	The student will explain how economic power can enable individuals and groups to control the utilization of resources.
	CAREER RELATED OBJECTIVE Y-4	The student will indentify and discuss the ways societal groups reward their members for their work.
	6E DECISION-MAKING/UTILIZATION	The student will examine decision-making in various population settings and analyze the effect of these decisions upon the utilization of resources.

95

96

	CAREER RELATED OBJECTIVE E-1	The student will examine how the work of many men has made possible a continuing increase in goods and services produced in our country.
7E	TECHNOLOGY/UTILIZATION	The student will analyze ways man can deal with his total environment at different levels of technological advancement.
	CAREER RELATED OBJECTIVES S-12	The student will analyze how he and others have helped in the completion of various tasks.
	CAREER RELATED OBJECTIVE T-7	The student will construct imaginary accomplishments in technology that he would like to see occur and assess their implications for man's work and leisure time.
8E	INSTITUTIONS/UTILIZATION	The student will investigate institutions in various cultures and analyze how they use resources.
	CAREER RELATED OBJECTIVE C-13	The student will analyze the relationship between the skills, tools, and materials used in doing different jobs.
9E	HABITAT/UTILIZATION	The student will evaluate resources in his environment as to how each is used and decide whether better use could be made of any of these resources.
	CAREER RELATED OBJECTIVE T-9	The student will analyze ways man can enhance his total environment if technology is used to his advantage.
UNIT III:	RESOLVING CONFLICTS	
1D	POWER/VALUING	The student will demonstrate how different values in various cultures cause different uses of power.
2D	CONFLICT/VALUING	The student will examine how societal values affect the resolution of conflict in different societies.
	CAREER RELATED OBJECTIVE S-10	The student will clarify his values by participating in activities which bring values into conflict.
4D	MORALITY/VALUING	The student will examine moral standards in selected cultures and discuss how these standards of morality differ from his own present culture.

	CAREER RELATED OBJECTIVE S-11	The student will identify his emerging values and compare these beliefs with the beliefs held by most people.
UNIT-IV:	**WHAT TO DO WITH A NATION'S RESOURCES**	
9D	**HABITAT/VALUING**	The student will give examples from differing cultures to show how various aspects of the environment are prized by societies with different value systems.
	CAREER RELATED OBJECTIVE S-8	The student will identify the persons and things that constitute his environment and affect the way he views work.
2E	**CONFLICT/UTILIZATION**	The student will analyze conflicts arising over the use of resources to determine factors which may be common in the conflicts over resources.
	CAREER RELATED OBJECTIVE E-4	The student will examine plans and choices he and others must make to use available resources effectively, both as consumers and as producers.
3E	**INTERDEPENDENCE/UTILIZATION**	The student will examine the limitations and location of resources and explain how societies depend upon trade for utilization of resources.
	CAREER RELATED OBJECTIVE C-2	The student will cite examples of kinds of work people do outside his immediate experience that directly affect his life.

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

GRADE FOUR

UNIT I:	THE EFFECT OF INTERACTION ON GROUPS	
3B	INTERDEPENDENCE/INTERACTION	The student will demonstrate how people in different settings provide psychological satisfaction for each other by interacting.
	CAREER RELATED OBJECTIVE S-6	The student will demonstrate behaviors which indicate positive attitudes toward task performance.
8B	INSTITUTIONS/INTERACTION	The student will describe the ways interaction is influenced by the customs and traditions of an institution.
	CAREER RELATED OBJECTIVE E-3	The student will compare job opportunities today with those of the past in terms of the economic growth of our country.
3D	INTERDEPENDENCE/VALUING	The student will examine selected societies and identify the values that foster or hinder interdependence within the societies.
	CAREER RELATED OBJECTIVE Y-1	The student will discuss the interaction and interdependency of workers of societal groups and determine how their work contributes to the achievement of the goals of the group.
7D	TECHNOLOGY/VALUING	The student will discuss examples of societies that have accepted or rejected technological advancements because of their value system.
	CAREER RELATED OBJECTIVE T-8	The student will trace and analyze the development of technology in one or more broad areas.
8D	INSTITUTIONS/VALUING	The student will examine values reflected in specific institutions.
	CAREER RELATED OBJECTIVE C-9	The student will discuss different kinds of preparation and performance necessary for various levels within an occupational area.

UNIT II:	CULTURES AND SUBCULTURES	
	2B CONFLICT/INTERACTION	The student will study examples of interacting societal groups and identify and evaluate the major areas of disagreement.
	4A MORALITY/CHANGE	The student will select and explain examples of one individual or group exerting pressure upon another to change their moral standards.
	6B DECISION-MAKING/INTERACTION	The student will identify the qualities that are characteristic of leaders within societal groups and give examples of leaders who have strongly influenced decision-making within their society.
UNIT III:	SEEKING TO SATISFY THE WORLD'S NEEDS	
	2C CONFLICT/STABILITY	The student will examine examples of conflict and the part that the need and desire for stability played in the resolution of these conflicts.
	CAREER RELATED OBJECTIVE S-15	The student will identify and discuss those attitudes and behaviors toward others which help him maintain a good working relationship.
	7C TECHNOLOGY/STABILITY	The student will compare different ways man has used technology to meet his common needs.
	CAREER RELATED OBJECTIVE T-3	The student will compare and contrast technology used by various cultures to satisfy needs and desires.
	8C INSTITUTIONS/STABILITY	The student will compare and contrast institutional controls of other cultures with those of his own culture.
	CAREER RELATED OBJECTIVE E-2	The student will compare and contrast the economic incentives of our system with those of various cultures.
UNIT IV:	INFLUENCES ON SOCIAL BEHAVIOR	
	4B MORALITY/INTERACTION	The student will discuss clashes of moral standards caused by contact with different people in his own experience.
	4E MORALITY/UTILIZATION	The student will examine the rules he had been taught about the use of resources and will evaluate the extent to which he agrees with them.

CAREER RELATED OBJECTIVES S-13	The student will draw conclusions about self after performing tasks which are increasingly challenging and compatible with his development.
CAREER RELATED OBJECTIVE S-14	The student will discuss the processes required to complete a task and compare and contrast the ones he prefers to do.

100

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

GRADE FIVE

UNIT I:	DECISIONS HOW AND WHY?	
	6A DECISION-MAKING/CHANGE	The student will look at changes to evaluate the part different decision-making processes play in making and dealing with these changes.
	CAREER RELATED OBJECTIVE C-4	The student will trace the vocational history of a real or imaginary individual with emphasis on the variety of jobs held.
	6C DECISION-MAKING/STABILITY	The student will explain how consistency in the decision-making process makes people more comfortable and secure.
	CAREER RELATED OBJECTIVE S-2	The student will identify and discuss how an individual may obtain personal satisfaction from his occupation.
	6D DECISION-MAKING/VALUING	The student given a situation requiring a decision will explain how the decision making process as well as the decision made was influenced by the values of individuals.
	CAREER RELATED OBJECTIVE S-9	The student will determine how his values affect his attitude and performance in work situations.
UNIT II:	WHAT MAKES MAN DIFFERENT	
	5A INDIVIDUAL DIFFERENCES/CHANGE	The student will explain why and how individual differences cause in interests and behavior.
	CAREER RELATED OBJECTIVE S-1	The student will assess his strengths and limitations in terms of the degree to which he can exercise control over them.
	CAREER RELATED OBJECTIVE S-3	The student will relate his interests and abilities to specific occupational roles.
	5B INDIVIDUAL DIFFERENCES/INTERACTION	The student will relate how the social environment in which a person is reared and lives has a profound effect on the personal growth and development of every individual.

CAREER RELATED OBJECTIVES C-6	The student will demonstrate that hobbies and interests combine elements of both work and play.
CAREER RELATED OBJECTIVE C-7	The student will provide examples of hobbies that may develop from interests.
5C INDIVIDUAL DIFFERENCES/STABILITY	The student will explain examples in which individuals differ but at the same time possess certain commonalities that serve as stabilizing factors.
CAREER RELATED OBJECTIVE C-11	The student will analyze various work activities in terms of the processes, skills, and concepts derived from basic education necessary to their accomplishment.
5D INDIVIDUAL DIFFERENCES/VALUING	The student will compare diverse experiences which led to development of differences in opinion.
CAREER RELATED OBJECTIVE S-4	The student will assess the relationship between his developing interests and his abilities.
CAREER RELATED OBJECTIVE S-5	The student will analyze his attitudes and behaviors as they affect his performance in specific tasks.
5E INDIVIDUAL DIFFERENCES/UTILIZATION	The student will describe the ways in which the same or similar resources can be used by individuals to meet different needs.
CAREER RELATED OBJECTIVES T-1	The student will make his creative ideas materialize through the use of technology and resources.
CAREER RELATED OBJECTIVE C-14	The student will support by example ways in which general attitudinal, intellectual, and manual skills used in various occupational areas are transferable in the accomplishment of a variety of jobs.

UNIT III: DEALING WITH CHANGE

1A POWER/CHANGE	The student will examine changes in a society and evaluate the effect of the changes on the power held by individuals, groups and institutions.
CAREER RELATED OBJECTIVE Y-2	The student will compare and contrast changing customs, traditions, and attitudes as they affect jobs in various societies.

102

	2A **CONFLICT/CHANGE**	The student will analyze conflicts and describe the changes that caused the conflict.
	3A **INTERDEPENDENCE/CHANGE**	The student will cite and explain examples of different cultures of how a change in one part of the culture has effected changes in the other parts of the culture.
	CAREER RELATED OBJECTIVE E-6	The student will investigate economic conditions which affect the number and variety of jobs available.
	7A **TECHNOLOGY/CHANGE**	The student will examine and describe the effects on ways of living brought about by technological changes.
	CAREER RELATED OBJECTIVE T-5	Students will compare and contrast inventions and discoveries which have changed man's work.
	CAREER RELATED OBJECTIVE T-6	Students will identify and discuss jobs that have appeared as a result of technological developments.
	8A **INSTITUTIONS/CHANGE**	The student will state what conditions brought about changes in an institution and identify other changes that resulted.
	CAREER RELATED OBJECTIVE Y-3	The student will compare and contrast the changing needs of society that affect job opportunities.
	9A **HABITAT/CHANGE**	The student will explain how environmental changes have brought about changes in a variety of cultures and how some cultures have made changes in environments.
	CAREER RELATED OBJECTIVE E-7	The student will identify geographical factors, i.e., climate, topography, resource, location, etc., and discuss how they affect work.
UNIT IV:	**DEPENDING ON OTHERS**	
	1B **POWER/INTERACTION**	The student will demonstrate how power affects the way people act toward each other.
	7B **TECHNOLOGY/INTERACTION**	The student will give examples which illustrate how people of a culture organize themselves to use their level of technology.

CAREER RELATED OBJECTIVE C-8	The student will classify workers into occupational areas and characterize them as producing goods or services.
9B HABITAT/INTERACTION	The student will investigate a number of attempts man has made to control his environment and explain the necessity of interaction in each of these attempts.
CAREER RELATED OBJECTIVE S-7	The student will compare and contrast his interpretation of work environments of specific jobs with the way others interpret these environments.

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

SIXTH GRADE

UNIT I: ADAPTATION AND CHANGE

2A CONFLICT/CHANGE	The student will select examples of changes and show how they affect individuals.
CAREER RELATED OBJECTIVE S-7	The student will analyse the changes which have taken place in his value system as he moves toward maturity.
3A INTERDEPENDENCE/CHANGE	The student will identify changes made in his environment and evaluate how these changes have affected people not originally involved in the changes.
CAREER RELATED OBJECTIVE C-2	The student will identify kinds of work people do which have only marginal effects on his life.
5A INDIVIDUAL DIFFERENCES/CHANGE	The student will explain how growth and learning develop at various rates because of individual psychological and physiological differences.
CAREER RELATED OBJECTIVE C-7	The student will analyze the skills and processes related to various hobbies and interests which may influence career choice.
CAREER RELATED OBJECTIVE C-12	The student will evaluate his level of proficiency in basic learnings.
9A HABITAT/CHANGE	The student will examine changes which an individual or group initiates and analyse effects on the environment.
CAREER RELATED OBJECTIVE S-10	The student will explore the possible ways in which his contribution to the world of work may be most effective.
CAREER RELATED OBJECTIVE S-11	The student will identify how others contribute to the world of work.

UNIT II: **SELF REALIZATION THROUGH INTERACTION**

1B POWER/INTERACTION	The student will evaluate selected examples of interaction and show how the relative power of individuals and groups involved affected the interaction.
CAREER RELATED OBJECTIVE Y-3	The student will analyze how societal needs create a demand for workers in various occupational areas.
3B INTERDEPENDENCE/INTERACTION	The student will identify man's psychological needs and tell how different types of interaction affect the fulfillment of these needs.
CAREER RELATED OBJECTIVE C-3	The student will demonstrate kinds of work that involve working with people, working with ideas, and working with things.
4B MORALITY/INTERACTION	The student will analyze actual examples of the interaction of individuals and/or groups to explain how differing moral standards affect interaction and how differing moral standards are brought out in interaction.
CAREER RELATED OBJECTIVE S-9	The student will analyze his values in terms of how they relate to personal work behavior, work situations, and occupations.
5B INDIVIDUAL DIFFERENCES/INTERACTION	The student will demonstrate how realization of self is created and modified by contact with others.
CAREER RELATED OBJECTIVE S-1	The student will identify and evaluate his self characteristics which will help him in terms of the occupation he thinks he may wish to pursue.
CAREER RELATED OBJECTIVE S-2	The student will analyze how a positive self concept is reinforced through satisfaction with his work and/or from the value others place upon his work.
4D MORALITY/VALUING	The student will assess his own standards of morality and trace their origin.
CAREER RELATED OBJECTIVE S-8	The student will give examples of significant values inherent in various occupational areas.

5D **INDIVIDUAL DIFFERENCES/VALUING**	The student will clarify and contrast his stand on a value position with the stand taken by others, taking into account the differences in his experience and those of his classmates.
CAREER RELATED OBJECTIVE C-5	The student will explore a wide range of careers as they relate his interest and abilities.
CAREER RELATED OBJECTIVE C-6	The student will cite the advantages and disadvantages of a variety of careers in terms of his interests and abilities.
6B **DECISION-MAKING/INTERACTION**	The student will give examples to illustrate that the rights of the individual and/or groups to participate in decision-making processes varies at different times and in different situations.
CAREER RELATED OBJECTIVE C-13	The student will identify and select the school subject which contain the specific knowledge required for his tentative vocational choice.
6D **DECISION-MAKING/VALUING**	The student will analyze individual or group decisions in terms of how the values of the individuals involved affected the decision-making process and the decisions.
CAREER RELATED OBJECTIVE S-3	The student will analyze his abilities and interests in terms of occupational areas he may wish to enter.
UNIT III: **PATTERNS OF NECESSITY**	
3C **INTERDEPENDENCE/STABILITY**	The student will analyze howthe predictability of human behavior within a society helps people to satisfy one another's needs
CAREER RELATED OBJECTIVE S-12	The student will assess his self characteristics in terms of various occupations.
5C **INDIVIDUAL DIFFERENCES/STABILITY**	The student will illustrate the fact that in different cultures individuals are exposed to behavioral guides which are accepted or rejected in varying degrees by each individual.
CAREER RELATED S-6	The student will analyze the working environment of various occupations and evaluate his attitudes toward these work environments.

5E **INDIVIDUAL DIFFERENCES/UTILIZATION**	The student will evaluate the use of resources in terms of opposing needs and wants among individuals and in the individual himself.
CAREER RELATED OBJECTIVE C-8	The student will evaluate the economic rewards obtainable through the pursuit of hobbies or interests.
CAREER RELATED OBJECTIVE E-2	The student will explore the economic incentive offered by various occupational areas.
7C **TECHNOLOGY/STABILITY**	The student will demonstrate that man's technology at all levels is focused on the problem of satisfying needs.
CAREER RELATED OBJECTIVE T-4	The student will use the technologies of several broad occupational areas in a simulated or an actual work situation, relating them to the satisfaction of man's needs and desires.

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

SEVENTH GRADE

UNIT I: ADAPTATION AND CHANGE

7D	TECHNOLOGY/VALUING	The student will compare and contrast the ways technology is employed by various cultures with contrasting value systems.
	CAREER RELATED OBJECTIVE T-3	The student will explore the technology of various occupations and evaluate the benefits which have accrued to man.
7E	TECHNOLOGY/UTILIZATION	The student will analyze how technology can be used to bring about productive changes in environment.
	CAREER RELATED OBJECTIVE T-1	The student will research and demonstrate how man uses resources and technology creatively in his work.
	CAREER RELATED OBJECTIVE T-2	The student will analyze how technology is used creatively to develop various products from natural resources.
9B	HABITAT/INTERACTION	The student will select environmental problems and use examples from different settings to describe how attempts to solve these problems require group action.
	CAREER RELATED OBJECTIVE E-7	The student will investigate the geographical factors that affect various occupational areas.
9C	HABITAT/STABILITY	The student will contrast the degree of stability in situations where familiar methods of dealing with the environment are widely used and situations in which unfamiliar methods are frequently being introduced.
	CAREER RELATED OBJECTIVE T-8	The student will assess the degree to which the technology of various occupational areas is being used to the advantage of mankind.
9D	HABITAT/VALUING	The student will draw comparisons from either historical periods or environmental areas to prove how value systems cause certain environmental aspects to be prized.

	CAREER RELATED OBJECTIVE E-6	The student will identify economic trends, both past and present, and investigate their effect on job opportunities in broad occupational areas.
9E	**HABITAT/UTILIZATION**	The student will select several environmental areas and demonstrate how the differences in environment cause difference in the methods people use to satisfy their basic needs.
	CAREER RELATED OBJECTIVE C-15	The student will, after exploring several occupational areas, demonstrate a number of the basic skills needed in the performance of certain jobs.
	CAREER RELATED OBJECTIVE C-16	The student will determine the skills needed for a variety of occupations.
UNIT II:	**INTERDEPENDENCE OF PEOPLE**	
2E	**CONFLICT/UTILIZATION**	The student will analyze why there are conflicts over the use of resources and how states of the world deal with the conflicts.
3D	**INTERDEPENDENCE/VALUING**	The student will compare and contrast open and closed societies and explain how their value systems affect interdependence.
	CAREER RELATED OBJECTIVE Y-1	The student will differentiate between broad occupational areas in terms of the contribution and importance of these areas to our society.
3E	**INTERDEPENDENCE/UTILIZATION**	The student will analyze how the comparative advantage that nations have in terms of resources can be used to bring about efficient distribution and use of resources.
	CAREER RELATED OBJECTIVE E-1	The student will discuss and generalize that work in various occupational areas contributes to the nation's wealth which can be measured in terms of goods and services produced annually.
5B	**INDIVIDUAL DIFFERENCES/INTERACTION**	The student will demonstrate how realization of self is created and modified by contact with others.
	CAREER RELATED OBJECTIVE S-1	The student will identify and evaluate his self characteristics which will help him in terms of the occupation he thinks he may wish to pursue.

111

	CAREER RELATED OBJECTIVE S-2	The student will analyse how a positive self concept is reinfo through satisfaction with his work and/or from the value othe place upon his work.
6E	**DECISION-MAKING/UTILIZATION**	The student will determine differences in criteria which lea to different decisions as to how resources will be utilized.
	CAREER RELATED OBJECTIVE C-1	The student will make tentative occupational choices in term of his interest, capacities, and values.
	CAREER RELATED OBJECTIVE C-4	The student will differentiate between careers and jobs.
UNIT III:	**INVESTIGATING MAN'S BASIC INSTITUTIONS**	
1D	**POWER/VALUING**	The student will investigate selected societal units and expla how values affect the way power is employed by each of these
	CAREER RELATED OBJECTIVE E-5	The student will explore how economic needs and wants diffe and are provided for by the rewards of various occupational
2A	**CONFLICT/CHANGE**	The student will select examples of changes and show how the affect individuals.
	CAREER RELATED OBJECTIVE S-7	The student will analyze the changes which have taken place his value system as he moves toward maturity.
4C	**MORALITY/STABILITY**	The student will compare selected societies to analyze how specific elements of moral and ethical standards contribute t stability.
	CAREER RELATED OBJECTIVE S-5	The student will identify and practice attitudes and behaviors which generally apply to any work situation.

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

EIGHTH GRADE

1A	POWER/CHANGE	The student will analyze how the power of a group to affect decisions may change as societal goals change.
	CAREER RELATED OBJECTIVE Y-3	The student will analyze how societal needs create a demand for workers in various occupational area.
1B	POWER/INTERACTION	The student will evaluate selected examples of interaction and show how the relative power of individuals and groups involved affected the interaction.
	CAREER RELATED OBJECTIVE C-10	The student will construct the hierarchy for several occupational areas of his choice.
1C	POWER/STABILITY	The student will examine and compare how different societies maintain stability through the use of power.
1E	POWER/UTILIZATION	The student will compare and contrast examples of the use of political, economic, and military power to control the use of resources.
	CAREER RELATED OBJECTIVE E-3	The student will identify and analyze the characteristics of the American economy that affect job opportunity.
2B	CONFLICT/INTERACTION	The student will explain how conflict may result when a sub-group interacts with the total group.
	CAREER RELATED OBJECTIVE S-14	The student will give examples of interpersonal relations of workers that affect cooperative performance on a job and assess his ability to work in a similar situation.
2C	CONFLICT/STABILITY	The student will compare and contrast examples of conflict and examine the ways in which the need for stability may lead to resolution.
	CAREER RELATED OBJECTIVE T-9	The student will analyze the problems associated with the use of technology and research the proposed solutions to these problems.

2D **CONFLICT/VALUING**	The student will analyze examples of conflict resolution and explain how each situation was influenced by the societal value system.
CAREER RELATED OBJECTIVE S-13	The student will analyze how his preceptions of other people affect his ability to work cooperatively and identify any changes he wishes to make.
3B **INTERDEPENDENCE/INTERACTION**	The student will identify man's psychological needs and tell how different types of interaction affect the fulfillment of these needs.
CAREER RELATED OBJECTIVE C-3	The student will demonstrate kinds of work that involve working with people, working with ideas, and working with things.
3E **INTERDEPENDENCE/UTILIZATION**	The student will analyze how the comparative advantage that nations have in terms of resources can be used to bring about efficient distribution and use of resources.
CAREER RELATED OBJECTIVE E-1	The student will discuss and generalize that work in various occupational areas contributes to the nation's wealth which can be measured in terms of goods and services produced annually.
4A **MORALITY/CHANGE**	The student will examine several contemporary or historic situations involving morals and explain the process of how morals change through pressure from individuals or groups.
CAREER RELATED OBJECTIVE Y-2	The student will analyze how the customs, traditions, and attitudes of society affect jobs in broad occupational areas.
4B **MORALITY/INTERACTION**	The student will analyze actual examples of the interaction of individuals and/or groups to explain how differing moral standards affect interaction and how differing moral standards are brought out in interaction.
CAREER RELATED OBJECTIVE S-9	The student will analyze his values in terms of how they relate to personal work behavior, work situations, and occupations.
6A **DECISION-MAKING/CHANGE**	The student will evaluate how decision-making bodies work together to bring about and deal with changes.
CAREER RELATED OBJECTIVE T-7	The student will examine and evaluate technology in terms of the factors which give impetus to change and development.

6D DECISION-MAKING/VALUING	The student will analyze individual or group decisions in terms of how the values of the individuals involved affected the decision-making process and the decisions.
CAREER RELATED OBJECTIVE S-3	The student will analyze his abilities and interests in terms of occupational areas he may wish to enter.
7B TECHNOLOGY/INTERACTION	The student will analyze how the social interaction of a culture must often be changed to make the most efficient use of new technology.
CAREER RELATED OBJECTIVE T-6	The student will evaluate the impact on work and leisure time by withdrawing and by augmenting technology in occupational areas of his choice.
7E TECHNOLOGY/UTILIZATION	The student will analyze how technology can be used to bring about productive changes in environment.
CAREER RELATED OBJECTIVE T-1	The student will research and demonstrate how man uses resources and technology creatively in his work.
CAREER RELATED OBJECTIVE T-2	The student will analyze how technology is used creatively to develop various products from natural resources.
8A INSTITUTIONS/CHANGE	The student will explain why, as institutions change further changes result.
CAREER RELATED OBJECTIVE C-17	The student will participate in a variety of work experiences (simulating, working, observing) in broad occupational areas and analyze these experiences in terms of a future career choice.
8B INSTITUTIONS/INTERACTION	The student will examine how interactions differ depending upon the institutional settings.
CAREER RELATED OBJECTIVE C-9	The student will classify jobs into clusters on the basis of the skills and interests of the workers.
8D INSTITUTIONS/VALUING	The student will investigate a number of institutions and compare and contrast how they transmit values.

9B HABITAT/INTERACTION	The student will select environmental problems and use examples from different settings to describe how attempts to solve these problems require group action.
CAREER RELATED OBJECTIVE E-7	The student will investigate the geographical factors that affect various occupational areas.

Code:
C = Career
E = Economic
S = Self
T = Technology
Y = Society

INFUSION OF CAREER OBJECTIVES WITH SOCIAL STUDIES CELLS

LEVEL IV

	A CHANGE	B INTERACTION	C STABILITY	D VALUING	E UTILIZATION
1 POWER				C-7 The student will analyse the career hierarchy which reflects his vocational choice.	
2 CONFLICT	Y-5 The student will evaluate the laws society has enacted for his protection as producer and consumer of goods and services.	Y-1 The student will analyse the effects on a society when the workers of an occupational area withhold their services and debate the justification for such action.			
3 INTERDEPENDENCE	E-6 The student will assess how economic fluctuations may affect the job opportunities in the career area of his choice.	S-12 The student will observe the interaction of co-workers in situations which call for cooperation and determine any changes he might need to make in order to work effectively.	S-5 The student will demonstrate the attitudes and behaviors which enable him to obtain and hold a job.	C-4 The student will analyse his vocational choice and the possible careers which he might pursue in terms of his interest, abilities, and chances for success.	E-1 The student will evaluate a career area in terms of its contribution to the nation's productivity.
4 MORALITY		S-1 The student will analyse the ways his self concept affects his entrance and performance in a work situation.		C-3 The student will formulate a personal definition of work.	
5 INDIVIDUAL DIFFERENCES	C-14 The student will project his needs for vocational retraining in relation to job advancement, job change, and job loss. C-15 The student will interpret occupational trends and evaluate his transferable skills and knowledge that will facilitate retraining.	S-2 The student will evaluate his tentative career choice in terms of ways it will contribute to the maintenance of a positive self concept.	C-1 The student will select educational and training programs in terms of of his needs, interests, abilities, and values that will assist him in converting vocational preference into reality.	S-13 The student will analyse how his perception of other people affect his ability to work cooperatively. S-8 The student will evaluate the role that his values play in making his career choice.	S-9 The student will analyse the contribution to a specific work situation. E-5 The student will evaluate how the career area of his choice will provide for his economic needs and wants and affect his standard of living.
6 DECISION MAKING	S-4 The student will evaluate his attitudes and behaviors and their effect on his functioning in his work situation.	C-13 The student will evaluate [illegible] career choice in terms of his work experience. C-12 The student will participate in a realistic work situation as part of the school program or as a worker in the community.	T-5 The student will make inferences about how technology may affect his work and leisure time in his career choice.	E-4 The student will evaluate his application of economic concepts in making choices and decisions as a consumer and/or producer.	C-5 The student will analyse the degree to which hobbies and interests affect his present career choice. C-9 The student will meet the requirements for successful completion of his basic course work for job entry or further education.
7 TECHNOLOGY	T-4 The student will evaluate the extent to which technological change may affect the employment and the task requirements of his occupational choice.	T-7 The student will analyse the development of technology in the twentieth century in terms of its escalation.	T-2 The student will explain how the forces of resources, technology, and creative ability interplay in the career area of his interest.	Y-2 The student will explore the effect of changing customs, traditions, and attitudes in relation to his chosen career area.	T-1 The student will use resources, technology, and his creative ability to investigate and develop a project related to the career area of his interest. T-6 The student will develop his own action-oriented program to correct situations arising from the misuse of technology.
8 INSTITUTIONS	C-2 The student will make projections of work people may some day be doing.	C-8 The student will apply basic learnings in a work situation and analyse their effects upon his job performance. E-2 The student will identify and evaluate the economic incentive available in a career area in terms of his goals.	Y-4 The student will make a critical analysis of the reward structure of an occupational area as it relates to the reward system of the larger society.	S-3 The student will project a career plan which will reflect his abilities and interests.	E-3 The student will assess the extent to which economic characteristics may affect work opportunities in the career area of his choice.
9 HABITAT	E-7 The student will evaluate his career choice as it is affected by geographical factors.	T-3 The student will employ the technology of his career interest area and assess its contribution to the satisfaction of man's needs and desires.	T-8 The student will investigate how the technology of his career area can be more efficiently used to contribute to man's well being.	S-6 The student will analyse the impact of his environment on his feelings toward work and weigh these attitudes against his career plans. S-7 The student will develop a profile of the working environment of his career choice.	Y-3 The student will assess how future societal needs may affect vocational opportunity in the career area of his choice.

Revised draft - 10

A MODEL FOR COUNSELOR-TEACHER INTERACTION IN ANNE ARUNDEL COUNTY CAREER EDUCATION

STEP 1 - Preliminary Meetings

Career Education Coordinator
Guidance Coordinator
School Principal
Coordinator of Instruction
Other School Administrators
Total School Guidance Department
Career Education Counselor

INTERACTION
- Overview of Career Education Program
- Discussion led by Career Education Counselor to determine where school guidance department fits in
- Understanding and support from administration
- Commitment from school counselors
- Commitment from administrators

STEP 2 - Preliminary Planning

School Guidance Staff
Career Education Counselor

INTERACTION
- Specify what school counselors have been doing
- Determine specific needs of school
- Plan meeting with student and/or parent representatives
- Commit school counselors to further career education involvement
- Commit support and resources of Career Education

STEP 3 - Preliminary Planning - Students and/or Parents

School Guidance Staff
Student Representatives
Parent Representatives (OPTIONAL)
Career Education Counselor

INTERACTION
- Discussion of what students want and expect from Career Education
- Identify specific needs and interests of students that can be implemented through counselors interacting with teachers in classroom activities and/or with student groups

AND/OR (OPTIONAL)

- Determine parent knowledge of the Career Ed program
- Discussion of what parents want and expect from Career Education
- Identify specific interests of parents
- Determine ways in which parents could best function in the school Career Ed program

INTERACTION

Discussion of ways in which counselor can assist departments in implementing Career Education
Identify needs and wants of specific departments
Specify needs and wants of students and/or parents
Specific offers of assistance by guidance department - as consultants, resources, liaison, etc.
Commitment for meetings with each total department

STEP 4 - Department Chairpersons Contact

School Counselor(s)
Career Education Counselor
Administration Representative
Department Chairpersons
Career Education Resource Teachers
Student Representative(s)
Parent Representative(s) (OPTIONAL)

STEP 5 - Counselor-Teacher Series of Meetings

Each department - all members
School Counselor(s)
Career Education Counselor
Career Education Resource Teachers

INTERACTION

Offers of assistance from counselors
Determine specifically what teachers in each department want and are willing to do
Determine the specific role of parents
Commit counselors to whatever activities are feasible
Career Education Resource Counselor and Teachers assist however needed

INTERACTION

Counselor use as determined by needs of teacher i.e. training program, consultant, demonstrations in classroom, materials resource, liaison
Career Education Counselor as continuing resource to school counselor in whatever capacity needed
Career Education Resource Teachers as continuing resources to teachers

STEP 6 - Counselor - Teacher Interaction

School Counselor
Career Education Counselor
Individual Teacher

STEP 7 - Teacher-Student-Counselor Classroom Interaction

Teacher
Students
School Counselor

INTERACTION

Teacher-Student interaction in classroom
School Counselor as consultant, resource, or whatever capacity needed
Parents as resources, or whatever capacity needed
Career Education Counselor on call to school counselor
Career Education Resource Teachers on call to school teachers

1974-75 CHRONOLOGICAL CHART

ANNE ARUNDEL COUNTY PUBLIC SCHOOLS

memo

TO: Counselors in Area III

SUBJECT: Assessment Needed by June 20th

FROM: Nannell Grube

DATE: June 9, 1975

COPY TO: Mr. Pettigrew
Mr. Mitchell
Area III Coordinators
Mrs. Ann Koehler
Mr. Robert Jervis
Principals of Involved Schools

This is a request for your evaluation of the effect of activities conducted by the "Career Education Resource Counselor" in Area III this year. I would very much appreciate you completing this (as well as you can remember) and sending it back to me by basket at the Area Office by June 20th.

We have heard many times that a "Needs Assessment" should be conducted before changing a program, and this is essentially an assessment of how needs of counselors are being met. The information will be used by me for modifying the job description of Resource Counselor in Career Education for next year, and in revising the "Model for Counselor Teacher Interaction." These modifications and revisions will be included in the Guidance part of the "Interim Report" which is required by the U. S. Office of Education.

I deeply appreciate your help.

Thank you very much for your support and assistance in implementing the "Model for Counselor-Teacher Interaction" this year.

Please check your position assignment:

_____Elementary   _____Junior High   _____Senior High

Name (optional):____

CAREER EDUCATION RESOURCE COUNSELOR SURVEY

1. Approximately how many conferences did you have with the Career Education Resource Counselor this year (concerning Career Education Activities)?

A. in person	0	1-3	4-7	8-10	10-15	more
B. by telephone	0	1-3	4-7	8-10	10-15	more

2. If you were unable to use the services of the Career Education Resource Counselor, what would help clarify that person's role for you?

3. As a result of contact with the Career Education Resource Counselor:

	Approximate Number of Times			
	0	1-3	4-7	more than 7
A. I conducted (or co-led) faculty in-service meetings.				
B. I served as a resource to teachers seeking me out for Career Education				
C. I worked with students in the classroom with Career Education related materials.				
D. I worked with teachers in the classroom for Career Education related purposes.				
E. I conducted Career Education related student small group activities.				
F. My administrator(s) have consulted me for Career Education related reasons.				
G. Other				

4. I used the following Career Education related materials:

	Source			Use		Method	
Materials	from personal resources	from resource counselor	already in my school	with students	with teachers	in small groups	in class-room

5. For the future, what resources services do you think are needed?

	Yes	No
A. Building community resource lists.		
B. Career Education Materials.		
C. Conducting or Co-leading in-service.		
D. Developing a Career Center.		
E. Planning for PTA/CAC Meetings.		
F. Conducting a Needs Assessment		
G. Planning a Career Guidance Program.		

	Yes	No
H. Training in any specific skills such as:		✓
(1) developing self concept		
(2) decision making		
(3) values clarification		
(4) social communication skills. i.e. T-A, Carkhuff model, etc.		
(5) small group career guidance activities		
(6) classroom career guidance activities

Title of project: Career Guidance Workshop- Training for "Career Guidance Through Groups"

Coordinator: George R. Doenges, Coordinator of Instruction

Description: "The Career GuidanceThrough Groups" is a comprehensive career guidance program utilizing small group techniques. There are 40 lessons which are designed to be used in grades 10, 11 and 12. The curriculum material focuses on three general areas; self-awareness, labor market information, and tools for employment.

Follow-up activities: Implementation of specific lessons in social studies units in 75-76 by teachers and counselors at Arundel Senior.

Consultant(s) (If other than coordinator): Nanelle Grube, Counselor, Career Ed. Instructor

Schedule for meeting(s): DETAILED PLAN OF ACTIVITIES MUST BE ATTACHED

Date(s) - June 23
1. Introduction to program
2. Orientation slide, tape presentation
3. Training in group techniques
4. Session 1 training and video tape presentation

July 24 - Continued training in content of lessons utilizing video tapes and participant presentations.

July 25 -
1. End training sessions
2. Review sessions - discussion and evaluation
3. Planning for specific implementation at Arundel Senior

Hours per session: 5

SUGGESTED COUNSELOR ACTIVITIES RELATED TO IMPLEMENTATION OF CAREER EDUCATION OBJECTIVES

Revised
July, 1975

____
(School)

__________ Consult with administration about implementation of Career Ed related objectives, skills and policy.

__________ Implement CEEB Decision-making program through faculty workshops.

__________ Implement CEEB Decision-making through class groups working with the classroom teacher.

__________ Implement CEEB Decision-making program through small group career guidance sessions.

__________ Implement self-concept materials at my level with teacher or student groups.

__________ Implement Values Clarification strategies in faculty workshops.

__________ Implement Values Clarification strategies in class groups working with the classroom teacher.

__________ Implement Values Clarification strategies in small group career guidance sessions with students or teachers.

__________ Examine "Me & Jobs" (middle/junior high) and begin implementation.

__________ Become trained as a facilitator in the Texas Group Guidance program (senior high).

__________ Involve teachers in the Texas Group Guidance program and facilitate a class group.

__________ Coordinate and conduct career guidance groups with students.

__________ Coordinate and conduct career guidance groups with teachers.

__________ Coordinate and conduct career guidance groups with parents.

__________ Assist teachers in setting up and conducting career guidance groups.

__________ Develop a Career Resource Center in the Media Center utilizing paraprofessionals and/or student aides.

__________ Borrow the filmstrip on Career Centers and view it.

__________ Develop and maintain community business/industry resource file.

__________ Survey parents for use as speakers or work places to visit.

__________ Develop and maintain a parent resource file.

__________ Coordinate career related activities (field trips) outside of the school.

__________ Consult with teachers about their units which develop and clarify self-concept.

__________ Demonstrate materials which develop and clarify self-concept.

__________ Coordinate and/or take an active part in a Career Ed. PTA Night.

__________ Conduct parent groups in decision-making, values clarification, communication, assessment, attitude, etc. skills.

__________ Begin implementation of the counselor-teacher model as outlined in the proposal.

__________ Consult with the Career Education Resource Counselor (923-2200).

__________ Consult with the Career Education Resource Teachers in your area.

__________ Visit the Career Ed. Resource Teachers at the Area Offices and become familiar with the materials.

__________ Consult with media specialists, department chairpersons, grade-group chairpersons, and/or administrators about purchasing career ed. materials.

__________ Visit and confer with counselors who have implemented facets of the career ed. program in Anne Arundel County and/or other counties.

__________ Coordinate a meeting between teachers in your school and teachers in other schools who have successful career ed. programs.

__________ Plan an occupational information course for students in your schools.

__________ Coordinate a needs-assessment survey for students in your counseling population.

__________ Investigate the programs at the Vo-Tech Centers in order to better answer questions from students and parents regarding the Voc. Ed. Program.

__________ Attend a workshop at a Vo-Tech Center to become familiar with the courses offered.

__________ Contact the Social Studies, Math, Science, or Language Arts Resource Teachers in your area in order to become familiar with the new curriculums.

__________ Contact the above Resource Teachers for suggestions as to how to implement Career Ed. - Guidance objectives through these subjects.

ACTIVITIES OTHER THAN THOSE LISTED ABOVE THAT WILL BE IMPLEMENTED IN MY SCHOOL.

PROPER CONDUCT DURING AN INTERVIEW

1. Take a deep breath just before you go in.

2. Smile as you enter.

3. Give you name distinctly.

4. Men should use a firm handshake. Women are not expected to extend their hands.

5. Don't hang up your coat and hat unless given the invitation. You many create the impression that you are going to stay a long times.

6. State you specific job interest.

7. Never answer "Anything" when asked, "In what kind of work are you interested?" "Anything" is the red flag! It means nothing.

8. Let the interviewer take the initiative.

9. Answer all questions fully, truthfully and concisely. Watch the interviewer's attitude and mannerisms to ascertain how much to say. Do not talk yourself out of a job!

10. Avoid using slang.

11. Be poised and relaxed.

12. Look directly at the interviewer when talking with him, not at the walls or out the window.

13. Refrain from smoking unless invited.

14. Show interest in the job for which you are applying.

15. Never criticize others, including your former employer, even if justified.

16. Never beg for a position.

17. Do not argue or discuss your troubles

18. Leave promptly when the interviewer indicates the interview has ended.

19. Express appreciation for the interview. If you don't get the job, even if you get no encouragement, smile and be a good sport.

20. Thank the receptionist or other person who introduced you.

PAGES 157 THROUGH 160 CONTAINING A MEMO LISTING THE NAMES AND GRADES OF STUDENTS PARTICIPATING IN A TYPING PROGRAM WERE REMOVED FROM THIS DOCUMENT PRIOR TO ITS BEING SHIPPED TO THE ERIC DOCUMENT REPRODUCTION SERVICE.

The following schools have had at least one of their teachers attend the Elementary Typewriting Workshop:

Belle Grove
Glen Burnie Park
Glendale
Park
Richard Henry Lee
Woodside

Teachers from schools that do not have the typing program at this time have attended the workshop.

Each school is given a textbook, You Learn To Type by Lloyd and Krevolin, for each typewriter plus one or two for the teachers.

Each teacher attending the workshop receives a copy of the textbook and a copy of the Elementary Typewriting Manual which gives helpful hints and suggestions on teaching the typing classes.

FOREWORD

One of the persistent stumbling blocks in the pathway to quality vocational education programs has been the nature of, or in many instances the lack of, policy for vocational education at the state level. Some states presently have excellent statements of policy, but many do not. This project was planned to provide assistance to all states as they review or establish basic statewide policy for vocational education.

This project was a long time in the planning stage. It would have been perfectly possible for a person with extensive expertise in vocational education to develop some reasonable statements of statewide policy. But no one individual, despite extensive experience, could really feel the pulse of the nation as to the nature of appropriate contemporary statements of policy for vocational education at the state level.

Five states were selected for participation in the project . . . Washington, California, Texas, Ohio and Georgia . . . as having a representative sampling of vocational education programs in the nation. Six persons in positions involving policy formation were invited from each of the five states to form the project participant group (Appendix A). These participants represented vocational education at all levels; high school, adult school and community college. From the over 500 years of experience and the broad backgrounds of interest of the participants, it was possible to construct a consensus representing state vocational education policy with implications for local policy needs.

The total group met five times, one conference in each of the five states, to formulate policy statements. This proved to be an exciting professional experience for the total group because it was necessary to avoid provincialism and maintain a nationwide point of view. At the five conferences, the participants reviewed and reinterpreted the principles upon which vocational education is based, and identified or developed policy statements around categories that had been identified by the project's national advisory committee (Appendix B) at a December, 1974 meeting. The opinions of the persons attending the five conferences were supplemented, reinforced, and in some cases modified, by resource people who provided background material and insight on the topic of each particular meeting.

Upon completion of the five national conferences, a summary conference was held in August, 1975, with representatives from each of the participating states, for the purposes of making a final review and accomplishing a partial editing of the report. A meeting of the advisory committee was held on the day following the summary conference. A final review was held with representatives of the U.S. Office of Education in October, 1975.

This report is intended as a guide for all persons; state, county, and local, who mold or contribute to statewide policy for vocational education. Principles which have been restated and updated in order to serve as a basis for policies are included in the report. Policy statements concerning program, personnel, fiscal operation, and evaluation are included in an attempt to isolate and delineate some of the factors that effect the everyday operation of vocational education at the state level. The statements in this report are not operational policies, or rules and regulations, but are general statements that may be used to express the intent of society, business, industry, labor and the education hierarchy.

The Division of Vocational Education, University of California, Los Angeles, California, planned and conducted the project and the conferences that were part of the project. J. Lyman Goldsmith, retired Los Angeles City Schools Administrator, managed the project. He and his assistant arranged conference sites, schedules and activities, prepared conference materials, finalized agendas, arranged for resource services (Appendix C), handled project details, and reported project findings. Paul Bott assisted in project management and was responsible for research and writing. Clarence Fielstra, operating as an independent evaluator, evaluated all project activities and outputs. Nancy Goff, Administrative Assistant, and Judy Madson, Secretary, handled fiscal and secretarial details.

INTRODUCTION

The statements of vocational education principles and policies presented in this report must be viewed in relation to the historical background of vocational education planning and implementation in the United States. The statements of principles are not new, but are refinements and reinterpretations of statements that have previously been made. Not all of the policy statements are new, but many of them have been revised and updated.

By 1917, when implementation of the vocational movement in education began, at least eleven years of careful study had been devoted to the fundamental issues related to vocational education. Proponents of the vocational education movement had been careful to "think through" in great detail the purposes, the practices, and the ultimate goals of vocational education. This planning process had involved participation from a wide range of the American public. The list of such persons, if it could be reproduced, would represent a who's who of business, industry, agriculture, education, and the public at large. These were the men and women who believed in providing a better deal for the youth and adults who needed to improve their positions in the world of work. From the beginning, vocational education has been concerned with people and the work that they do.

The professional association which represented the interests of the growing number of people with concerns for vocational education was the National Society for the Promotion of Industrial Education, founded in New York in 1906. (This group is now known as the American Vocational Association.) Because vocational education was of national concern, because of the mobility of labor, and because of financial limitations among the states, the Society sought federal appropriations for secondary and adult vocational education to match the Congressional action for the colleges in 1862—the Morrill Act.

A long period of study, 1906-1917, by the professional association preceded congressional action. During this period many foundation elements for vocational education were examined in detail. Members of the Society came to agreement on the basic issues that they wanted as generalizable items to be applied to all of vocational education. For example, in 1907, they came to a conclusion on the question as to whom vocational education was to be made available. Their actual statement reads as follows: "race, creed, color, sex, or national origin shall not debar anyone from vocational education."

These foundation elements were identified in the proceedings and reports of the National Society for the Promotion of Industrial Education and were debated in annual meetings of the Society. Few areas of education have had such a thorough review before being implemented as did vocational education. The professional literature of the period, newspapers, and popular periodicals picked up the Society's ideas for comment and review. At one period of time, circa 1912-1914, Senator Carroll S. Page estimated that his activities alone concerning vocational education had reached more than ten million people. The early activities and studies resulted in the passage of the Smith-Hughes Act in 1917.

At the beginning of the vocational education movement there were no "experts" in vocational education. The principles and practices had to be learned by each person. A philosophy (as the term is used loosely in vocational education) had to be developed. This philosophy consisted actually of an understanding of the basic principles which had been identified between 1906 and 1917. The early teachers of the philosophy, policy, and principles of vocational education were the persons who had participated in developing the foundations for the structure of vocational education.

Presently, three generations later, these early leaders are gone. Few people now active in vocational education have had the privilege of "sitting at the feet of the masters" to learn about vocational education and thus develop a sound commitment to the field—a commitment based upon foundation principles.

The enactment of the two federal vocational education acts of 1963 and 1968 has proved to be a major cause of the tremendous increase in the number of vocational programs in the last fifteen years. Yet, parts of the allocations under the federal legislation have never been used, often because there has existed no policy or system for using the funds efficiently and effectively once they were released. Too often the policies that have been adopted by states have been adopted solely for the purpose of accepting certain funds provided by the federal legislation. Policy at the state level has not been adjusted to meet the new goals set for the vocational education effort by federal legislation, industry, and society.

To achieve the national goals of vocational education, wise planning and vigorous action is required of people in leadership positions. Educational decision-makers must be directly involved in the development of policy that will govern the nation's schools if national goals are to be met.

One of the major purposes of this project was to review and reinterpret some of the early principles of vocational education and then suggest optimum policy statements for use in four basic areas—program, personnel, finance, and evaluation. The project was an attempt to develop ways and means to increase the impact of vocational education funds by encouraging the highest level of decision-makers from five states to be participants in a leadership program that had as an aim the development of policy for vocational education that is based on sound social, philosophical, and economic principles.

When "vocational education" is referred to in this report, it should be understood that "quality vocational education" is meant: Quality vocational education has such components as:

(1) a qualified, competent staff;

9

(2) meaningful, effective, up-to-date curricula offerings;

(3) placement assistance for individuals who have received instruction;

(4) supportive community and business-industry elements; and

(5) built-in self adjusting mechanisms that anticipate or react to the demands of the labor market and society.

The policy statements contained in this report are generalizable to all vocational education and are prescriptive only in the sense that they provide examples from which rules may be developed. Administrative prescriptive rules, if they are needed at all, should be developed on the basis of general policy statements. The policy statements in this report have not been given any order of priority.

For Whom is This Report Intended?

This report is intended primarily for policy-makers at the state level; such as persons in education and areas of state government who occupy a decision-making role related to vocational education, or those who are in a position to influence policy at the state level. Included as policy-makers are members of state boards of education, state vocational education advisory committees, state boards of vocational education, and other state boards that have official functions related to vocational education. In addition, the report is intended for any person (state, county, and local) whose actions and pronouncements mold or contribute to statewide policy for vocational education.

How Can This Report be Used?

States vary widely in the extent to which they have developed viable, up-to-date policy for vocational education. While some states do have excellent policy statements, others do not. This report can be used by all states to review their own policy statements about vocational education, and to update, extend, or modify such policy statements. States can make an issue of having sound policy—policy that can be generalizable to all vocational education programs, and policy that is not prescriptive. States can review their "rules and regulations" for vocational education—the prescription for vocational education in a state—and can test or match the prescription against their policy. States may wish to incorporate their policy related to vocational principles in their state education codes, thereby declaring that policy to be that of the people of the states.

PRINCIPLES OF VOCATIONAL EDUCATION

To be effective, a policy must be based upon an underlying belief or assumption. Principles are basic truths, laws, or assumptions which determine the intrinsic nature or behavior of vocational education. Principles serve as the basis for policy and are inextricably bound to the economy, the labor force, and the social structure. The majority of the principles that guide vocational education today were first delineated during the period 1906 through 1917, and have been periodically reinterpreted to reflect changes in society, business, industry, and education. Principles that were first expressed as beliefs or theories, have since 1917 been verified and are now considered as standards or basic truths.

The principles contained in this report are based on beliefs as to what is or should be true in vocational education. Each statement is presented as if it actually is true, even though in some cases this ideal may not yet be reached.

The principles that are listed in this report are of a broad philosophical nature and are not intended as operational guidelines or rules and regulations.

Individual states may wish to use the principles contained in this section as the basis for broad general policies and then translate those policies into operational policies and rules and regulations.

- VOCATIONAL EDUCATION BENEFITS AND IS THE SHARED RESPONSIBILITY OF THE NATION, THE STATE AND THE LOCAL COMMUNITY.

- VOCATIONAL EDUCATION REQUIRES A COMPETENT STAFF WITH EXPERTISE IN THE FIELDS FOR WHICH THEY ARE RESPONSIBLE.

- VOCATIONAL EDUCATION IS DEVELOPED, CONDUCTED, AND EVALUATED IN CONSULTATION WITH APPROPRIATE ADVISORY COMMITTEES.

- VOCATIONAL EDUCATION IS BASED UPON A SYSTEMATIC ASSESSMENT OF SOCIAL, ECONOMIC, AND EMPLOYMENT NEEDS.

- VOCATIONAL EDUCATION REFLECTS AND ANTICIPATES THE CHANGING ATTITUDES AND VALUES OF SOCIETY AS WELL AS THE CHANGING REQUIREMENTS OF BUSINESS AND INDUSTRY.

- VOCATIONAL EDUCATION BENEFITS INDIVIDUALS IN RELATION TO ECONOMIC NECESSITY, PERSONAL SATISFACTION AND COMPETENCE ON THE JOB.

- VOCATIONAL EDUCATION PROVIDES OPTIONS THAT WILL BENEFIT INDIVIDUALS ENTERING, UPGRADING OR RETRAINING FOR EMPLOYMENT.
- VOCATIONAL EDUCATION PROVIDES FOR THE UNIQUE NEEDS, EXPERIENCES, AND VARYING ABILITIES OF INDIVIDUALS.
- VOCATIONAL EDUCATION IS OF DIRECT VALUE TO SOCIETY IN RELATION TO THE STABILITY OF THE ECONOMY AND THE SUPPLY AND DEMAND OF THE LABOR FORCE.
- VOCATIONAL EDUCATION PROVIDES OPPORTUNITIES FOR INDIVIDUALS TO DISCOVER AND DEVELOP THEIR VOCATIONAL INTERESTS AND ABILITIES AND TO BE ASSISTED TOWARD PLACEMENT IN THE OCCUPATION FOR WHICH THEY HAVE RECEIVED INSTRUCTION.
- VOCATIONAL EDUCATION DEVELOPS WORK ATTITUDES, SALEABLE SKILLS, AND USABLE KNOWLEDGE RELATED TO EMPLOYMENT.
- FLEXIBLE ENTRY AND EXIT FOR INDIVIDUALS IS A CHARACTERISTIC OF VOCATIONAL EDUCATION.
- VOCATIONAL EDUCATION IS APPROPRIATE FOR ALL INDIVIDUALS WITHOUT REGARD TO SEX, CREED, RELIGION, RACE, GEOGRAPHICAL LOCATION, OR PHYSICAL OR MENTAL HANDICAPS.
- VOCATIONAL EDUCATION IS AN IDENTIFIABLE INTEGRAL COMPONENT OF QUALITY COMPREHENSIVE EDUCATIONAL SYSTEMS.
- VOCATIONAL EDUCATION CONTRIBUTES TO THE CONCEPT THAT AN INDIVIDUAL'S OCCUPATION IS A MAJOR COHESIVE FORCE IN THE CONTINUITY OF THAT INDIVIDUAL'S LIFE.
- VOCATIONAL EDUCATION LEARNING IS MORE EFFECTIVE WHEN IT OCCURS IN A CONTEXT THAT EITHER IS OR SIMULATES AN ACTUAL JOB SITUATION.
- VOCATIONAL EDUCATION IS CONCERNED WITH THE TOTAL GROWTH OF INDIVIDUALS.
- VOCATIONAL EDUCATION IS FOR THOSE INDIVIDUALS WHO NEED IT, WANT IT, AND ARE ABLE TO PROFIT BY IT.

- VOCATIONAL EDUCATION IS HELD ACCOUNTABLE AND IS EVALUATED ON THE BASIS OF OBJECTIVES, PROCESSES, PRODUCTS, COSTS AND COMMUNITY ACCEPTANCE.

- VOCATIONAL EDUCATION IS COORDINATED AMONG THE VARIOUS AGENCIES AND INSTITUTIONS SO AS TO MAXIMIZE AVAILABLE RESOURCES.

PROGRAM POLICIES

The total vocational education program consists of the courses, sequence of courses, or groups of courses that comprise the total offerings in vocational education. The program could be as broad as the occupational structure itself except that federal legislation under the title of "vocational education" does not include occupations that are classified as *professional* or that require a *baccalaureate or higher degree.*

The vocational education program is intended to be closely related to the occupations or jobs that employ most of the people. In this sense the program is sensitive to employment and can be expected to change as employment demands fluctuate or change. As new occupations and jobs are developed that create an employment market, vocational education is expected to adapt its program to include these new employment areas. Similarly, as old occupations cease to provide an employment market, vocational education is expected to reject such preparation as a part of its program.

An apparent conflict of principles frequently appears when an enrollment demand exists, but an employment demand does not exist. Denying individuals the right to instruction they desire—the freedom of choice concept—appears to be inconsistent when one applies the employment potential concept. The freedom of choice concept is modified in vocational education theory by an additional phrase—"must be able to profit from the instruction." Since an ultimate aim of vocational education is to educate people so that they might be placed in a job, "profit" is often interpreted to have a "monetary" value rather than a "personal" value overtone. So, in a sense, complete freedom in program development is modified by employment opportunities.

The vocational education program is also influenced by the "availability" concept in vocational education. It is incumbent upon the states to study carefully the availability concept and to make it possible for vocational education instruction to be "available" to all. Extremes in the application of the availability concept appear at times to have impossible, or impractical solutions.

The policy statements in this section address the extent and scope of vocational programs, the people to be served, and criteria for use in program planning. In many instances, these statements could be directly incorporated into state education codes, while in other cases they might require some modification in order to fit state education patterns.

- VOCATIONAL EDUCATION SHALL BE PROVIDED TO THE EXTENT THAT ALL INDIVIDUALS LEAVING OR GRADUATING FROM EDUCATIONAL INSTITUTIONS WILL HAVE HAD THE OPPORTUNITY TO OBTAIN A SALEABLE SKILL.

- VOCATIONAL EDUCATION PROGRAMS SHALL PROVIDE FOR A REALISTIC BALANCE BETWEEN THE VOCATIONAL INTERESTS OF INDIVIDUALS AND THE NEEDS OF BUSINESS, INDUSTRY, AND SOCIETY.

- VOCATIONAL EDUCATION PROGRAMS SHALL INCLUDE INSTRUCTION IN READING, ORAL AND WRITTEN EXPRESSION, COMPUTATION, AND SOCIAL INTERACTION AS THEY ARE REQUIRED BY THE OCCUPATIONS.

- VOCATIONAL EDUCATION PROGRAMS SHALL PROVIDE OCCUPATIONAL INFORMATION AND GUIDANCE.

- VOCATIONAL EDUCATION PROGRAMS SHALL BE DESIGNED TO SERVE ALL INDIVIDUALS OF SECONDARY SCHOOL AGE OR OLDER, INCLUDING THOSE WHO HAVE ACADEMIC, SOCIOECONOMIC, CULTURAL, PHYSICAL OR OTHER HANDICAPS, AND WHO NEED OR CAN PROFIT FROM THE INSTRUCTION.

- VOCATIONAL EDUCATION PROGRAMS SHALL BE DESIGNED (1) TO PREPARE OR RETRAIN YOUTH AND ADULTS FOR EMPLOYMENT OR FOR ADVANCEMENT IN RECOGNIZED AND NEW AND EMERGING OCCUPATIONS; OR (2) TO PREPARE INDIVIDUALS FOR ENROLLMENT IN ADVANCED VOCATIONAL EDUCATION PROGRAMS.

- VOCATIONAL EDUCATION SHALL BE PROVIDED FOR YOUTH AND ADULTS TO ENABLE THEM TO BE PREPARED FOR, RETRAINED, OR UPGRADED IN RECOGNIZED AND NEW AND EMERGING OCCUPATIONS.

- VOCATIONAL EDUCATION PROGRAMS SHALL BE PROVIDED THAT ALLOW INDIVIDUALS THE OPPORTUNITY TO ENTER, PROGRESS, AND EXIT AS THEIR SPECIFIC NEEDS DICTATE.

- VOCATIONAL EDUCATION PROGRAMS SHALL BE DEVELOPED AND PERIODICALLY REVISED TO REFLECT SOCIETAL, ECONOMIC, AND OCCUPATIONAL CHANGES.

- VOCATIONAL EDUCATION THAT IS REALISTIC IN TERMS OF ACTUAL OR ANTICIPATED OCCUPATIONAL REQUIREMENTS SHALL BE PROVIDED TO ALL INDIVIDUALS WHO NEED IT AND ARE ABLE TO PROFIT FROM IT.

- VOCATIONAL EDUCATION PROGRAMS SHALL BE DEVELOPED WITH INPUT FROM SUCH AGENCIES AS LABOR, EMPLOYMENT OR MANPOWER, COMMUNITY, AND EMPLOYER GROUPS.

- VOCATIONAL EDUCATION PROGRAMS SHALL BE DEVELOPED IN CONSIDERATION OF NATIONAL, STATE AND LOCAL LABOR MARKET FORECASTS.

- VOCATIONAL EDUCATION PROGRAM OFFERINGS SHALL BE DETERMINED ON THE BASIS OF IDENTIFIABLE NEEDS, OCCUPATIONAL ADVISORY COMMITTEE RECOMMENDATIONS, EMPLOYMENT STATISTICS, AND CURRENT OCCUPATIONAL SURVEYS.

- VOCATIONAL EDUCATION ACTIVITIES, SUCH AS PLANNING, PROGRAMMING, OPERATING, AND EVALUATING, SHALL BE APPROPRIATELY ARTICULATED AMONG ALL AGENCIES AND INSTITUTIONS INVOLVED.

- VOCATIONAL EDUCATION INSTITUTIONS AND AGENCIES WITHIN THE STATE SHALL STRUCTURE INFORMATION SYSTEMS WHICH SHALL INCLUDE COMMON DATA ELEMENTS TO AID IN PROGRAM DECISION-MAKING AND LEGISLATIVE ANALYSIS.

PERSONNEL POLICIES

An effective comprehensive vocational education program can only be implemented and made operationally functional today with a qualified and competent staff of teachers, supervisors and administrators.

Federal legislation has not addressed the personnel problem in vocational education since the Smith-Hughes Act of 1917. In the past, primary concern was based on the teacher and teacher competence. Vocational personnel thought to be competent at the time they were hired were assumed to be competent forever. To some degree, in this same period of time, state-level policies have been directed toward those who plan, organize and administer vocational education programs rather than those who teach. A new look at state-level policies for vocational education personnel is needed.

Vocational teachers supply learning experiences in the applied, theoretical, and socio-cultural domains and serve as models by virtue of their competence and behavior. Vocational education supervisors and administrators must know and use occupational subject area content, management methods and techniques, and interpersonal relations. Vocational teacher educators must use up-dated teaching techniques and serve as models for vocational teachers.

These statements are related to statewide personnel policies and are limited to personnel identified as instructors, coordinators, supervisors, directors, teacher educators, or other similar titles for personnel in vocational education. This section does *not* include statements related to students. States may wish to add policies for students to complete their policy statements.

- ALL INSTRUCTIONAL, SUPERVISORY, ADMINISTRATIVE, AND TEACHER EDUCATION PERSONNEL IN VOCATIONAL EDUCATION AT THE STATE AND LOCAL LEVELS SHALL MEET MINIMUM PROFESSIONAL STANDARDS WHICH ARE SET AND PERIODICALLY REVIEWED AND UPDATED BY AN APPROPRIATE STATE AGENCY.

- ALL VOCATIONAL EDUCATION PERSONNEL (INSTRUCTIONAL, SUPERVISORY, ADMINISTRATIVE AND TEACHER TRAINING) SHALL:

  (A) BE COMPETENT VOCATIONAL TEACHERS;

  (B) BE OCCUPATIONALLY PROFICIENT IN THEIR FIELD OF INSTRUCTION OR SUPERVISION; AND

  (C) POSSESS ACTUAL WORK EXPERIENCE BEYOND THE LEARNING PERIOD IN THEIR FIELD OF INSTRUCTION OR SUPERVISION.

17

- THE STATE SHALL SUPPORT DEVELOPMENT AND IMPLEMENTATION OF PRESERVICE AND INSERVICE EDUCATION IN THE PRINCIPLES AND PRACTICES OF VOCATIONAL EDUCATION FOR PERSONS WITH ADMINISTRATIVE RESPONSIBILITIES IN GENERAL EDUCATION.

- THE STATE SHALL MAINTAIN ADEQUATE PROGRAMS OF PRESERVICE AND INSERVICE EDUCATION FOR VOCATIONAL EDUCATION INSTRUCTIONAL, SUPERVISORY, ADMINISTRATIVE, TEACHER TRAINING, AND SUPPORT PERSONNEL.

- THE DEVELOPMENT OF INSTRUCTIONAL COMPETENCIES AND THE MAINTENANCE AND IMPROVEMENT OF OCCUPATIONAL SKILLS SHALL BE THE SHARED RESPONSIBILITY OF THE INDIVIDUAL, THE LOCAL EDUCATIONAL AGENCY, THE STATE AND THE TEACHER TRAINING INSTITUTIONS.

- APPROPRIATE CONSIDERATION IN THE FORM OF SALARY AND FRINGE BENEFITS SHALL BE GIVEN TO VOCATIONAL EDUCATION PERSONNEL BASED ON THEIR DEMONSTRATED OCCUPATIONAL COMPETENCE AS WELL AS PROFESSIONAL PREPARATION AND YEARS OF SERVICE.

- PERIODIC EVALUATION OF VOCATIONAL EDUCATION PERSONNEL SHALL BE CONDUCTED BY THE EMPLOYING STATE OR LOCAL AGENCY OR INSTITUTION.

- RECRUITMENT, SELECTION, EMPLOYMENT AND ADVANCEMENT OF VOCATIONAL EDUCATION PERSONNEL SHALL BE CONSISTENT WITH CURRENT AFFIRMATIVE ACTION POLICIES.

- THE STATE SHALL REQUIRE ALL VOCATIONAL EDUCATION PERSONNEL, INCLUDING TEACHERS, SUPERVISORS, ADMINISTRATORS, AND TEACHER EDUCATORS, TO HAVE INDIVIDUALIZED PLANS OF PERSONAL PROFESSIONAL DEVELOPMENT THAT WILL BE REVISED AS NEEDED.

- THE STATE SHALL PROVIDE ADEQUATE PROGRAM AND SUPPORT SERVICES FOR ORIENTING NEW PERSONNEL AT ALL LEVELS OF THE VOCATIONAL EDUCATION SYSTEM.

FISCAL POLICIES

The fiscal policies for vocational education at the state level proposed in this section involve much more than the development of statements concerning the expenditure of federal funds, although state policy must include items dealing with that issue. State policies regarding the financing of vocational education must relate to the total expenditures of funds for vocational education so that such funds are managed and spent wisely. It is in this sense that financial policy must be generated at the state level for the financing of vocational education in total.

The national program of vocational education was created as a general partnership between the federal government and the states. Federal funding of vocational education became necessary because the states could not financially support the program in its entirety. In 1917, the federal portion of the funds spent for vocational education was quite significant in relationship to the total amount. The original law for vocational education specified that the partnership be of the nature that each federal dollar be matched by state or local dollars, or both. The original concept still applies in vocational education, but in the years since 1917 the program has grown in size and expanded in offerings so that nearly 14 million students are now enrolled. The ratio between federal, state and local funding has changed significantly. The total cost of vocational education in the nation, combining federal, state, and local funds, amounts to $3.5 billion to $4.0 billion. Only about $600 million of this total national expenditure for vocational education is federal funds.

It was never intended that federal funding of vocational education should pay the total costs of vocational education. Although at the beginning of the vocational education movement the amount of federal funding approximated 50 percent of the total expenditures, that percentage has decreased considerably in the years that followed to approximately 15 percent. The total funding of vocational education is deemed now, as it always has been, a combination of funds from the federal government, the state governments, and the local governments.

The bulk of the funding for vocational education must of necessity come from the state and local governments. Just what part is borne by state funds and by federal funds varies among the states. Some states contribute significant amounts toward vocational education over and beyond the funding that is provided for all persons in school, while some states do not provide an adequate funding arrangement at the state level to conduct the vocational education program.

The statements in this section serve as guidelines for the states in examining their funding policy for vocational education and in generating appropriate state policy.

19

- ALL LEVELS OF GOVERNMENT (NATIONAL, STATE AND LOCAL) SHALL COOPERATE IN FINANCING VOCATIONAL EDUCATION.

- FEDERAL VOCATIONAL EDUCATION FUNDS SHALL BE USED TO SUPPLEMENT STATE AND LOCAL FUNDS IN SUCH AREAS AS: (1) PERSONNEL DEVELOPMENT, INCLUDING TEACHER TRAINING AND LEADERSHIP DEVELOPMENT; (2) PROGRAM START-UP COSTS; (3) SPECIAL TRAINING NEEDS; (4) EQUIPMENT ACQUISITION AND REPLACEMENT; (5) CONSTRUCTION; (6) RESEARCH; AND (7) CURRICULUM MATERIALS DEVELOPMENT.

- STATE AND LOCAL FUNDS SHALL BE PROVIDED FOR BASIC VOCATIONAL EDUCATION COSTS AND FOR THE MAINTENANCE OF VOCATIONAL EDUCATION PROGRAMS.

- FUNDING OF VOCATIONAL EDUCATION PROGRAMS SHALL BE BASED ON A PLANNING SYSTEM WHICH IDENTIFIES AND THEN ELIMINATES OR AVOIDS UNNECESSARY PROGRAM DUPLICATION.

- THE ALLOCATION OF VOCATIONAL EDUCATION FUNDS TO LOCAL EDUCATIONAL AGENCIES SHALL CONSIDER SUCH FACTORS AS: IDENTIFIED NEEDS OF VOCATIONAL EDUCATION FOR THE POPULATION WITHIN THE LOCAL EDUCATIONAL AGENCY DISTRICT, SPECIFIC LOCAL PLANS TO MEET THE IDENTIFIED NEEDS, THE COMPATABILITY OF SUCH PLANS WITH LONG-RANGE OBJECTIVES, CURRENT AND PROJECTED LABOR MARKET NEEDS, AND JOB OPPORTUNITIES AT THE NATIONAL, STATE, AND LOCAL LEVELS.

- THE STATE, WHEN ESTABLISHING RATES OF REIMBURSEMENT FOR THE RESIDUAL OR EXCESS COSTS OF VOCATIONAL EDUCATION, SHALL CONSIDER SUCH FACTORS AS THE SOCIOECONOMIC LEVEL OF THE POPULATION TO BE SERVED AND THE TAX BASE OF LOCAL EDUCATIONAL AGENCIES.

- THE CONTINUED DISBURSEMENT OF STATE AND FEDERAL VOCATIONAL FUNDS TO LOCAL EDUCATIONAL AGENCIES SHALL BE BASED ON THE ABILITY OF THE VOCATIONAL PROGRAMS TO ACHIEVE SPECIFIED, MEASURABLE OBJECTIVES.

- THERE SHALL BE A SINGLE PLAN FOR VOCATIONAL EDUCATION IN THE STATE AND ONE AGENCY FOR RECEIPT AND DISBURSEMENT OF FEDERAL FUNDS, ALTHOUGH MORE THAN ONE ADMINISTRATIVE AGENCY MAY HAVE RESPONSIBILITY FOR ADMINISTERING PARTS OF THE PLAN.

- THE STATE SHALL ALLOCATE FUNDS FOR CONDUCTING VOCATIONAL EDUCATION RESEARCH, DEVELOPMENTAL PROJECTS, DEMONSTRATION PROGRAMS, AND EXEMPLARY PROJECTS.

- ACCOUNTING SYSTEMS SHALL BE DEVELOPED AND USED THAT ARE DESIGNED TO CLEARLY IDENTIFY RECEIPTS, DISBURSEMENTS, AND BALANCES OF THE SEVERAL FUNDS USED TO FINANCE VOCATIONAL EDUCATION.

- THE STATE SHALL ADVISE AND INFORM ALL LOCAL EDUCATIONAL AGENCIES AND INSTITUTIONS OF THE RESOURCES AND SERVICES AVAILABLE FOR PROGRAMMING, PLANNING AND BUDGETING OF VOCATIONAL EDUCATION ACTIVITIES.

- THE STATE SHALL ESTABLISH STANDARDS AND CRITERIA FOR THE DISBURSEMENT OF STATE AND FEDERAL MONIES TO MAINTAIN AND EXPAND VOCATIONAL EDUCATION.

- SCHOOL DISTRICTS WHICH ARE FINANCIALLY UNABLE TO PROVIDE FACILITIES AND EQUIPMENT, OR WHICH HAVE FEWER THAN THE REQUIRED NUMBER OF STUDENTS TO MAINTAIN A VOCATIONAL EDUCATION PROGRAM, SHALL ENTER INTO CONTRACTS OR AGREEMENTS WITH APPROVED EDUCATIONAL INSTITUTIONS FOR THE INSTRUCTION NEEDED.

EVALUATION POLICIES

It has been repeatedly recommended by curriculum and vocational education practitioners that an evaluation process be an integral part of the vocational education system in order to assure quality control. Evaluation, as an integral part of the instructional system, involves the students, instructors, administrators, advisory groups, and employers, and usually incorporates student follow-up studies. Evaluation reports typically provide statistical and verbal data that are used in the decision-making process.

Evaluation of students in terms of stated performance objectives must be an inherent part of the vocational program if the instructor is to know whether the students are ready for employment or advanced training at the end of the course or program. The results of student evaluations may serve as the basis for upgrading the quality of instruction, or for modifying the original course or program objectives.

Evaluation of vocational education personnel in terms of their qualifications and competencies is also needed in order to maintain a quality delivery system. Personnel evaluation may consist of self-evaluation, peer evaluation, or evaluation by persons external to the system.

The maintenance of a quality control system for vocational education requires evaluation of the goals, processes, and products of the vocational instruction. Quality assurance implies an interrelationship of the curriculum itself, the instruction and administration of the program, and the evaluation of the goals, processes, and products of the vocational education system. Curriculum, instruction, and evaluation are inseparable elements of the vocational education system. The statements related to evaluation of vocational education address the necessity of maintaining that interrelationship.

- EVALUATION SHALL BE AN INTEGRAL PART OF THE STATE'S VOCATIONAL EDUCATION SYSTEM, AND THE APPROPRIATE STATE AGENCY, THROUGH THE STATE PLAN FOR VOCATIONAL EDUCATION, SHALL MAKE PROVISIONS FOR PERIODIC AND CONTINUOUS EVALUATION PROCEDURES AT BOTH STATE AND LOCAL PROGRAM LEVELS.

- THE GOALS AND OBJECTIVES GENERATED BY THE PLANNING PROCESS SHALL BE REVIEWED AND EVALUATED BY GROUPS BOTH EXTERNAL AND INTERNAL TO THE FORMAL EDUCATION PROCESS.

- THE VOCATIONAL EDUCATION EVALUATION PROCESS SHALL INVOLVE, BUT NOT BE LIMITED TO, ADMINISTRATORS, TEACHERS, STUDENTS, COUNSELORS, AND OTHER SUPPORT STAFF.

- THE VOCATIONAL EDUCATION EVALUATION PROCESS SHALL INVOLVE PERSONS EXTERNAL TO THE FORMAL EDUCATIONAL PROCESS INCLUDING, BUT NOT LIMITED TO, REPRESENTATIVES OF COMMUNITY AND GOVERNMENTAL AGENCIES, BUSINESS, INDUSTRY, LABOR AND MANAGEMENT.

- THE STATE, IN COOPERATION WITH THE STATE ADVISORY COUNCIL FOR VOCATIONAL EDUCATION AND OTHER GROUPS, SHALL EVALUATE THE STATEWIDE ANNUAL AND LONG-RANGE VOCATIONAL PROGRAM OBJECTIVES.

- EVALUATION ACTIVITIES SHALL BE ESTABLISHED AND CONDUCTED AT PREDETERMINED INTERVALS IN THE PLANNING, DEVELOPMENT, AND OPERATION PHASES OF THE VARIOUS STATE AND LOCAL VOCATIONAL PROGRAMS.

- THE ASSESSMENT OF NEEDS AND THE ESTABLISHMENT OF QUANTIFIABLE GOALS AND OBJECTIVES DESCRIBING DESIRED OUTCOMES SHALL BE USED AS A BASIS FOR STATE VOCATIONAL EDUCATION PLANNING.

- EVALUATION OF STATE INSERVICE EDUCATION PROGRAMS SHALL BE PROVIDED FOR AND CONDUCTED BY THE APPROPRIATE STATE AGENCY, AND THE REPORTS OF SUCH EVALUATION STUDIES SHALL SERVE AS A BASIS FOR THE PLANNING AND REVISION OF SUCH PROGRAMS.

- THE VOCATIONAL EDUCATION PLANNING PROCESS SHALL BE DOCUMENTED IN SUCH A FORMAT THAT THE TECHNIQUES AND THE CONTENT OF THE PLANNING PROCESS MAY BE EVALUATED AND USED IN FUTURE PLANNING.

- THE STATE AND LOCAL PLANS FOR VOCATIONAL EDUCATION SHALL BE PERIODICALLY REVIEWED BY STATE ADVISORY COUNCILS AND OTHER GROUPS AT THE STATE AND LOCAL LEVELS.

- EVALUATION SYSTEMS OF STATE AND LOCAL AGENCIES SHALL BE COORDINATED TO ELIMINATE UNNECESSARY DUPLICATION OF EFFORT.

- VOCATIONAL EDUCATION PROGRAMS SHALL BE EVALUATED ON THE BASIS OF SUCH CRITERIA AS THE DEGREE TO WHICH STATED OBJECTIVES ARE MET, THE PROCESSES THAT ARE USED TO MEET THE OBJECTIVES, THE COSTS OF THE PROGRAMS, AND THE DEGREE OF COMMUNITY ACCEPTANCE OF THE PROGRAMS.

- THE DATA THAT ARE USED FOR VOCATIONAL EDUCATION PLANNING PURPOSES SHALL BE PERIODICALLY REVIEWED, REVISED, AND UPDATED BY GROUPS THAT INCLUDE REPRESENTATIVES FROM EDUCATION, GOVERNMENT, LABOR, MANAGEMENT, AND THE GENERAL PUBLIC.

- THE SYSTEM OF EVALUATION SHALL PROVIDE FOR FOLLOW-UP INFORMATION ON INDIVIDUALS LEAVING OR GRADUATING FROM VOCATIONAL EDUCATION PROGRAMS.

- ALL STATE AND LOCAL AGENCIES SHALL AGREE UPON AND UTILIZE COMMON ITEMS OF EVALUATION INFORMATION USEFUL TO DECISION-MAKERS.

- ALL VOCATIONAL EDUCATION EVALUATION REPORTS SHALL BE MADE AVAILABLE TO APPROPRIATE GROUPS AND AGENCIES.

- EVALUATION REPORTS SHALL BE WRITTEN USING TERMINOLOGY AND LANGUAGE THAT IS UNDERSTANDABLE BY THE GENERAL PUBLIC.

PUBLICATION DATE: 15OCT75

TITLE: CAREER EDUCATION NOW MODEL FOR CAREER EDUCATION CURRICULUM K-14 FOR A RURAL-URBAN SCHOOL DISTRICT. INTERIM REPORT (JULY 1, 1974-JUNE 30, 1975).

PERSONAL AUTHOR: TURPIN, JERRY PAUL

DESCRIPTOR: *COMPREHENSIVE PROGRAMS; *CAREER EDUCATION; *ELEMENTARY SECONDARY EDUCATION; CAREER AWARENESS; BEHAVIORAL OBJECTIVES; *CURRICULUM DEVELOPMENT; *TEACHER IMPROVEMENT; CAREER EXPLORATION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 41P.; FOR A THIRD PARTY EVALUATION OF THE PROGRAM, SEE RELATED DOCUMENT VT 102 865 IN THIS ISSUE.

ABSTRACT: THE BEDFORD COUNTY PROGRAM WAS DESIGNED TO IMPLEMENT A TOTAL CAREER EDUCATION PROGRAM K-14. THE MODEL DELINEATES FOUR AREAS: ELEMENTARY AWARENESS, SECONDARY EXPLORATION, SECONDARY DISADVANTAGED CLASS, AND STAFF DEVELOPMENT. IN THE YEAR COVERED BY THIS ANNUAL REPORT, MAJOR EFFORT WAS DIRECTED TO ELEMENTARY TEACHER INVOLVEMENT AND THE WORK EXPERIENCE PROGRAM. AN ELEMENTARY TEACHERS' ACTIVITY GUIDE WAS REVISED, EVALUATED, AND DISTRIBUTED TO ALL ELEMENTARY TEACHERS; CURRICULUM MATERIALS FOR THE DISADVANTAGED WERE DEVELOPED THAT FOCUSED ON CAREER PLANNING AND DECISIONMAKING. IT WAS RECOMMENDED THAT FUTURE PLANNING BE AIMED AT THE SECONDARY AND INSERVICE AREAS. THIS REPORT INCLUDES A REPORT SUMMARY, GOALS AND OBJECTIVES OF THE PROJECT INCLUDING STATEMENTS OF BEHAVIORAL OBJECTIVES FOR EACH GRADE LEVEL IN AREAS OF CONCERN APPROPRIATE FOR THAT LEVEL, AND A DESCRIPTION OF THE PROJECT DESIGN. ALSO LISTED ARE TITLES OF CAREER EDUCATION VIDEO TAPES BY GRADE LEVEL. (RG)

I. SUMMARY OF THE REPORT

A. Time period covered by the project:

July 1, 1974 - June 30, 1975

B. Goals and objectives of the project:

a. Design and development of a Model Career Education Curriculum K-14 that can serve as an exemplary program that will assist other school divisions to move toward a total career education concept.

b. Increase the self-awareness of students leading to an improved self-concept which in turn would lead to the following:

   (1) Improved pupil attendance

   (2) Reduction in student discipline problems

   (3) Reduction of the division-wide dropout rate

   (4) Reduction of academic failure

   (5) Increase in the percent of graduates continuing education in colleges and institutions other than colleges

   (6) Increase the percent of graduates expressed as a percent of the first grade beginning school twelve years earlier

c. Make academic subject matter more relevant to students and county-wide scores on tests evaluating basic skill competencies of our students

d. Develop favorable student attitudes toward the personal, social, and economic significance of work

e. Assist each student in developing and practicing career decision making skills

f. Increase career awareness of pupils in Grades K-6

g. Develop guidance counselor and teacher awareness and skills through a comprehensive in-service program that will assist in implementing a total career education program

h. Develop a procedure that will lead to curriculum revision centering around the career education theme

i. Revise the exploratory course concept in Bedford County Public Schools' Grades 7-8 to relate to the "career clusters" of the career education concept

j. Provide job preparation in a wider variety of occupational areas now available to Bedford County Public School students

6

k. Expand opportunities for work-study and cooperative education experiences for pupils

l. Improve placement services for all exiting students moving toward the goal of placing each in a job or post-secondary occupational or baccalaureate program

m. Provide for the flexible exit and re-entry of pupils into the educational program

n. Broaden student opportunities for "beyond-the-school walls" educational experiences including community college credit work

o. Utilize community and area resources to a greater degree in order to provide more and varied educational experiences for students

p. Provide job entry skill training for selected disadvantaged students at the ninth and tenth grade levels

C. Procedures followed:

The career education model is divided into four separate but interwoven areas: elementary awareness, secondary exploration, secondary disadvantaged class, staff development.

The elementary awareness component is built around the classroom teacher as implementer of career activities. Activity units, infused into the normal curriculum, have been developed by elementary teachers as a starting point for implementation.

Career resource teachers, funded under the project, serve as liason between teacher and community resources. They coordinate school-community activities, resource speakers, field trips, etc.

The secondary exploration phase of the project is centered around teacher involvement in implementing career-centered class activities. Twelve exploratory areas are available for those eighth and ninth grade students who desire career exploration in the middle grades. Ninteen vocational-technical courses are available to secondary students, including twelve that feature a work experience phase.

The secondary disadvantaged class is aimed at those students who are educationally disadvantaged in that they are at least two grades defidient in reading and math skills and have been identified as potential drop-outs. This program provides them with the necessary career-centered academic work and technical skills work to prepare them with an entry level skill at the end of the program. The object of the program is two-fold:

a) those students who finish the program and leave school, will leave with an entry level job skill

b) those students who finish the program and elect to remain in school will have acquired the necessary academic units to proceed toward high school graduation

The staff development phase of the program is aimed at providing those professional staff members, teachers, administrators and supervisors, with the needed expertise in order to continue a comprehensive career education program following the end of the Part D exemplary program. This is accomplished through county-wide in-service meetings, in-school meetings, and special group meetings.

D. Results and accomplishments:

1. At least 75% of all elementary teachers, at least 50% of all middle grade teachers, and at least 25% of all senior high teachers have carried out at least five career education activities in their classrooms.
2. At least 50% of all elementary and middle grade students have participated in at least two "hands-on" career projects.
3. At least 15% of all parents of students have participated in some form an educational experience within the school directly related to career education.
4. At least 50% of all senior high school students have been involved in some form of work experience during the school year.
5. At least 90% of all elementary teachers, and 50% of all secondary

8

teachers have participated in a four hour in-service program during the project period.

6. At least 20% of all twelvth grade students were involved in the work experience program developed under the Part D exemplary grant

7. A comprehensive evaluation of the effectiveness of the career education program has been conducted by IBEX, Inc. and the results accompany this report.

E. Evaluation:

During the 1974-1975 school year, IBEX, Inc. developed a design plan for the comprehensive evaluation of the Bedford, Virginia career education program. The results from the evaluation indicate that certain areas of weaknesses exist. Teacher involvement is at a high level, but utilization of project supplied materials is at a low level.

The evaluation also reports that a more efficient financial record system is needed in order to determine which segments of the program receives certain amounts of money.

The students information will serve as baseline date for the 1975-1976 evaluation.

F. Conclusions and Recommendations:

During the 1974-1975 school year, much effort was put on elementary teacher involvement and also on the work experience program. During the 1975-1976 school year, effort should be directed toward in-service of secondary teachers, more involvement of the guidance counselors, and direct involvement in the secondary classrooms.

II. BODY OF THE REPORT

A. PROBLEM AREAS

This project is directed toward the problem of developing a model for career education for grades K-14, which can be used by other school divisions as they move toward implementing the total concept of career education in their school program. Such a program must recognize that schools should create bridges between school and earning a living for young people; promoting cooperation between public education and manpower agencies; and broadening occupational aspirations and opportunities for youths, both disadvantaged and advantaged.

Research shows that a fundemental purpose of education is to prepare the young to live a productive and rewarding life. For far too many Americans, our schools are failing in this essential mission.

In typical schools throughout the country, young people complain that curriculums are dull and irrelevant, that their education is not opening pathways to a fulfilling adulthood.

Substantial numbers of students score below their grade level in basic skills; high dropout rates, absenteeism, academic failure, drug abuse, vandalism and assaults on administrators, teachers and pupils signal their discontent.

It is a rare high school that equips all of its students to make the choice upon graduation of entering the job market with a salable skill or of continuing their education. Too often, the graduate has neither option, let alone the opportunity to select one or the other.

Research also indicates that young men and women between 16 and 34 years of age will soon account for about two-thirds of the net increase in the labor force. With so much competition from young people who have higher levels of education, the boy or girl who does not get good preparation for work will find the going more difficult in the years ahead according to a 1970 Labor Statistics Bureau report.

It is know that the country has large manpower resources which can be drawn on to meet its manpower needs--women who want suitable jobs, a greatly underutilized, and sometimes unused, work force of minority groups, and disadvantaged teen-agers in rural and urban areas. The totality of wasted manpower has almost always included, in addition to the unemployed, large numbers of people who have given up the search for work, who no longer have will or purpose. In addition, there are those who are confined to the least desirable, lower paying jobs because of poor education, poor health and discrimination--especially, but not exclusively racial.

Progress in developing the country's human resources will depend, in large measure, upon the educational system. Given the resources, the schools can take on these new tasks. Recognition must be given to the fact, however, that cooperation between public education and manpower agencies similar to those created by the Manpower Development Act (MDTA) of 1962 will assist the schools in trying to meet the new demands thrust upon them.

It follows that if schools are to meet the needs of pupils, there must be a basic restructing of subjects, Grades K-14, around the theme of career development, including emphasis on the opportunities and requirements in the world of work. Schools must also recognize that the basic academic subjects, such as mathematics, science, social studies, and language arts become more relevant when the student is helped to see the relationship to future career goals. All students need the educational experiences and backgrounds that will broaden occupational aspirations and open up new opportunities for building rewarding, future careers.

Dr. Donald E. Super has indicated that schools must recognize that there are career patterns fitting into an on-going hierarchy. Too often educators have stressed occupations not positions. There is a need to emphasize changing occupations and positions.

Young people need to be made aware of the stages of occupations. They need to be given the answer to the question of how do you get in and how do you get out of an occupation. It is relevant that pupils knows where an occupation may lead and to be aware of the "chain of events" leading from educational preparation, up through training, and into the opportunities available on the job.

Schools need to develop sequential experiences in decision-making about careers. These experiences should be integrated into the curriculum of both elementary and secondary schools and they should be appropriate to the grade and age level of pupils as they move through the program of studies. Schools also need to decide what competencies are needed by youth and work toward their development.

B. GOALS AND OBJECTIVES

The specific objectives of this project include:

a. Design and development of a Model Career Education Curriculum K-14 that can serve as an exemplary program that will assist other school divisions to move toward a total career education concept.

b. Increase the self-awareness of students leading to an improved self-concept which in turn would lead to the following:

   (1) Improved pupil attendance

   (2) Reduction in student discipling problems

   (3) Reduction of the division-wide dropout rate

   (4) Reduction of academic failure

   (5) Increase in the percent of graduates continuing education in colleges and institutions other than colleges

(6) Increase the percent of graduates expressed as a percent of the first grade beginning school twelve years earlier

c. Make academic subject matter more relevant to students and raise raise countywide scores on tests evaluating basic skill competencies of our students.

d. Develop favorable student attitudes toward the personal, social, and economic significance of work.

e. Assist each student in developing and practicing career decision making skills.

f. Increase career awareness of pupils in Grades K-6.

g. Develop guidance counselor and teacher awareness and skills through a comprehensive in-service program that will assist in implementing a total career education program.

h. Develop a procedure that will lead to curriculum revision centering around the career education theme.

i. Revise the exploratory course concept in Bedford County Public Schools' Grades 7-8 to relate to the "caree clusters" of the career education concept.

j. Provide job preparation in a wider variety of occupational areas now available to Bedford County Public School Students.

k. Expand opportunities for work-study and cooperative education experiences for pupils.

l. Improve placement services for all exiting students moving toward the goal of placing each in a job or post-secondary occupational or baccalaureate program.

m. Provide for the flexible exit and re-entry of pupils into the educational program.

n. Broaden student opportunities for "beyond-the-school walls" educational experiences including community college credit work.

o. Utilize community and area resources to a greater degree in order to provide more and varied educational experiences for students.

p. Provide job entry skill training for selected disadvantaged students at the ninth and tenth grade levels.

During the 1974-1975 school year, the instructional staff develope a series of objectives for each educational level. These objectives were modified from a list developed in Maryland under their Part D Exemplary Project.

CAREER EDUCATION NOW!
BEDFORD COUNTY PUBLIC SCHOOLS

CAREER AWARENESS

Kindergarten - Grade 2

BEHAVIORAL OBJECTIVES

1. The student will identify some of the different kinds of work people do in the home, school, and community.

2. The student will identify, within his immediate world, several jobs that are related and can be grouped into job families.

3. The student will identify and describe specific tasks within job families familiar to him.

4. The student will recall the many various jobs that he has performed over a period of time.

5. The student will name and discuss hobbies and interests.

6. The student will participate in activities reflecting his identifications with worker roles.

7. The student will identify some of the skills, tools, and materials needed to perform a job.

8. The student will demonstrate his mastery of simply manual and mental skills in the performance of work tasks requiring the use of materials and tools.

9. The student will use primary communication, mathematical and problem-solving skills in classroom activities related to work.

10. The student will role play specific occupations based on his his interests and hero images.

CAREER EDUCATION NOW!
BEDFORD COUNTY PUBLIC SCHOOLS

SELF AWARENESS

Kindergarten - Grade 2

BEHAVIORAL OBJECTIVES

1. The student will identify ways in which he is a distinct individual.

2. The student will give examples of things he likes to do and things he does well.

3. The student will demonstrate that his perception of people may differ from the perceptions held by other.

4. The student will indicate things that he feels are important to him and others in his immediate world and discuss why he thinks these things are important.

5. The student will identify ways he and others make contributions in work and play activities.

6. The student will participate in various activities which will help in expanding interests.

SOCIETY

Kindergarten - Grade 2

BEHAVIORAL OBJECTIVES

1. The student will identify people who are working together toward a common goal and explain how the work of each person contributes to the achievement of that goal.
2. The student will identify those needs of society which various workers fulfill.
3. The student will identify benefits and rewards he receives for his work and from the work of others.

ECONOMICS

Kindergarten - Grade 2

BEHAVIORAL OBJECTIVES

1. The student will discuss why people must work to produce goods and services.
2. The student will identify some of the different kinds of work done in the community.

CAREER EDUCATION NOW!
BEDFORD COUNTY PUBLIC SCHOOLS

TECHNOLOGY

Kindergarten - Grade 2

BEHAVIORAL OBJECTIVES

1. The student will express his creative ability by using tools to construct projects from available resources.
2. The student will demonstrate that the use of a variety of tools and materials can enable him to complete a task.
3. The student will identify and discuss the different ways people use tools and materials in the accomplishment of tasks and the production of products.

CAREER EDUCATION NOW!
BEDFORD COUNTY PUBLIC SCHOOLS

CAREER AWARENESS

Grade 3 - Grade 6

BEHAVIORAL OBJECTIVES

1. The student will cite examples of kinds of work people do outside his immediate experience that directly affect his life.
2. The student will classify workers into occupational areas and characterize them as producing goods or services.
3. The student will illustrate interdependency between various jobs within occupational areas.
4. The student will combine attitudinal, mental, and manual skills in the accomplishment of a variety of jobs.
5. The student will analyze the relationship between the skills, tools, and materials used in doing different jobs.
6. The student will demonstrate his special interests through school or non-school activities.
7. The student will demonstrate that hobbies and interests combine elements of both work and play.
8. The student will provide examples of hobbies that may develop from interests.

CAREER EDUCATION NOW!
BEDFORD COUNTY PUBLIC SCHOOLS

SELF AWARENESS

Grade 3 - Grade 6

BEHAVIORAL OBJECTIVES

1. The student will clarify his values by participating in activities which bring values into conflict.

2. The student will identify his emerging values and compare these beliefs with the beliefs held by most people.

3. The student will draw conclusions about self after performing tasks which are increasingly challenging and compatible with his development.

4. The student will identify and discuss those attitudes and behaviors toward others which help him maintain a good working relationship.

5. The student will identify the persons and things that constitute his environment and affect the way he views work.

6. The student will compare and contrast his interpretation of work environments of specific jobs with the way others interpret these environments.

7. The student will assess the relationship between his developing interests and his abilities.

8. The student will analyze his attitudes and behaviors as they affect his performance in specific tasks.

9. The student will relate his interests and abilities to specific occupational roles.

10. The student will assess his strengths and limitations in terms of the degree to which he can exercise control over them.

11. The student will identify and discuss how an individual may obtain personal satisfaction from his occupation.

SOCIETY

Grade 3 - Grade 6

BEHAVIORAL OBJECTIVES

1. The student will discuss the interaction and interdependency of workers of societal groups.
2. The student will identify and discuss the ways societal groups reward their members for their work.
3. The student will compare and contrast changing customs, traditions, and attitudes as they affect jobs in various societies.
4. The student will compare and contrast the changing needs of society that affect job opportunities.

ECONOMICS

Grade 3 - Grade 6

BEHAVIORAL OBJECTIVES

1. The student will examine how the work of many men has made possible a continuing increase in goods and services produced in our country.
2. The student will compare and contrast the economic incentives of our system with those of various cultures.
3. The student will examine plans and choices he and others must make to use available resources effectively, both as consumers and as producers.
4. The student will compare job opportunities today with those of the past in terms of the economic growth of our country.
5. The student will investigate how different people have provided for their basic economic needs and wants.
6. The student will investigate economic conditions which affect the number and variety of jobs available.
7. The student will identify geographical factors, i. e. climate, topography, resource, location, etc., and discuss how they affect work.
8. The student will investigate the reasons people change jobs.

CAREER EDUCATION NOW!
BEDFORD COUNTY PUBLIC SCHOOLS

TECHNOLOGY

Grade 3 - Grade 6

BEHAVIORAL OBJECTIVES

1. The student will integrate his general studies and relate them to technology.

2. Students will identify and discuss jobs that have appeared as a result of technological developments.

3. The student will construct imaginary accomplishment in technology that he would like to see occur and assess their implications for man's work and leisure time.

4. The student will compare and contrast technology used by various cultures to satisfy needs and desires.

5. The student will construct projects and discuss the technology needed to complete the task.

6. The student will make his creative ideas materialize through the use of technology and resources.

BEDFORD COUNTY PUBLIC SCHOOLS

CAREER (7-9)

BEHAVIORAL OBJECTIVES

The student will participate in a variety of work experiences (simulating, working, observing) in broad occupational areas and analyze these experiences in terms of a future career choice.

The student will, after exploring several occupational areas, demonstrate a number of the basic skills needed in the performance of certain jobs.

The student will make tentative occupational choices in terms of his interest, capacities, and values.

The student will demonstrate kinds of work that involve working with people, working with ideas, and working with things.

The student will explore a wide range of careers as they reflect his interest and abilities.

The student will cite the advantages and disadvantages of a variety of careers in terms of his interests and abilities.

The student will classify jobs into clusters on the basis of the skills and interests of the workers.

The student will compare and contrast the basic-education requirements of several career areas.

The student will evaluate his level of proficiency in basic learnings and its relationship to a career.

The student will select courses which will increase his proficiency in basic learnings.

The student will identify and select the school subject which contain the specific knowledge required for his tentative vocational choice.

The student will analyze the skills and processes related to various hobbies and interests which may influence career choice.

The student will evaluate the economic rewards obtainable through the pursuit of hobbies or interests.

BEHAVIORAL OBJECTIVES

The student will identify and evaluate his self characteristics which will help him in terms of the occupation he thinks he may wish to pursue.

The student will analyze his abilities and interests in terms of occupational areas he may wish to enter.

The student will demonstrate an understanding of his interest and abilities through his course selection and work performance.

The student will identify and practice attitudes and behaviors which generally apply to any work situation.

The student will analyze the working environment of various occupations and evaluate his attitudes toward these work environments.

The student will analyze the changes which have taken place in his value system as he moves toward maturity.

The student will give examples of significant values inherent in various occupational areas.

The student will explore the possible ways in which his contribution to the world of work may be most effective.

The student will identify how others contribute to the world of work.

The student will assess his self characteristics in terms of various occupations.

The student will give examples of interpersonal relations of workers that affect cooperative performance on a job and assess his ability to work in a similar situation.

BEHAVIORAL OBJECTIVES

The student will differentiate between broad occupational areas in terms of the contrubution to our society.

The student will analyze how the customs, traditions, and attitudes of society affect jobs in broad occupational areas.

The student will analyze how societal needs create a demand for workers in various occupational area.

The student will analyze the relationship between the benefits provided by society and the work performed by the members of the society.

The student will investigate the protective laws of several broad occupational areas.

24

BEHAVIORAL OBJECTIVES

The student will discuss and generalize that work in various occupational areas contributes to the nation's wealth which can be measured in terms of goods and services produced annually.

The student will explore the economic incentive offered by various occupational areas.

The student will identify and analyze the characteristics of the American economy that affect job opportunity.

The student will analyze economic decisions and choices made as a participant in either economic simulations or actual situations.

The student will explore how economic needs and wants differ and are provided for by the rewards of various occupational areas.

The student will investigate the geographical factors that affect various occupational areas.

BEHAVIORAL OBJECTIVES

The student will explore the technology of various occupations and evaluate the benefits which have accrued to man.

The student will use the technologies of several broad occupational areas in a simulated or an actual work situation, relating them to the satisfaction of man's needs and desires.

The student will analyze various jobs in broad occupational areas to see how technology has changed them.

The student will evaluate the impact of technology on work and leisure time.

The student will examine and evaluate technology in terms of the factors which give impetus to change and development.

The student will assess the degree to which the technology of various occupational areas is being used to the advantage of mankind.

The student will analyze the problems associated with the use of technology and research the proposed solutions to these problems.

BEHAVIORAL OBJECTIVES

The student will evaluate how the career area of his choice will provide for his economic needs and wants and affect his standard of living.

The student will assess the extent to which economic characteristics may affect job opportunities in the career area of his choice.

The student will identify and evaluate the economic incentive available in a career area in terms of his goals.

The student will evaluate a career area in terms of its contribution to the nation's productivity.

The student will evaluate his application of economic concepts in making choices and decisions as a consumer and/or producer.

The student will evaluate his career choice as it is affected by geographical factors.

BEHAVIORAL OBJECTIVES

The student will formulate a personal definition of work.

The student will make projections of work people may some day be doing.

The student will select educational and training programs in terms of his needs, interest, abilities, and values that will assist him in converting vocational preference into reality.

The student will analyze his vocational choice and the possible careers which he might pursue in terms of his interest, abilities, and chances for success.

The student will analyze the degree to which hobbies and interests affect his present career choice.

The student will analyze the career hierarchy which reflects his vocational choice.

The student will meet the requirements for successful completion of his basic course work for job entry or further education.

The student will apply basic learnings in a work situation and analyze their effects upon his job performance.

The student will evaluate his proficiency in the specific skills related to his career interest.

The student will demonstrate basic vocational skills which will qualify him for an entry level job or for further education in an occupational area of his choice. (Standards of quality - Virginia)

The student will participate in a realistic work situation as part of the school program or as a worker in the community.

The student will evaluate his career choice in terms of his work experience.

The student will project his needs for vocational retraining in relation to job advancement, job change, and job less.

The student will interpret occupational trends and evaluate his transferable skills and knowledge that will facilitate retraining.

28

BEHAVIORAL OBJECTIVES

The student will use resources, technology, and his creative ability to investigate and develop a project related to the career area of his interest.

The student will explain how the forces of resources, technology, and creative ability interplay in the career area of his interest.

The student will employ the technology of his career interest area and assess its contribution to the satisfaction of man's needs and desires.

The student will evaluate the extent to which technological change may affect the employment opportunities and the task requirements of the career area of his interest.

The student will make inferences about how technology may affect his work and leisure time in the career area of his interest.

The student will analyze the development of technology in the Twentieth Century in terms of its escalation.

The student will investigate how the technology of his career area can be more efficiently used to contribute to man's well being.

BEHAVIORAL OBJECTIVES

The student will analyze the effects on a society when the workers of an occupational area withhold their services, and debate the justification for such actions.

The student will explore the effect of changing customs, traditions, and attitudes in relation to his chosen career area.

The student will assess how future societal needs may affect vocational opportunity in the career area of his choice.

The student will evaluate the laws society has enacted for his protection as producer and consumer of goods and services.

The student will make a critical analysis of the reward structure of an occupational area as it relates to the reward system of the larger society.

BEHAVIORAL OBJECTIVIES

The student will evaluate his attitudes and behaviors and their effect on his functioning in his work situation.

The student will demonstrate the attitudes and behaviors which enable him to obtain and hold a job.

The student will project a career plan which will reflect his abilities and interests.

The student will analyze the ways his self concept affects his entrance and performance in a work situation.

The student will develop a profile of the working environment of his career choice.

The student will evaluate the role that his values play in making his career decisions.

The working student will analyze his contribution to a specific work situation.

The student will evaluate his individual contribution as it affects future career choice.

Those students involved in work experience programs will conduct an evaluation of self-characteristics using as a basis his cummulative work experiences and analyze this evaluation in terms of future implications.

The student will observe the interaction of co-workers in situations which call for cooperation and determine any changes he might need to make in order to work effectively.

The student will analyze how his perception of other people affect his ability to work cooperatively.

C) DESCRIPTION OF THE PROJECT DESIGN

Virginia public high schools sent 70% of its graduates to institutes of higher education during 1973-1974; of this group, it is estimated that only 13% will continue through until completion of a two or four year program. Thus, 61% of our graduates will leave formal education, with a high school diploma and less then satisfactory job skills. The fault lies with education, society and the students themselves. Career educational priorities, societal demands and student attitudes reflect more realistic career options for all students.

Career Education Now! is directed towards the problems faced by students in Bedford County Public Schools, Bedford County, Virginia, a rural-urban school district located in Southwest Virginia. Those problems and many of their solutions, may well be applicable to other similar school districts in the nation.

Career Education Now! has attempted to prepare students for meaningful career decisions in three areas:

1) Awareness of career opportunities
2) Exploration of career opportunities
3) Preparation for job entry

1) Awareness

Students in grades kindergarten through seven experience a sequence of learning activities through normal classroom teaching - learning processes. Career Education Now! has provided resource persons for the elementary schools who function as career activity coordinators, elementary counselors, and in-service leaders.

The resource person for a school obtains audio-visual materials from the central office, offers suggestions as to teaching strategies and assists in developing new ideas. Coordination of community resources is a primary responsibility.

A teachers activity guide for grades kindergarten through seven provides infused career suggestions for each grade level in all curriculum areas.

2) Exploration

Students in grades seven through twelve participate in a program of exploration coordinated by the classroom teacher, counselors and the work experience coordinator.

Teacher centered activities are through exploratory courses in the following job-career areas:

a) masonry
b) electricity
c) agriculture
d) foreign languages
e) careers clusters
f) homemaking related careers
g) office related careers

Counselor initiated activites include group guidance programs about limited interest areas, job fairs, and individual counseling. Each secondary school has been equipped with materials to set up a career center; this has been accomplished at Liberty and Jefferson Forest.

The work experience coordinator has set up a program for seniors that allows them to leave the school setting and work for a short period in a field of their choice. During the 1974-1975 school year, over 75 seniors participated directly in this program; well over 300 students were involved in some form of work experience.

Preparation

During the 1975 session of the Virginia Legislature it was mandated that by 1976-1977 school year 90% of all graduating seniors will have a job entry skill.

Job preparation in Bedford County Public Schools involved the following courses:

Agriculture - 5 years
Cosmetology - 2 years
LPN - 2 years (Including one year past grade 12)
Health Assistants
Masonry
Carpentry
Electricity
Electronics
Clerk Typist
Stenography
Accounting
Food Services
Clothing (Occupational)
ICT
DE
Manufacturing

Also funded by Career Education Now! is a job preparation class for potential dropouts that gives each student an entry level skill and academic course work to compliment this skill training.

Another major problem in the implementative of a comprehensive career education program is retraining teachers and other professionals to accept the philosophy of career education.

Teacher in-service is accomplished through three avenues:

1) In-service group programs
2) In-service via instructional television
3) In-service - one-to-one

In-service group programs involved presenting overall #goals and objectives and introductory methods of general interest. (See Appendix A)

In-service via instructional television involves fifteen 30-minute color television programs developed in Bedford County that provides more involved information on career development theories, actual class observations, and demonstrations. These programs are available for local staff development on 3/4 inch video cassettes, and for other school systems via WBRA-TV channel 15. See Table I for a listing of program titles.

In-service one-to-one involves in the class assistance given to teachers by the career resource persons. This assistance may be demonstration teaching of a lesson, or assistance in developing a new idea for presentation or even assistance in selection of appropriate teaching strategies and materials.

During the 1974-1975 school year, over 90% of all teachers were involved in developing materials and teaching strategies and classroom demonstration. All instructional staff members were involved in at least five hours of career related in-service.

The class for disadvantaged youth held 23 potential dropouts in school in order to prepare them with an entry level skill in a job field of their choice.

Bedford County teachers developed a guide of activities for grades kindergarten through seven and have made plans for writing a curriculum for all grades to include career related activities in all fields of study.

TABLE I

CAREER EDUCATION VIDEO TAPES:

K - 3 For Students:

1. Introductory Program I - The Day Nobody Went To Work
   (Introduces the series on career awareness by stressing the importance of people working)

2. Construction I -
   (carpenter, plumber, electrician, mason, drywaller, contractor, bulldozer operator, etc.)

3. Agri-Business and Natural Resources I
   (farmer, distributor, delivery man, lab technician, etc.)

4. Hospitality and Recreation I -
   (motel manager, housekeeper, cashier, park ranger, maintenanceman, receptionist, housekeeper, cashier, etc.)

5. Marine Science I -
   (commercial fisherman, crabber, salesman, distributor, etc.)

6. Transportation I -
   (pilot, stewardess, train conductor, bus driver, taxidriver, traffic controller, dispatcher, brakeman, ground crew, etc.)

7. Manufacturing -
   (furniture industry workers, designer, lumberyard workers, etc.)

8. Communication and Media I -
   (disc jockey, newscaster, sports director, artist, photographer, technician, and engineer)

9. Personal Service I -
   (beauticians, barbers, hairstylists, and shampoo girls)

10. Public Service I -
    (policeman, fireman, postman, meter maid, etc.)

11. Agri-Business and Natural Resources -
    (forester, florist, warden, greenhouse worker, etc.)

12. Health Occupations I -
    (nurse, doctor, health aides, receptionist, medical technologist, and volunteer help)

13. Environment I -
    (laboratory technician, field engineers, physical scientist, etc.)

14. Business and Office I -
    (secretary, typist, file clerk, receptionist, bookkeeper, and manager)

35

15. Marketing and Distributing I -
(salesperson, buyer, distributor, warehouse worker, and department store workers)

16. Fine Arts and Humanities I -
(actor, dancer, minister, music director, actress, artist, youth activities director, etc.)

17. Public Service Workers I-A-
(Teacher, principal, school nurse, bus driver, custodian, secretary, cafeteria workers, etc.)

18. Personal Service I-A
(veterinarian, surgical nurse, anesthetist, receptionist, bookkeeper, X-ray technician)

19. Transportation I-A
(Storemanager, salesman, mechanic, repairman, all workers related to cycle/business)

20. Consumer and Homemaking I -
(homemaker, delivery man, upholsterer, dietician, fashion designer, interior decorator, chef, and chauffeur)

CAREER EDUCATION VIDEO TAPES

4-6 For Students:

1. Sammy Space and His Earth Adventures-
   (technician, truck, drivers, dentists, postal workers, hair-stylist, reporters, editors, typesetters, forester, etc,; introduces the 4 - 6 series on Career Education)
2. Transportation II -
   (assembly line workers, car dealer, auto mechanic, sales people, engineers, test drivers, etc.)
3. Hospitality and Recreation II -
   (sports instructor, teachers of handicapped, golf athletes, recreation facility attendant)
4. Personal Service II -
   (Different workers in child care: teacher, aide, volunteer helpers, etc.)
5. Hospitality and Recreation II-A
   (steward, baker, chef, pastry cook, executive chef, golf pro, and swimming instructor)
6. Fine Arts and Humanities II -
   (gymnastic instructor, dancing teacher, school psychologist, etc.)
7. Health Careers II
   (Dental Assistant, Dentist, etc.)
8. Environment II
   (Life scientist, ecologist, technicians, dispatcher, environmental engineers, etc.)
9. Communications II -
   (artist, photographer, newspaper reporter, linotype operators, photogravers, pressmen, dye cutter, etc.)
10. Public Service II -
    (armed forces and civil service workers, Coast Guard, etc.)
11. Construction II -
    (residential construction workers, apprentices, cement mason, crane operator, contractor, steelworker, civil engineer, etc.)
12. Agri-Business and Natural Resources II -
    (Hog farmer, heavy machine operator, farm manager, food inspector, packing house workers, etc.)
13. Marine Science II -
    (Marine scientist, oceanographers, computer operator, draftsmen, Illustrator, photographer, etc.)

14. Manufacturing II -
(Workers involved in process of paper making: quality control, inspector, engineer, loggers, lumbermen, machine operators)

15. Construction II-A
(Workers in building of a rapid transit system: consultant, surveyor, carpenter, engineer, electrician, iron and steel workers, etc.)

16. Marketing and Distributing II -
(truck driver, wholesaler, retailer, platform worker, dispatcher, and office worker)

17. Consumer and Homemaking II
(decorating consultant, seamstress, drapery installer, carpet installer, and upholsterer)

18. Business and Office II -
Congressman, receptionist, caseworker, administrative assistant, and secretary)

19. Manufacturing II-A
(Inspectors, shipping handlers, accountants, dye maker, line machine workers, public relations worker, mining engineer, and excavators)

20. Health Careers II-A
(Dietician, physical therapist, programmers, registered nurse, licensed practical nurse, social director, pharmacist, etc.)

CAREER EDUCATION VIDEO TAPES

7th and 8th Grade For Students:

1. How To Get A Job (English or Social Studies)
   (Introductory Program describes preparations necessary for securing employment, i. e., obtaining social security card, work permit, physical exam, etc.)

2. Health Careers (Health or Science)
   (Health Administrator, pathologist, X-ray Technician, Physical therapist, lab technician, nurses)

3. Communications (Social Studies or Language Arts)
   (Emphasis on careers with telephone company: receptionist, employment manager, telephone operator, coin collector, frameman, lineman, cable splicer)

4. Fine Arts and Humanities (Art)
   (Designer, art director, weaver, potter, commercial artist)

5. Public Service (Science)
   (Glimpse into world of space: space scientist, geologist)

6. Business and Office (Math or Social Studies)
   (Focuses on banking: interviewer, proof machine operator, teller, bookkeeper)

7. Environment (Social Studies and Science)
   (Jobs with power company: key punch operator, computer operator, meter service installer, barge unloader operator, lineman, customer service representative, planner, service co-ordinator, meter reader)

8. Public Service (Social Studies or Health)
   (Emphasis on police work: recruits, dispatcher, juvenile officer, probation intake officer, counselor)

9. Personal Service (Industrial Arts Class)
   (Auto mechanics with emphasis on pit crew, mechanics, service station attendant, apprentice, etc.)

10. Transportation (Social Studies)
    (Jobs with railway system: carman, foundry worker, welder, car designer, lab technician, engineer, administrator, spectographer, supervisor)

D. RESULTS AND ACCOMPLISHMENTS

During the 1974-1975 school year, Career Education Now!... expanded its operation from the primary, elementary, work experience areas into the middle school and a special class for academically disadvantaged high school students.

Curriculum materials for the disadvantaged class were developed that centered on career planning and decision making activities.

The procedures for the work experience program were defined and expanded to encompass the entire senior class in Bedford County, Virginia.

The elementary teachers' activity guide, developed during the first year funding, was revised and evaluated by teachers during the second year. The guide is being distributed to all elementary teachers as a two volume loose-leaf notebook. Additional copies of the guide are available on request.

During the second year of funding, research was done and a proposal developed and submitted to the U.S. Office of Education for funds under P.L. 93-380 to increase the overall effectiveness of the career education program. This proposal was accepted and funded for one year at $99, 450.00. This new grant will enable Bedford County Public School to increase its efforts in the middle school secondary, and in-service areas.

Utilizing the U.S. Office of Education Career Education Implementation Categories, it was assertained that Bedford County Public Schools was on level three and progressing towards level four.

Baseline data has been developed by IBEX, Inc. for use during the third year of the project.

46

E. EVALUATION OF THE PROJECT

The evaluation, developed by IBEX, Inc., is bound as a separate volume following.

F. CONCLUSIONS, IMPLICATIONA AND RECOMMENDATIONS

Success has been attained at the elementary, middle school, and work experience areas; more work is needed at the secondary and in-service areas.

The typical in-service for the first two years of the project has involved in-school workshops, or release time workshops; during the 1975-1976 school year, a college level course in career education is needed to encourage teachers to develop activities and ideas in career education.

Renewed effort to involve the community and businesses in the planning for career education is needed. During the 1975-1976 school year, a new revised advisory counsil is needed. Increased efforts at dissemination in and out of state will be done during the school year.

TITLE: PROFESSIONAL DEVELOPMENT IN VOCATIONAL TEACHER EDUCATION.

DESCRIPTOR: *EDUCATIONAL NEEDS; *TEACHER EDUCATION; *VOCATIONAL EDUCATION TEACHERS; *GUIDELINES; EDUCATIONAL POLICY; TEACHER IMPROVEMENT; STAFF IMPROVEMENT; *PROFESSIONAL EDUCATION; HIGHER EDUCATION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 81P.

ABSTRACT: THIS REPORT TO THE CALIFORNIA STATE BOARD OF EDUCATION IS THE RESULT OF A PROJECT TO ENCOURAGE VOCATIONAL TEACHER EDUCATION EXPANSION IN QUALITY, QUANTITY, AND DIVERSITY TO MATCH THE EXPANSION IN VOCATIONAL EDUCATION AND MANPOWER DEVELOPMENT. APPROXIMATELY 200 PERSONS ATTENDED A SERIES OF SEVEN MEETINGS HELD IN VARIOUS LOCATIONS THROUGHOUT THE NATION. THE PARTICIPANTS, REPRESENTING A CROSS-SECTION OF FEDERAL, STATE, LOCAL, AND PROFESSIONAL GROUPS IN 49 STATES AND THE DISTRICT OF COLUMBUA, FOCUSED THEIR DISCUSSIONS ON FOUR MAJOR AREAS: THE WAYS AND MEANS OF EXPANDING VOCATIONAL TEACHER EDUCATION, IDENTIFICATION OF SPECIFIC PROCEDURES TO BE USED TO IMPROVE THE EFFECTIVENESS OF TEACHER EDUCATION, THE KINDS OF RESOURCES NEEDED TO IMPROVE AND EXPAND TEACHER EDUCATION, AND THE ROLE OF THE AMERICAN VOCATIONAL ASSOCIATION IN VOCATIONAL TEACHER EDUCATION. INTENDED FOR TEACHERS, LOCAL SCHOOL DEPARTMENTS, FEDERAL AGENCIES, TEACHER EDUCATION INSTITUTIONS, AND ALL PERSONS WHO HAVE AN INTEREST IN VOCATIONAL TEACHER EDUCATION, THIS REPORT CONSISTS OF SPECIFIC SUGGESTIONS FORMULATED BY THE PROJECT PARTICIPANTS. THESE STATEMENTS ARE ARRANGED UNDER THE FOLLOWING HEADINGS: FOUNDATIONS, ROLES, TASKS, AND RESPONSIBILITIES OF TEACHER EDUCATION INSTITUTIONS AND LOCAL, STATE, AND FEDERAL AGENCIES; AND THE IDENTIFICATION OF WAYS AND MEANS OF EXPANSION AND IMPROVEMENT. APPENDED IS THE LIST OF PARTICIPANTS. (AUTHOR/RG)

Office of Education
Bureau of Education Personnel Development
Vocational Education Personnel Branch

by the

Division of Vocational Education
University of California
Los Angeles, California

in cooperation with the

California State Department of Education

1972

FOREWORD

The major goal of this project was to encourage vocational teacher education expansion in quality, quantity, and diversity to match the expansion in vocational education and manpower development. The project was designed for the assessment of need, improvement of effectiveness, definition of quality accountability for vocational teacher education, and professional development of teacher educators. In short, teacher education must rise again to a consciousness level in all planning aspects of vocational education.

Seven meetings were held in various locations throughout the nation. Approximately 200 people from 49 states and the District of Columbia participated in the discussions of teacher education. They represented all of the vocational education service areas, all levels of teaching and administration, teacher education institutions, business and industry, and the National Advisory Council on Vocational Education. Never before has such a diverse group been assembled to produce a consensus about the multi-faceted concerns of professional development in the area of vocational teacher education.

For purposes of simplicity, the term "vocational education" is used as a generic term to include all facets of vocational, technical, practical arts, and manpower programs as these are related to teacher education and professional development.

The project had its origin in the AVA Teacher Education Department meeting, Washington, D.C., March 1970. The project was funded under the provisions of Part F, Section 553, EPDA, and was assigned to the State of California for management. Subsequently, Mr. Wesley P. Smith, California State Director of Vocational Education, requested that the Division of Vocational Education, University of California, direct the project.

Dr. George L. Brandon acted as the chief consultant for the entire project. Dr. Nancy A. Graham and Dr. Floyd M. Grainge represented the AVA Teacher Education Department as consultants. Many other persons have provided inputs to this study, including the EPDA doctoral candidates at UCLA. Miss Nancy J. Goff, administrative assistant, Division of Vocational Education, University of California was concerned throughout the study with general meeting arrangements and was responsible for the final editing of the report.

Melvin L. Barlow

INTRODUCTION

The quality of vocational education depends in a very large measure upon the quality of vocational teacher education. The old idea that the vocational education program is no better than the teacher, or the coordinator, or the supervisor, or the administrator is relevant in the context of contemporary vocational education programs. If quality is lacking at the point where the teacher and the student interact, then no amount of expertise, money, or facilities can make up for the lack of teacher quality. It is accepted as axiomatic that the teacher is central to the learning process. Where there are good teachers, there are good vocational education programs; where there are poor teachers, vocational education programs flounder or fail. The urgent necessity for vocational education to provide increasing support and concern at the instructional level is not a debatable item.

Emergence of the new legislation, with its broad concepts and its operational flexibility, must give rise to the emergence of new, or re-established concepts of teacher education. Need for a new unity among teacher educators of all branches of vocational education is imperative. One step in achieving this unifying element is to join forces to produce a pattern of basic ideas for teacher education. The notion of a vocational teacher education platform, suggestive of a body of basic principles, is unique in the contemporary generation of vocational teacher educators, but the idea was rooted deeply in the formative stages of vocational education more than a half century ago.

Foundations

The practice of providing teacher education for vocational education teachers varies widely among the states, and among the various vocational education services. Despite such variations, all of the teacher education programs appear to have been developed from a belief in, or a concern about, certain underlying principles or foundation elements of teacher education. An opinion that such principles exist arises from observations that commonalities in the practice of teacher education may be found among the states and vocational education services. It seemed important, therefore, in this study of teacher education to attempt to isolate a number of these common areas of agreement and identify them as foundations essential for a quality program of teacher education.

In this era of massive change and development in vocational education, national agreement upon foundation elements of teacher education seemed to be imperative. Such foundation elements should not be dependent on any geographical influences nor should they rely on the nature of any vocational education service area. Accordingly, a portion of this report is related to the foundations of teacher education.

Roles, Tasks, and Responsibilities

In addition to a search for foundation elements of contemporary teacher education, the second major thrust of the national study was to consider in detail the basic question of who is responsible for teacher education. Despite the assertion that teacher education is fundamental in vocational education, a strong feeling exists among teacher educators that professional development programs for teachers have a low priority in the hierarchy of vocational education concerns.

Apparent problems related to priority relationships possibly occur because of the lack of clear-cut allocation of responsibility for teacher education. Mindful of the history of vocational teacher education on the one hand, and the contemporary directions of vocational education on the other hand, it seemed reasonable to define the responsibility. Therefore, the study sought to identify specific roles, tasks, and responsibilities for the local area, the institutional area, the state area, and the federal area.

Improvement and Expansion

The Education Professions Development Act (EPDA) does not include specific suggestions about how to achieve improvement and expansion of vocational teacher education, yet the need for such information on a national basis is highly desirable. The national study of teacher education raised four basic questions for discussion. The first question dealt with the ways and means of expanding vocational teacher education. The second sought to identify specific procedures to be used to improve the effectiveness of teacher education. The third question considered the kinds of resources needed to improve and expand teacher education. The fourth sought identity for the role of the American Vocational Association (AVA) as the principal professional organization with concerns for teacher education and leadership development in vocational education.

No attempt was made to give emphasis to any geographical area or vocational education service area. The intent was clearly general in nature and the application hoped for was universal. A section of this report deals with a consensus related to expansion, improvement, resources, and the AVA role.

8

FOR WHOM IS THIS MATERIAL PREPARED?

It is intended for all persons who have interest in, or concerns about, vocational teacher education. In assessing attitudes and opinions about teacher education, extreme care was taken to seek points of view from a wide cross-section of the American public--federal, state, local, institutional, and professional groups. Leadership was sought from teachers to superintendents, and from business to the lay public.

WHO CAN USE IT?

- Local school departments and teachers.
- Regional or county groups.
- Vocational teacher education institutions.
- Labor and management groups.
- State Departments of Education.
- Chambers of Commerce.
- Industry-Education Councils.
- National, state, and local professional organizations.
- National and State Advisory Councils.
- Federal Agencies.

HOW CAN IT BE USED?

The material contained in this report represents a consensus of the considered judgment of a large cross-section of people involved with vocational teacher education.

- The section on FOUNDATIONS can be used to determine the extent to which state or institutional programs possess these foundation items.

- The section on ROLES, TASKS, and RESPONSIBILITIES can be used by institutional, local, state, and federal groups as check lists to match present programs and to plan ahead to achieve new levels of performance in teacher education.

- The section on IMPROVEMENT and EXPANSION contains a variety of ideas which can be used in part by any group to secure exemplary programs of teacher education in vocational education.

WHY?

- Growth in vocational teacher education has not kept pace with the general growth of vocational education.

- Vocational education, with a renewed emphasis upon Career Education, requires that attention be given to a massive program of in-service education, and to new and innovative ways and means of recruiting and training teachers.

- In the final analysis it is only through the teacher that substantive progress can be made in vocational education.

FOUNDATIONS

The items that follow represent characteristics essential for quality in vocational teacher education, and are generalizable to the extent that application can be made in any state.

Teacher educators should exemplify the competencies which they are endeavoring to develop in their students.

Teaching is an art as well as a science and is developed through practice. A teacher of teachers, to attain maximum results from his efforts, must have taught effectively. To a great extent teachers teach they way they were taught rather than the way they were told to teach. Teachers of vocational-technical education emulate those whose teaching patterns are recognized as sound and effective. The concept of the "master teacher" should be given priority in the selection of teacher educators.

Vocational teacher education programs should incorporate principles of career development for vocational teachers.

Career development has been left up to the individual teacher with little or no assistance from anyone about his career objectives. The responsibility of teacher education should span the entire career of the vocational teacher. Guidance and assistance of all kinds should be provided, and efforts made to urge the teacher [illegible]elop a career plan which can provide mobility into other levels of education or into other disciplines, but should not be limited to graduate courses and certification requirements. We cannot wait for the cream to rise to the top; we must provide motivation to assist the process. This responsibility falls legitimately within the province of teacher education.

Teacher education programs should have the responsibility of certifying the occupational competency of teachers.

Teacher education and occupational competency of teachers are elements in the same series. These two important elements should not be administered separately.

Certification standards and teacher education standards should be coordinated.

Teacher certification requirements and teacher education programs are both directed toward the end of producing the competent teacher. Responsibilities for these elements should not be considered as separate entities; changes in certification requirements should be reflected in the teacher education program.

Vocational teacher education should prepare teachers who can adjust instruction to accommodate a variety of student groups.

Student populations such as secondary, adult, handicapped, normal, vocational talented, exploratory, require different teaching skills. Yet, this has not been fully recognized by the teacher education profession and too frequently all teachers are produced from the same mold. Teachers must be prepared with the appropriate skills, knowledges, and understandings to assure success when working with the many and varied target populations as identified by the Vocational Education Amendments (VEA) of 1968.

Teacher education programs should maintain flexibility to meet unexpected needs.

The principle of flexibility, as embodied in the Vocational Education Amendments of 1968, applies to teacher education. Flexibility in teacher education is necessary to meet the unique requirements of innovative programs in vocational education.

Teacher education programs should be open to business and industry training personnel and to others employed in training in the public and private sectors.

Teacher education programs should make a special effort to invite representatives from business and industry to participate in teacher education classes. The scope of teacher education is broader than the in-school vocational class; teacher education should prepare instructors for business and industry.

Teacher education program improvement should be a continuous process.

Every teacher education program should have a built-in plan of evaluation in order to keep the program up-to-date. New relationships between teacher education and business and industry must be developed. The teacher education program must be continually adjusted in accord with research findings and must also be accountable for preparing competent instructors.

Each state should develop a master plan for providing pre-service and in-service vocational teacher education.

The plan should provide, in a systematic and logical manner, for the quantitative and qualitative teacher needs. The plan should also provide for a statewide teacher education coordinating committee to bring together all segments of vocational teacher education.

In-service education of teachers should be a continuous responsibility of vocational teacher educators.

In-service education of teachers must be recognized as a responsibility of teacher education. Vocational teachers do not have much opportunity to keep up-to-date in their occupational fields and little chance to learn about new instructional processes. Teacher educators must provide institutes, workshops, and special intensive upgrading programs throughout the year.

Teacher recruitment should be a function of the teacher education program.

Recruitment of new teachers has not been considered a basic part of the teacher education program; however, in view of the needs for larger numbers of teachers, it is strongly recommended that teacher education programs assume the responsibility of developing relationships with business, industry, management, labor and the community at large in order to develop a supply of new teachers.

"Follow-up" of teachers is a basic responsibility of teacher education.

Teacher educators must be sensitive to what happens to teachers after they complete the teacher education program. Feedback is highly important and should reflect the problems of the teacher on the job and the attitudes and impressions of administrators concerning teacher competency. Teacher education--its courses, its practicums, its seminars, and all other experiences included in the scope of teacher education--must be updated on the basis of the teacher's performance and ability to adjust to the changing circumstances of instruction. Systematic feedback data will indicate needed adjustments in teacher education.

Teacher education program activities should utilize differentiated staffing.

A small full-time teacher education staff, with a large number of highly qualified part-time assistants, can add much to the quality of teacher education in general. The resources of a larger area of education, business, and industry should be available to the teacher education administrator to provide diversity in teacher education.

Reciprocity should exist among institutions and states whereby credit may be granted for similar courses and experiences.

Reciprocity should be arranged among institutions and states to provide credit for similar courses, curricula, or experience requirements. Plans for reciprocity will prevent repetition of courses previously completed elsewhere.

Teacher education programs should utilize actual instructional environments.

Teacher education programs are frequently conducted apart from the school environment in which the teacher works. The teacher is exposed to appropriate theory and procedures, but must translate this information to his actual teaching situation. It is not feasible to duplicate each teacher's environment, but it may be possible to conduct some programs in an actual school setting. This basic quality element, which tends to add relevance to teacher education, stems from the theory that the student learns best in work-like situations--the closer to the real thing, the better.

Research, innovative experimentation, and cooperation in exemplary programs should be viewed as integral to the vocational teacher education function.

Teacher education should serve as a catalyst for: (1) innovations in curriculum; (2) updating knowledge and competency in teaching methods; and (3) conducting and evaluating experiments and pilot endeavors. The teacher educator, commonly located on a university campus, is in an advantageous position to be informed about and to coordinate new ideas resulting from research which could lend itself to more effective teaching programs and practices.

Teacher education should continue to promote and encourage allegiance to the profession of teaching.

One of the key roles of teacher education in vocational education is the development of an attitude of educational professionalism. This attitude should not be envisioned as a neat containerized mold into which every teacher must fit, but rather a realization of a role of teaching as a profession and of colleagues as professionals. An oversimplification of the "professional" is one who is recognized by the profession. To claim such distinction, it is obvious that vocational-technical teachers must reflect the ideal and not be viewed as second rate. Vocational teachers must belong to professional organizations, take part in state and national activities, and perform in the classroom at a level that commands the respect of their students and colleagues alike.

Effective teacher education programs are dependent in a large measure upon cooperative leadership in teacher education among federal, state, local, and institutional jurisdictions.

The federal government has its responsibility--the providing of funds and the evaluation of the effective use of these funds. It also provides the national coordination which is extremely essential to all states. Local education agencies are the purchasers and consumers of the products of the colleges and universities. They are the ones who will experience success or failure in teaching situations dependent, to a great extent, on the quality of teaching provided. It is their needs, which reflect student needs, that are the primary factors in developing teacher preparation programs. With the colleges and universities responsible for the preparation of teachers needed by local education agencies, community colleges, and technical colleges, and the federal government providing the national coordination for all teacher preparation, it is essential that the state play a vital role in coordinating all these efforts.

Vocational teacher education should receive high priority as an integral part of the total national and state teacher education efforts.

Vocational teacher education is uniquely tied to changes in technology. Consequently, a teacher-learning environment for vocational-technical education must be far different from that required for the normal classroom teacher. A technology-resource center should be provided within a vocational teacher education program, either on a state or regional basis.

Teacher educators should be included in the initial phase of vocational education program planning.

Program planning invariably takes place without any concern whatsoever for the teacher, his present competencies, and his future needs. It must be expected that innovative and exemplary programs of vocational education will require changes in teaching. Special teacher institutes, seminars, or short-unit classes may need to be planned so that the teacher is "on-board" and "in tune" with the contemplated changes. This involves much more than merely informing the teacher about new changes; it must supply the teacher with the necessary tools to accomplish the intended task. It is impractical to believe that all teachers, because they are teachers, will be able to adjust automatically to all new instructional patterns--some planning is necessary.

Teacher educators should develop, test, and apply evaluative criteria for teacher education.

Teacher educators must be aware of the strengths and weaknesses of their programs and should adopt some system for continuous evaluation of the program.

Teacher educators should provide service courses in the history, principles, and practices of vocational and career education for other school personnel and for the lay public.

Much of what educators in general and the public at large know about vocational education is false. Educators have little opportunity to understand the mission of vocatioanl education. Service courses should be available in regular undergraduate, graduate, extension, or other in-service programs for anyone who wants to learn about vocational

19

education. The intent of such courses is to provide a basic introduction to vocational education theory and practice. Such courses, when available, must be promoted (advertised) in such a way as to become attractive to teachers and administrators in training, to experienced teachers, and to representatives of business, industry, and the lay public.

Program operation of vocational teacher education should be the responsibility of professional vocational teacher educators.

Professional teacher education is a career that should occupy the full-time attention of responsible vocational educators who have had special training and who have appropriate aptitudes for the tasks involved. The practice of assigning a person not specifically trained as a teacher educator to the responsibility of teacher education is seldom a satisfactory means of achieving quality in teacher education.

The evaluation of vocational teacher education should be a part of the state's total vocational program evaluation.

It seems logical that evaluation of a statewide program of vocational education would include an evaluation of teacher education, but, this is not the case in many instances of State evaluation. Any statewide evaluation of vocational education which does not include the specific evaluation of teacher education is questionable.

Vocational teacher education programs should utilize the services of advisory committees.

Every teacher education program involves instruction about advisory services, and yet not all teacher education programs take advantage of such advisory services. Teacher education cannot

20

become "an island unto itself;" it must be continually regenerated by attitudes, opinions, and data supplied by school administrators, industrial representatives, teacher educators, and teachers. This issue is basic to quality in teacher education.

These twenty-six principles have a direct relationship to establishing an effective, realistic program of vocational teacher education. This paper does not exhaust the listing of principles that could be related to this subject, but does portray some of the most controversial and prevalent principles in the minds of vocational educators today.

ROLES, TASKS, AND RESPONSIBILITIES

The sponsors of the vocational education movement placed value upon teacher education as a prime requisite for quality in vocational education. The literature about vocational education prior to 1917 shows clearly the position of importance of teacher education; however, no national models were developed. When the Federal Board for Vocational Education discussed plans for vocational education with the states in August 1917, particular attention was paid to the states' intentions relative to teacher selection and training. Almost all of the leadership in teacher education during the early years of vocational education came from the Federal Board. Bulletins and papers were prepared by the Board, and national and regional meetings were sponsored by agents of the Board in the interests of developing statewide programs of teacher education. The Federal Board was the teacher for the states in developing teacher education programs. Over the years the role of the Federal office changed from that of teacher and director to stimulator. In addition, organized teacher education groups, with national and state components, and affiliated with the American Vocational Association, emerged into leadership roles in teacher education.

Recent national legislation for vocational education has not intentionally reflected a lower priority for teacher education, but the program of teacher education has been subsumed an omnibus category, referred to generally as ancillary services. The trouble with a particular unit falling into this omnibus situation is that it becomes "out of sight" and consequently "out of mind." Flexibility in the new legislation, and the stated concerns for attention to specific programs for specific groups, overshadow teacher education concerns. This is not to say that teacher education has neither grown nor improved--it has, and possibly remarkably so. But it is to say that the present grand design for vocational education must include a renewed emphasis upon the teacher.

Delineation of roles, tasks, and responsibilities must be brought into the limelight once again. It is imperative that new decisions be reached, or old ones reconfirmed, about the basic allocation of teacher education effort.

An assumption has been made that the roles, tasks, and responsibilities for teacher education can be defined under the headings of Institutional, Local, State, and Federal. The roles, tasks, and responsibilities which follow are expressed in terms of principles or fundamentals.

Institutional

Plan, coordinate, and evaluate programs for the development of vocational education personnel.

Comprehensive programs of vocational teacher education are often planned and executed in a vacuum. In order to plan effectively, enthusiastic and well-informed persons should be invited to assist vocational teacher educators in developing a sound and worthwhile program. These persons may serve as an evaluation team and offer constructive suggestions that would ultimately enhance the teacher educator's position and the program of vocational personnel development.

Clarify the positions of vocational teacher educators concerning employment conditions, organizational structure, and relationships and responsibilities to other institutions and to the state and local educational agencies.

This principle suggests that teacher education exists in an environment of administrative confusion. In many instances the teacher educator has simultaneous responsibilities to state agencies and the educational institution. This dilemma does not seem to arise when a teacher educator is a member of the state staff and is housed by contractual arrangement in the institution which provides vocational teacher education. A conflict of interest results when the state agency and the educational institution are sharing equally the costs for the services of a teacher educator. The teacher educator cannot answer to more than one authority and be expected to perform his work effectively and efficiently until his administrative relationships are thoroughly clarified.

Analyze the multiplicity of programs serving vocational teachers and combine programs which are common in practice, application, content, and professional development.

For too many years, vocational teacher education institutions have specialized and served specific publics, such as agriculture, home economics, business, and distributive education, trade, and industrial education. There are differences which have been identified and attention has been given to them. However, all of these subject-matter areas are part of the vocational education family and should be treated equally as members of that family. If equal recognition is to prevail, then a program of teacher education must be designed that will meet the needs of all these areas and at the same time provide for individual program differences. This approach to vocational teacher preparation can strengthen the program and provide efficiency and effectiveness.

Provide vocational teacher education to meet the special needs of various populations, such as teachers for the handicapped, disadvantaged, culturally deprived, and the physically impaired.

Traditionally, vocational education has served society by preparing persons for gainful employment without giving specific attention to special groups of persons. These special groups of individuals have been absorbed into the "regular" program without reference to their individual differences. With the population explosion came vast numbers of people who require and must have special attention, guidance, and encouragement. For the most part, teacher education programs were not tooled-up to provide vocational teachers with the necessary knowledges to cope with special situations. An emphasis must be provided in vocational teacher education programs to assure that teachers develop special competencies to meet the challenges of special populations.

Give continuous emphasis to the professional growth and development of vocational education teachers.

Without a doubt, programs of vocational teacher education place a high priority on the teacher's professional obligation. Generally, however, professionalism means belonging to the subject-matter organization and the national association which represents vocational education. Little or no attention is given to providing teachers with the understanding and attitude that will encourage and permit them to act in a professional manner, in the best interests of their students. Teachers must be able to rationalize objectively about their positions as members of an administrative team and their own personal-professional obligations. Without being able to make these determinations, the teacher will have no voice in the governance of his own profession.

Conduct an economic appraisal, in terms of costs and effectiveness, of the programs for the development of vocational personnel.

Like evaluation, little attention has been given to costs and effectiveness of vocational teacher education programs. Information regarding costs as related to preparing persons to teach tends to be obscured by the multitude of activities and responsibilities of teacher educators. Institutions have usually not been concerned about accountability and about costs required to provide an effective and efficient program for developing vocational education personnel. It is quite difficult to determine how effective a teacher is in relationship to what it costs to prepare him to teach.

Perpetuate professional growth of teacher education staff through self-appraisal, in-service education opportunities, and creative and imaginative attitudes.

It has been said that "a vocational education program is no better than its teachers." A parallel to this may be stated that "the strength of a teacher education program is no better than its teacher educators." Complacency and traditionalism have no place in contemporary teacher education. Teacher educators must discipline themselves to be imaginative, creative, vibrant personalities to insure that the program is the best that can be attained. Vocational education cannot become an effective system for preparing individuals for the world of work unless the teacher educator recognizes his responsibility to develop an innovative program of teacher education.

Utilize differentiated staffing in vocational teacher education programs.

Teacher educators can no longer depend solely upon their own experiences and competencies in preparing persons to become vocational education teachers. They must be willing to recruit, accept, and employ persons with special skills to aid the total program of personnel development. Without the services of semi- or para-professional personnel, the program will become stagnant and traditionalized.

Organize functional advisory committees for programs of vocational education personnel development.

Teacher education has not utilized advisory committees advantageously. Seldom have invitations been extended to knowledgeable, well-informed citizenry who could make contributions toward guiding the maintenance and/or improvement of a program for the development of vocational education personnel. Committees should be composed of individuals who are concerned about teacher education, who know and understand the educational community, and who are willing to accept responsibility for developing and maintaining an effective program for preparing vocational education personnel.

Local

Recommend type of education and experience necessary to assure that each instructor will function appropriately in a career-oriented educational environment.

The local agency has the responsibility for recommending the type of education necessary to assure that each educator in the local education agency will function appropriately in a career-oriented educational environment. Such recommendations may include courses in vocational education, educational philosophy or concepts for all teachers, or a program of work experience designed to give educators a perspective of the world of work.

Develop a long-range program of professional growth for each person employed in the vocational education program.

It is the responsibility of the local education agency to develop a long-range program of professional growth for each person employed in vocational education. An individualized program of professional growth which is based upon individual needs should be developed for each person, whether he be the vocational director, the vocational counselor, dean of vocational education, or instructor. This will enable the individual to pursue a systematic program of development leading to excellence in the profession. It will also assure the system of greater numbers of qualified personnel at all levels. Although this objective is accomplished in cooperation with the state and institutional agencies, it should be recognized that it is a primary responsibility of the local education agency.

Develop long-range projections (1 to 5 years) of vocational education personnel needs.

Development of a plan describing long-range vocational teacher education needs for each local education agency will provide the State office and the teacher education institutions with information needed to plan an effective program of vocational teacher education. Although this information has primary value to the state office and the teacher training institutions, it must be recognized that the local educational agency is in the best position for projecting long-range needs for vocational personnel.

Stimulate vocational education personnel to participate in occupational teaching and in-service training activities.

Stimulation of vocational educators to participate in in-service training activities should be accomplished through normal motivation; but because of the tremendous importance of in-service vocational teacher education, it may be necessary to make in-service education a condition of employment. A possible problem exists where teachers have dual certification, i.e., they may have academic credentials in addition to their vocational certification and may demonstrate a reluctance to engage in in-service education on an after-school basis when their academic colleagues are not required to do the same. This emphasizes the need for initiative to be taken primarily, by the local educational agency, but with the cooperation of the state and educational institutions which may be performing the actual in-service program.

Appoint a person to be responsible for the management of a local professional development plan.

Someone has to be in charge. Professional development plans will not develop in local areas unless someone "rises to the occasion" or is assigned the responsibility. Much improvement in vocational professional development can result if someone on the local level has been identified to work with state, county, regional, or teacher education personnel. Professional development plans, to be effective, must reach every person in vocational education. Top priority must be assigned to professional development for teachers. It would be much easier to carry out teacher education professional development programs if a local person was designated as the "key" person for professional development.

Identify in-service educational needs of currently employed vocational education personnel.

In order to take full advantage of the provisions of the Vocational Education Amendments of 1968, it is necessary that the local educational agency provide a vast amount of in-service education for persons currently employed. It is considered the responsibility of the local educational agency to gather data about in-service needs and disseminate it to the state office and teacher training institution, and to cooperate with those agencies in developing a program that will satisfy the educational needs.

Provide training stations, guidance, and supervision for student teachers, interns, teacher aides, and others who are entering careers in vocational education.

The local education agency has a key responsibility in working with teacher training institutions to provide training stations for student teachers, and to assist in a program of guidance and supervision which will assure meaningful experiences for trainees. Too often student teachers are assigned to a training station with little supervision, leaving the student teacher to fend for himself. This is a truly formative period for the student teacher and a time when he gains some of his most valuable experiences in his total teacher preparation program.

Not only is there continued need for training stations on the secondary level, but an increased need is recognized for community college training stations for persons preparing to teach in a post-high school environment. There are many characteristics common to secondary school teachers and community college teachers, but the differences warrant consideration of training stations in both types of institutions. In the area of student teaching, the person who has the greatest impact on student teachers is not usually the college professor, but rather the person in the teacher training station who has closest contact with the student teacher. The cooperating teacher, or the one who is assigned to assist the student teacher, should be a capable member of the staff who has a desire to work with and develop student teachers.

Budget for in-service training needs including released time, incentive pay, sabbatical leave, educational leave, and tuition payment.

Budget for in-service training needs should include provisions for released time, incentive pay, sabbatical leave, educational leave, and tuition payment. It is a common practice in business and industry to budget for in-service training; it is now necessary that educational agencies recognize this practice as a local responsibility.

Provide teacher salary schedules which equate vocational preparation and academic preparation.

Equate the range of vocational education preparedness for those new teachers who are long on academic preparation and those who are short on academic preparation, and establish a salary schedule which adequately takes this range of starting conditions into account. New vocational teachers who are short on academic preparation are often penalized on the salary schedule, and many times those who are long on academic preparation and lacking in work experience are inappropriately evaluated in terms of their worth in the vocational education program. It is therefore important that a fair and compatible salary schedule be developed which will take this range of conditions into account. This becomes even more important as an era of mandatory teacher management negotiations is approached. The success of teacher recruitment and teacher education programs bears a strong relationship to the degree to which salary schedules account for this range of preparation.

Identify potential vocational education teachers.

Local educational agencies should do more toward the discovery of potential vocational education teachers among their students and begin early to groom them for future positions in vocational education. State-coordinated guidelines should be developed to assist the local educational agency in recruiting staff for vocational education needs. These guidelines should be applicable to the recruitment of supervisors, counselors, teaching aides, and other vocational education staff personnel. Follow-up of the state apprentice graduates might lead to a source of potential vocational education teachers. In cooperation with the local education agency, the state office and the educational institution, identified potential vocational education teachers could be encouraged to start their academic programs while gaining work experience.

Encourage attitudes of professionalism among vocational education teachers.

The local educational agency has a definite responsibility in developing an attitude of professionalism among all its vocational teachers. There are many vocational problems that can best be solved by educators through the device of the professional vocational education organization. Only as teachers develop an attitude of professionalism can they be stimulated to engage in professional activities; therefore, the local educational agency has the additional responsibility of creating an environment in which professionalism will thrive.

Develop evaluation plans to measure effectiveness of instruction in cooperation with the state agency.

One- and five-year vocational educational plans developed by the local educational agency in compliance with state regulations should include a program of instructional evaluation. Present plans lack accountability in the area of teacher performance. One- and five-year plans should, therefore, not only be explicit in terms of vocational programs which prepare and upgrade students for employment, but should also include plans to upgrade and evaluate effectiveness of instruction.

Work to improve lines of communication between vocational education staff and other professional staff.

Exchange of information on a face-to-face basis is exceedingly important. In addition to other teachers becoming interested and knowledgeable about vocational education, vocational education teachers must be well-informed about the total educational program of the school and district, and must participate as integral members of the total school staff.

Evaluate the environment in which the teacher conducts his vocational education program.

Evaluation of vocational teacher education should be conducted by the local educational agency and should include a review of each teacher's instructional environment. In evaluating the effectiveness of teacher education, it is necessary that the behavioral change, (or whatever has occurred because of the teacher or his teaching) be determined, not by examining the teacher, but by observing him as he functions within his environment. Such things as room lighting, the type of students in the program, relative fitness of the equipment, budget, storage space--all these are a part of the teacher's environment and must be taken into consideration when evaluating the effectiveness of vocational teacher education.

Make recommendations for the improvement of vocational instruction.

The local education agency should include as a part of the evaluation of vocational teacher education a recommendation for the further improvement of instruction. One of the goals in evaluating the effectiveness of vocational teacher education should be the improvement of instruction. It is therefore important that a part of the evaluation include recommendations for the improvement of instruction. In order to constitute a truly effective part of the evaluation, these recommendations should be transmitted to the state and the teacher training institution. Cooperatively, the local educational agency, the state office, and the teacher training institution can act upon instructional improvement recommendations.

State

Make teacher education programs readily available to all vocational education teachers.

It is the state's responsibility to see that teacher education programs are available to all vocational teachers. This includes pre-service and in-service, and concerns the teachers in the secondary schools, community colleges, technical colleges, and the various adult and manpower programs where preparation for work if offered. In view of the new emphasis and the vital need for teachers and counselors to orient students in the early grades, the State Department of Education has the responsibility to see that these teachers have the appropriate preparation to carry out this responsibility.

Identify the quantitative need for vocational education teachers.

It is the state's responsibility to summarize and to forecast vocational education teacher requirements. Data should be obtainable from local districts and used as one of the bases for predicting teacher needs.

The nature of short- and long-range teacher requirements bears directly upon the kinds of teacher education to be provided and may be suggestive of strengths and weaknesses of existing teacher education curricula.

34

Evaluate the performance of teacher educators.

Procedures must be developed that can be used by teacher educators for self-evaluation and by state administrators in vocational education for evaluating the performance of teacher educators.

Coordinate local and institutional teacher education activities.

The state is in an excellent position to provide a coordination service to teacher education institutions. It is important to reduce unwarranted overlapping of teacher education services and to strengthen programs where appropriate.

Disseminate information from national and state sources to teacher education institutions which bears directly on (or is closely related to) teacher education tasks.

Because of its close relations with the U.S. Office of Education and the local education agencies, the state is in a position to be acquainted with the latest developments and policies as practiced by these agencies. Colleges and universities may often be limited to the published article or the journal for information. It is the responsibility of the state to see that information concerning the most recent actions, policy positions, personnel changes, legal interpretations, and other actions vital to vocational education be made available to the college instructors who prepare vocational teachers. Unless these teacher educators are well-acquainted with the newest and latest developments, the preparation of new teachers will suffer.

Design certification standards for vocational education teachers.

Setting up certification standards is primarily a state responsibility. The Division of Vocational Education in the State Department of Education should continually assess the certification and/or approval standards for vocational teachers. It should seek to make changes when these standards become obsolete or do not fulfill the current needs. It should consult with the local education agencies and the institutions of teacher preparation, and then use its influence to obtain these changes as needed.

Review and approve vocational teacher education research proposals according to priority needs of the state.

The state should be actively involved in the review and approval of the proposals submitted to the U.S. Office of Education for research in vocational teacher education. The state cannot effectively serve all the agencies unless it is in the position of indicating the priority needs of the state, and to that extent indicate its support of proposals for funds to conduct special teacher education programs. In those cases where the state has developed an expertise in proposal writing, it should work cooperatively with local education agencies and institutions of higher learning in preparing EPDA or research proposals.

Administer funds for vocational teacher education.

Since funds may be available to the state under the Amendments of Vocational Education Act of 1968, under Part F of the EPDA, and from state sources, the state should plan to use these funds in the support of pre-service and in-service teacher education. To the extent that these funds are available, it should provide support to institutions of higher learning as well as to local education agencies interested in conducting in-service seminars and workshops. The state may also wish to use some of these funds in conducting conferences or in-service programs under its own direction. Providing funds to the various institutions carries with it the responsibility to evaluate the effectiveness of the programs which are supported. Funding to the colleges and universities should enable them to go beyond their routine role of preparing teachers and to serve vocational education more effectively.

Plan and coordinate an educational personnel development program.

The state should submit proposals to obtain EPDA (Part F) funds in order to serve the state. Proposals to be submitted should be based on the needs of the local education agencies, colleges, universities, community colleges, and technical colleges. They should provide an opportunity for innovative practices which may improve the general direction of teacher preparation.

Provide leadership for the coordination of all vocational teacher education programs.

The state has the responsibility of providing leadership for coordination of all teacher education programs. The preparation of vocational teachers cannot be isolated from the general preparation of all teachers. It is vital that state vocational personnel be involved in any coordinating effort or affiliated with any advisory group which functions within the state relative to the preparation of teachers at all levels. By functioning on this general level, the State Division of Vocational Education can be more effective in its program for improving the specific preparation of vocational teachers.

Federal

Develop and recommend general guidelines for the implementation and improvement of vocational teacher education.

The purpose of guidelines is to assist the states to develop appropriate programs of teacher education in cooperation with the financial support and leadership of the federal government.

Coordinate federal services which can support vocational teacher education.

Coordinate the services available in the federal government which can further develop and improve teacher education in the states. Help to eliminate unnecessary duplication and assist the states to utilize funds, services, and materials which are made available.

Administer federal funds for vocational teacher education.

In addition to the funds that are made available by the 1968 Vocational Education Amendments and the EPDA, funds which are supplied for research, curriculum development and exemplary programs may also in certain situations support programs in teacher education. The federal government in cooperation with the states should establish priority of needs for teacher education. Federal funds should then be used to support programs that are designed to meet those needs.

Encourage the development and implementation of model vocational teacher education programs.

The additional demands being made on vocational educators make it necessary to develop the most effective types of teacher education programs to prepare instructors and leaders who are well-qualified to conduct the new programs of vocational and technical education.

Sponsor national conferences, workshops, and research studies to improve teacher education programs.

There is a continuing need for the sponsorship nationally of different types of conferences and workshops. These should be designed to furnish the information which is needed by teacher educators and by leaders in vocational and technical education.

Collect and disseminate data about research studies and exemplary programs, including data from national societies and non-governmental agencies, related to teacher education.

Many new exemplary projects are being implemented throughout the nation. Some of these probably relate to teacher education. It is important for the state to be fully advised concerning exemplary programs that can help to improve teacher education.

Sponsor the development of curriculum materials to improve teacher education.

Careful consideration should be given to the advisability of using some of the curriculum funds for the implementation of curriculum materials which can help to upgrade programs of teacher education.

Negotiate contracts to develop instruments for the evaluation of teacher education programs.

Funds available on the federal level that can be used for evaluation of teacher education should be made available by contract to national centers, research groups, teacher education institutions, and State Departments of Education to evaluate programs of teacher education. The federal government should monitor these contracts to see that the funds are effectively used and to assure that the findings will be made available to the States.

39

Make national assessments of the range, scope, and effectiveness of vocational teacher education.

An assessment study should be made annually of teacher education programs. Such a study should take into consideration the number of teachers and leaders enrolled, materials developed for use of instructors, research conducted, changes in the program, services provided to the teachers through visitation and workshops, and facilities used in teacher education.

Collect and publish data about the availability of vocational education teachers.

It is important to keep up-to-date information concerning the number of teachers and other leaders who are being prepared. The availability of this information should increase the employment opportunities of the teachers educated; it can help in the adaptation of teacher education programs and can have a direct influence on the development of new programs of vocational and technical education.

Determine the need for, and adequacy of, programs designed to develop state leadership.

Both the old and new programs of teacher education designed to develop state leaders, teacher educators, and specialists should be evaluated carefully. Effort should be made to provide adequate programs of education for teachers who are to be advanced to positions on the state or other administrative levels.

Assess the status of accreditation of teacher education institutes.

More information is needed about the accreditation of programs of teacher education institutions, and of institutions which conduct programs that relate to vocational and technical education. New developments in the field of accreditation should be appraised and if advisable, the federal government should provide additional leadership to assist in improving the accreditation of these institutions.

Evaluate the effectiveness of projects funded through EPDA and other federal teacher education programs.

The purposes of these evaluations are to identify weaknesses, determine the effectiveness of the programs, and disseminate the results of the evaluations.

IMPROVEMENT AND EXPANSION

Vocational education can be proud of its teacher education programs. These programs have served vocational education well and it seems safe to say that vocational education is somewhat better off because it did, in fact, honor principles of teacher education as an integral part of its total program.

Some programs of teacher education are better than others. Some programs have been conducted by inspired teacher educators. Some programs have had strong support of educational administrators. Some programs have had unqualified attention from State Directors of Vocational Education. Nevertheless, significant differences in content, method, and procedures appeared. In part, this was a good sign because it indicated a strong desire not to cast all teachers into the same mold, and to recognize the individual talents of teachers. Despite the variety of differences, all programs of teacher education have recognized the centrality of the teacher in relation to quality of vocational education programs.

New ideas for implementation of vocational education programs, as expressed in the Vocational Education Amendments of 1968, with broad and flexible concepts related to people and occupations, did not define in any specific way how teacher education should adjust in line with general expansion of vocational education. Recognition of the necessity to place an emphasis upon the teacher came in the form of the Education Professions Development Act, P.L. 90-35. Part F of the Act (Title II, VEA '68, P.L. 90-576) focused attention upon leadership development in relation to vocational education personnel.

Suggestions concerning improvement and expansion of vocational teacher education were received in the form of answers to questions related to ways and means, procedures, and resources and to the role of the principal professional organization--The American Vocational Association.

I

Identify the Ways and Means of Expanding Vocational Teacher Education (All Vocational Areas, Technical Education, Practical Arts, and Manpower) In Order to Serve a Larger Group of the Present and Potential Teachers

Establish an Office of Professional Development at the state level which is responsible for coordination and leadership for all phases of professional development.

Such action is intended to prevent duplication of services and administrative structures. Furthermore, it is intended to hold one office responsible for planning and implementation of professional development activities. It is not intended that this office actually perform all of these activities, but to arrange for leadership activities to be conducted and to coordinate all statewide activities pertaining to professional development for vocational education.

Develop vocational teacher education as a definite subsystem of the larger total system of teacher education.

Throughout the United States there are two basic systems of teacher education: (1) one for all teachers except vocational education teachers, and (2) one for vocational education teachers only--the second system is further subdivided into various fields of vocational education.

It is obvious that economies can be achieved by joining forces. Each state is urged to make such adjustments, to capitalize upon the advantages of the commonalities in teacher education, but not to abdicate its responsibility for follow-through concern for vocational education teachers. Most general teacher education institutions (see #1 above) have little or no concern for the teacher after basic teacher education requirements have been completed. The

43

implication of EPDA and VEA '68 is toward continuous concern for the teacher throughout his instructional life.

> *Expand the scope of teacher education beyond pre-service and in-service training and beyond secondary and post-secondary education to include attention to areas such as manpower programs, correctional institutions, industrial programs, special groups, and a variety of continuing education programs.*

This item is self-explanatory, but it hints at a present defect in the system for vocational teacher education programs that concentrate attention largely upon the pre-service aspects of teacher education.

> *Plan for increasing emphasis on research in vocational teacher education programs.*

Teacher education institutions should be held responsible to provide all kinds of definitive data about teachers and teacher profiles. Such data should show changes in characteristics of teachers, trends and relationships of various kinds, and should in general be the source of all information needed about teachers. In addition, teacher education programs should experiment with new methodology and theories of teaching and learning, should integrate these elements into the teacher education program, and should publish and distribute new instructional data to teachers in the field.

> *Conduct teacher education programs both in the university and in the vocational schools to upgrade and/or prepare teachers for certification.*

The intent here is clearly to get teacher educators out of the "ivory halls" and into the real-life situation of vocational instruction. It is obviously possible to conduct teacher education outside the college or university classrooms and to shorten the length of time required for basic teacher preparation. Furthermore, such experience would provide an excellent base for the development of in-service programs of teacher education.

Utilize the services of nonvocational education specialists such as sociologists, economists, and representatives of industrial training programs.

Teacher education programs can profit by bringing specialists from other disciplines and from the world of work to consult with teacher educators, to participate in instruction of teachers, and to update vocational education teachers concerning related knowledge of value in understanding students and the social, economic, and technological climate in which they will work.

Use appropriate advertising resources to obtain new teachers.

This item suggests that it is imperative to seek vocational education teachers--people who have special qualities of value for vocational education instruction. Many new vocational education teachers get into the program by accident rather than by design. Recruitment of new teachers is essential to the progressive development of vocational education.

Provide off-campus training in geographical areas for greater availability; provide flexibility in student teaching; revise institutional requirements in line with off-campus instruction.

Needed changes in the method of providing teacher education seem to suggest that teacher education should be taken to locations where the teachers are. Campus classes are not necessarily taboo, but considerable adjustment and flexibility can be provided if teacher educators view their task as extending far beyond the confines of the campus.

Evaluate present teacher education programs to determine effectiveness and efficiency.

What good does teacher education really do? What evidence can be gleaned to show that teacher education is actually valuable, and that it does in fact help teachers? These are continuing tasks of teacher educators who are responsible to obtain and make available the evidence to demonstrate beyond reasonable doubt the worth of the teacher education program. Evaluation of teacher education has never been more imperative.

Conduct a status survey to determine supply of and demand for teachers in vocational education.

State administrators should know that teacher education programs are in fact preparing a sufficient number of new teachers to account for normal turnover and expansion. Attempts should be made to determine the long-range requirements for vocational education teachers.

Be flexible in meeting pre-service and in-service needs of teachers; make field, summer, and evening courses available to potential teachers.

All states seem to have a general problem of making teacher education available in a variety of ways to meet the special requirements of teachers.

Improve the utilization of teacher education staff by combining courses which are essentially common to all vocational areas.

This issue condemns the practice of offering separate teacher education courses in a single institution for different vocational areas, particularly courses which can be construed as common to all vocational education areas. Institutions are urged to make adjustments where such obvious duplication occurs.

Examine the practices of state funding of vocational teacher education.

States vary widely in the extent to which they invest in vocational teacher education. In the absence of definitive data, it is believed that some states have so "weaned" the teacher education program that its actual effectiveness is impaired. A corollary to the general problem suggests that states should know what they are actually getting for their investment in teacher education, regardless of the size of this investment. Comparative data should be obtained on a national basis about the actual investment in teacher education.

Include evaluation and preparation of instructional materials in teacher education programs.

This item implies the need for curricular material in vocational education and implies further that development of instructional material for a variety of vocational programs should be undertaken by, under the direction of, or in close relationship to teacher education. Other things being equal, teacher education is (or should be) in a strategic position to evaluate instructional materials and supervise the preparation of such materials.

Encourage vocational education teachers to recommend potential vocational education teachers.

Every teacher finds in most of his classes an outstanding student who seems to have desirable qualities to become an outstanding vocational education teacher. This is one part of the total recruitment program. Vocational education teachers are urged to become sensitive to their potential for suggesting teachers, either from their classes or from their business and industrial contacts.

Develop and implement programs for preparing an increased number of teacher educators.

How a person becomes a teacher educator seems clouded in mystery. Very little is being done to find potential teacher educators and to provide them with special workshops, institutes, or seminars in order to speed up the process of becoming sensitive to the many facets of teacher education. Few if any states would have the capacity to organize and conduct teacher education preparation programs. This appears to be a national EPDA problem which could be implemented by national leadership and provided in two or more areas throughout the nation at periodic intervals.

Sell the decision-makers on the importance of teacher education.

This entire project is beamed toward the task of bringing teacher education prominently to the attention of the decision-makers. The question of what is needed in the way of teacher education should accompany all vocational education program plans.

Develop state-wide and regional structures to promote cooperation among teacher education programs.

Although the responsibility for teacher education should be fixed in any state, talents throughout the state and in other institutions should be used.

Provide a direct "pipeline" between the state agency and teacher education institutions.

In some states, evidence indicates that teacher educators feel they are too far removed from state agencies responsible for program development and that the problems and issues confronting teacher education do not get to decision-makers at the state level.

Poll local administrators and instructors regarding vocational teacher education services needed.

Teacher educators must maintain a continuous relationship with the employers of vocational education teachers for the purpose of knowing firsthand about the kinds of teacher education services needed to improve the instructional capacities of teachers.

Recognize community college credit for vocational teacher education.

Concepts of the "open curriculum" in teacher education should prevail to the extent that a potential teacher can be given credit for similar or identical education requirements in teacher education. The new teacher in training should have an opportunity to "challenge" any teacher education course upon the basis of prior completion or prior experience related to the course.

Arrange for the joint appointment of teacher education faculty to community college facilities and to vocational education facilities at other universities.

This technique, where feasible, can assure depth to teacher education and can utilize competencies in a two-way process in teacher education.

Arrange for the appointment of state agency personnel to vocational teacher education faculties on a part-time basis.

The advantages of close involvement of the state agency personnel in the teacher education program are obvious. Benefits are gained both by the teacher educator and the state agency personnel; new and experienced teachers have an opportunity to become acquainted with state agency personnel and can share their hopes and fears with the policy makers in vocational education.

Use both resident and itinerant teacher educators.

This item is not only a convenience for teachers but tends to keep them in frequent contact with progressive development in teaching and learning. Use of itinerant teachers makes it possible to take advantage of specialized experiences which may not be available among resident teacher educators.

Make available many forms of financial assistance to teachers.

Increased emphasis upon teacher education suggests that some of the funds for teacher education should be devoted to direct assistance for teachers. The ultimate goal would be to provide all teacher education programs at no expense to the teacher, even to the point of giving an honorarium for the teacher to attend some kinds of teacher education programs.

Disseminate information about vocational teacher education to all interested groups.

Information about vocational teacher education is one of the best-kept secrets in vocational education. Until teacher educators make such information available, it is difficult to expect that all interested groups will provide strong support for teacher education. It is difficult to support that which you don't know much about or do not understand.

Develop vocational education personnel as individuals beyond mere "occupational" preparedness.

Occupational competency has been a hallmark in vocational teaching. However, the principles of teacher education go far beyond the single requirement of occupational competency. Programs of teacher education must have elements of a broadening nature and must be in tune with contemporary needs--teaching the culturally disadvantaged student, for example.

Apply AMIDS (Area Manpower Institute for the Development of Staff) on a broader front.

The AMIDS programs actually perform many teacher education functions which have been ignored, or possibly not specifically provided by the vocational educational legislation or the state plans. Teacher education is needed on a broader front than is commonly provided in the states; commitment has been largely to pre-service teacher education. Close collaboration with AMIDS will benefit both programs: (1) extend teacher education to a larger group, and (2) provide teacher education expertise which is not totally available in AMIDS programs.

Adapt certification format to permit entry from business and industry and from baccalaureate programs.

A frequent criticism of vocational education is that it does not provide a reasonable open entry to employment of teachers from business, industry, and other baccalaureate programs. Expansion hoped for in vocational education will require that states evaluate their certification requirements to be sure that such requirements are not excluding desirable teachers in vocational education.

Modernize teaching techniques: use a variety of teaching methods.

Teacher education programs should exemplify the best possible teaching. From the standpoint of instruction, teacher education programs should use modern devices and a variety of teaching methods to demonstrate by actual example their concern for the individual teacher.

Provide teaching specialists for various special student groups.

This is an opportunity for teacher education administration to bring teaching specialists to special groups of teachers--basic education, English as a second language, curriculum for the handicapped and the disadvantaged, and the like. This need must be recognized by teacher educators; otherwise it may not be provided at all.

Grant college credit for certified occupational experience.

Some states have experimented in granting college credit for occupational experience. This practice seems to be highly desirable and all states are urged to institute such a program, or to review and update programs now available.

II

Identify Specific Procedures to be Used to Improve the Effectiveness of Vocational Teacher Education

Develop more effective follow-up of first-year and second-year vocational education teachers.

For the most part these are the formative years for the vocational education teacher--the period of time when teachers need the most help on the job, and with real-life instructional situations. Teacher educators must be available to give assistance when needed. Furthermore, teacher educators could collect data continuously concerning the instructional problems of new teachers and then use these data to modify teacher education.

Make a state-wide study of total efforts in vocational teacher education.

This is part of the general knowledge that each state should possess about the actual programs of teacher education. Relevant data about vocational teacher education is scarce. Too little is known about the nature of the total effort, its strengths and weaknesses.

Develop better communications from the state office relative to resources (types of funds) available for special workshops in teacher education.

In the absence of statewide efforts to coordinate professional development, each teacher education institution must shift for itself in attempts to provide special services. Frequently these attempts are handicapped because of the lack of (or poor) communication with the state agency. On the other hand, all teacher education agencies should take the initiative to know what resources are available from the federal level.

Develop guidelines, on a national basis, for the evaluation of teacher education programs by the individual states.

Opinion is nearly equally divided concerning the relevance of this item. (As many people disagree, or are undecided, as agree.) It would appear to be advantageous for teacher educators to know about national attitudes concerning criteria for evaluation; the fear is related to imposing national criteria which may reduce local initiative.

Encourage all Divisions of AVA, and associated teacher education groups, to work together in support of vocational teacher education.

Teacher education frequently gets lost in relation to the major decisions about vocational education. Certainly one element of vocational education common to all Divisions of AVA is teacher education. It seems obvious that all Divisions should develop strong concerns about and support for teacher education.

Develop plans to improve the competency of teacher educators.

No satisfactory means has yet been devised in vocational education to provide self-renewal activities for teacher educators. This is an urgent item worthy of special consideration and support of EPDA programs. This problem is national in scope and cuts across all areas of vocational education.

Develop a state-wide vocational education management system which includes vocational teacher education.

This item is somewhat controversial. One out of three persons consulted tended to disagree or was undecided about the matter. It does seem reasonable that if any part of vocational education is evaluated, teacher education should not be excluded. Disagreement and indecision about this issue may suggest more direct self-evaluation activities among teacher educators.

Utilize the resources of the State Advisory Council in vocational teacher education planning.

Teacher educators should take the initiative to keep state advisory councils advised about the total program of teacher education and urge such councils to review and study teacher education resources in each state.

Explore the further development and utilization of correspondence courses in vocational teacher education.

Despite a strong negative attitude (four to one against), this item may have significant value. Few, if any, persons would agree with the item as a total replacement for present teacher training activities. However, vocational teachers (the isolated teacher, for example) for whom teacher education is not readily available cannot be ignored and must be served in the same manner as other teachers.

Promote field experiences and internships for vocational teacher education.

Realization of this item can follow many paths and is another example of the need for teacher education to explore new ways and dimensions of relevance.

Establish a program with an audio-visual specialist to assist in designing, selecting, and producing media for more effective teaching procedures.

One of the critical needs in teacher education is adequate provision for curriculum development laboratories which include the production of audio-visual instructional aids. For nearly a decade this provision has been recognized in federal legislation but is yet to become a reality.

Plan experimental studies contrasting alternative methods of vocational teacher education.

Teacher education programs must experiment broadly with methodology in teacher education. Principles of flexibility and individual instruction apply to teacher education and too often teacher education has been accused of making one suit which is supposed to fit all people. The item calls for variety in teacher education.

Increase attention to the development of research competencies as an integral part of vocational teacher education.

Teacher education programs appear to be the logical source for the development of research competencies among vocational educators. Not only should teacher education programs realize and develop this potential, but state agencies should move toward utilizing these resources for developing research competencies and to secure a greater degree of implementation of research data in instructional programs.

Help teachers develop and maintain positive attitudes toward work which they in turn will impart to their students.

That teachers must develop positive attitudes about the world of work is a widely accepted concept. How this can be accomplished by teachers should be included in the methodology of teacher education.

Encourage the exchange of teacher educators on a regional or national basis.

Although sixty percent of the persons consulted on this issue expressed a favorable reaction, there are practical problems which tend to inhibit exchange of teacher educators. Opportunity for exchange of teacher educators as participants in class work in teacher education is limited to the summer period; exchange of teacher educators for the purpose of planning and design of teacher education programs has not yet become popular. Realization of the goals implied by this item depends largely upon stimulation by the provisions of EPDA.

Develop a centralized teacher education program so that teachers are knowledgeable in all areas of vocational education.

Inherent in the goals of the Vocational Education Amendments of 1968 is the idea that teachers in one area of vocational education acquire knowledge and understanding of the vocational education program in other areas. The concept of a centralized core about all vocational education appears to have value despite a two-to-one negative reaction to this item by previous reviewers.

Test resource materials for effectiveness before publication.

The logic of this point is obvious. Nevertheless, some evidence seems to exist that pilot testing and field testing of resource materials, although highly desirable, are not carried out.

Involve teachers in developing instructional materials.

This is a logical step and can add relevance to instructional material development.

Make available to teacher educators all materials and equipment that are available to teachers in local districts.

One of the tragedies in teacher education is that some programs lack adequate materials and equipment. Teacher education programs should at least be able to deal with materials and equipment commonly found in local districts. Failure to supply this minimum quantity of material is as unsound as furnishing material and equipment of such a sophisticated nature that it is beyond the grasp of teachers in a local district.

Extend and improve interchange by putting teacher educators "where the action is" for feedback and problems of instruction.

This issue has been identified in a number of forms and it would be difficult to find fault with the obvious advantages of teacher education completely in tune with contemporary instruction in vocational education. Unquestionably the issue is representative of one of the imperative qualities of teacher education.

Use qualified part-time instructors to teach field classes, both pre-service and in-service.

This technique for improving teacher education was strongly recommended by vocational educators across the nation. In addition to the opportunities to provide expertise not found in the permanent teacher education staff, use of part-time instructors makes it possible to utilize teacher education talent in local districts and in business.

Use ETV network as a means of reaching large numbers of teachers.

Seventy-five percent of the people consulted about this item reacted favorably. However, before long-range investments are made, the research on the effectiveness of ETV must be reviewed. Despite great interest in and concern for ETV, teacher education has not experimented with its use sufficiently to warrant positive conclusions about its value as an alternative to other methods.

Offer evening and weekend workshops and seminars.

Every possible means should be used to provide teacher education programs at the convenience of teachers. Expanding the options for teachers is to be encouraged. However, use of evenings and weekends can only be regarded as one of the possible options.

Increase the use of media for self-evaluation by teachers.

A teacher never "arrives." Throughout his professional life a teacher is faced with the problem of teaching himself how to teach effectively. The technique of self-evaluation of instruction is an imperative aspect of teacher education.

Expand the use of advisory groups in personnel development.

Generous use of advisory services as an aid in reaching decisions about professional development is highly recommended.

Unify teacher education organizations in higher education institutions.

Negative reaction to this item (40%) is probably rooted in fear of losing comfortable and well-established patterns of teacher education. Duplicating and overlapping of services (particularly common areas) within a single institution are nevertheless difficult to justify.

Develop behavioral objectives for teacher education.

This is an exceedingly desirable means of improving instruction and provides an excellent opportunity for teacher education either to validate existing programs or to see clearly what additions are needed.

Provide opportunities for teacher educators to attend professional meetings.

Evidently some states isolate their teacher educators from professional relationships with their peers. Dialogue and general exchange of ideas among teacher educators tend to stimulate creativeness.

Disseminate knowledge of exemplary programs and techniques.

A program of disseminating knowledge about exemplary programs of teacher education is essential. Too often a teacher educator hears about new developments by accident. At present there is no regularly operating procedure to accomplish this task.

Provide in-service education for supervisors of student teachers.

Supervisors of student teachers must have frequent opportunities to review and adjust their goals and procedures in the light of

60

their combined experience with student teachers. In addition, results of research and reports of successful practices in related areas must be made available to supervisors.

Build incentives for professional development.

A carrot out in front attracts most people. Although it can be argued that each person has to find his own carrot (set personal goals on the basis of self-analysis), it is well-known that monetary and other kinds of rewards help. Some societies place a teacher at the very top of the social structure. Perhaps vocational education should take a long-range view toward developing some kinds of recognition for the master teacher. Ninety-two percent of the persons consulted believe in building incentives for professional development.

III

What Kinds of Resources are Needed to Expand and Improve Vocational Teacher Education?

Provide additional funding, including a substantial financial plan for teacher education facilities and equipment.

Definitive review and analysis of actual funding for vocational teacher education are not available for the contemporary program. Among the states, no one knows for certain the exact status and condition concerning allocation of financial resources for teacher education.

An assumption generally made about teacher education facilities is that they are poor. Consideration could well be given to construction and facility expenditures for teacher education.

Utilize more relevant innovation in instruction.

Objections to innovations in teacher education programs would be hard to understand. Obviously progressive, up-to-date, creative, and imaginative programs are imperative. One of the implications of this issue is strong self-policing of teacher education programs.

Use a variety of multi-media resources.

Most certainly expansion and improvement of teacher education should include liberal use of a variety of multi-media resources. The extent to which these items are actually available for teacher education across the nation is not known.

Provide continual access to instruction and counseling resources.

Too often teacher education stops when the vocational instructor leaves the campus and completes basic requirements for certification.

One of the imperative ways to improve the effectiveness of teacher education is to make teacher education resources available continuously to teachers throughout their teaching careers.

Coordinate "software" development between teachers and specialists.

Development of software resources for teacher education must include teachers in order to provide relevance to teaching requirements. Specialists must be used to provide a "leading edge" in software development and to avoid the need to make continuous improvements on possibly outmoded materials.

Provide more individualized instruction on a continuing basis.

A basic principle of teacher education is that it must exemplify individualized instruction. By actual example teacher educators must provide individualized instructional situations. One of the goals of teacher education is to achieve individualized instruction in vocational education classes.

Develop a "learning resource center."

By definition, a "learning resource center" represents the best of instructional technology and multi-media. Research in teacher education has defined the parameters of such learning centers, including design of appropriate buildings. The assumption that present teacher education facilities do not live up to desirable standards is well-founded.

Provide opportunities to renew occupational experiences.

The need for updating the occupational experiences of vocational education instructors is becoming more acute with increased technology. Such programs should become a part of a statewide plan, and teacher

63

educators should play a significant role in this plan.

Experiment in the development of exemplary in-service programs.

In-service training programs for vocational education teachers represent a major critical need in teacher education. All states must develop strong programs of in-service teacher education.

Provide for employment of specialized education consultants and make full use of school and community resources.

This point has been emphasized repeatedly and probably represents one of the largely untapped resources for improvement and expansion of teacher education; it requires a little imagination, detailed planning, and a lot of hard work.

Provide proper funding, minimizing soft money.

Soft money is attractive, and available, and should be used. However, the foundations of improved and expanded teacher education programs must be based on available hard money.

Publicize vocational teacher education and its availability in the state.

Structure and availability of teacher education programs are not thoroughly understood by vocational education teachers: among educators and policy-makers generally, the purpose, structure, and content of vocational teacher education constitute an almost unknown quality.

Develop better liaison between State Boards and teacher education staffs.

Centrality of teacher education is the scheme of quality in vocational education that suggests the desirability of two-way communication between the State Board for vocational education and teacher education. The situation is not resolved by informing State Boards about teacher education; teacher education must be accountable to State Boards for quality dimensions among teachers.

Make better use of teacher education programs as intern experience for vocational educators who are moving to positions of larger administrative responsibility.

Leadership development of potential administrative personnel could well provide substantial experience on the firing line of teacher education. After all, the nature of the administrator's job is affected by the quality of the vocational instructor. In addition, such intern experience could bring administrative problems into the structure of teacher education.

Study the possibility of using the resources of the post-secondary institutions.

The case in point is that any teacher education program which is confined entirely to the university campus can overlook a wealth of other resources. One of these resources is the post-secondary institution which does not now figure prominently in teacher education.

Develop basic textual materials for vocational teacher education programs.

More than one-third of the respondents to this issue do not regard development of basic textual materials as an aid to improving and expanding teacher education. On the one hand, there is a lack of such materials which are generally useful across the board; on the other hand, teacher education must maintain a degree of freedom from conformity to any rigid system of basic textual materials.

The fact that two-thirds of the respondents found value in the item suggests that it is a viable element of improvement, but that the hazards involved must be recognized.

Assign administrators to vocational teacher education programs who are especially prepared for this responsibility.

Evidently administrative responsibility and authority for vocational teacher education are assigned in some states to persons with little background, understanding, or sympathy for teacher education. Obviously, an improved and expanded teacher education program can grow effectively when the administration is knowledgeable about teacher education.

Regularize an annual assessment of the products of teacher education as feedback for improvement.

Regularizing an assessment of vocational teacher education, by reference to the teachers themselves, is unquestionably representative of a desirable feedback pattern.

Encourage local education authority to take initiative for the professional development of vocational education personnel.

Some enthusiasm for professional development must be generated from within the local educational authority. Local plans should be realized in cooperation with general state agency plans and in cooperation with teacher education programs.

Provide funding specifically for teacher education by adding an amendment to the vocational education act.

Support for this item (75% of the respondents) represents inadequate funding of teacher education by some of the states; consequently, forced funding by establishing a teacher education category in the legislation seems attractive. Precisely how this action would actually improve and expand teacher education is not clear; alternatives should be prepared.

Concentrate on using industry as a resource for training vocational teachers.

Reactors divided equally upon the relevance of this item as a resource for teacher education. Evidently use of this avenue in the training procedures among the states is not widespread. However, there can be no doubt but what industry does represent a potential resource.

Explore the potential of industry financing vocational teacher education.

Some unions have funds which have been used to provide annual seminars to update certain teachers of vocational education. Such programs have been generally excellent. Because of the imperative need for in-service teacher education, these potential resources should be explored.

Provide a national program which will underwrite in-service and pre-service programs for teacher education in vocational education.

Most of the funds for teacher education have been used in pre-service type programs. Expansion in the number of teachers needed, as well as development of a nationwide emphasis upon in-service programs, means that substantial funding is necessary. The centrality of the teacher in vocational education, and the numbers involved, suggest the need for substantial national funding of these efforts.

67

Develop strong liaison with Research Coordinating Units.

The Reseach Coordinating Unit (RCU) is definitely a new resource for teacher education. The RCU provides immediate access to research related to teaching and learning, and to development (models, for example) in teacher education.

IV

What is the Role of AVA in Vocational Teacher Education?

Relate systematically with national educational organizations, with business and industrial associations, and with other groups for the purpose of influencing and strengthening programs of vocational teacher education.

Respondents felt that these tasks were unquestionably a responsibility of AVA. Concentrated effort by AVA to represent vocational teacher education among all other national groups would in fact represent the best interests of teacher education.

Promote specific allocation of federal funds for vocational teacher education (get teacher education out of the "ancillary" class).

Teacher education is far too important in the general scheme of vocational education to be lost amid a general collection of miscellaneous aspects of vocational education. AVA is strongly urged to secure either categorical financial aid, or other means, in national legislation to focus major attention on teacher education.

Consider re-establishment of personnel exchange within AVA.

This item received only mild approval. Perhaps the divided vote represents a feeling that such service is not needed. However, if it is needed, AVA is the logical organization to take action.

Establish liaison between AVA and school accreditation agencies to work toward approval of vocational teacher education programs.

Teacher education in vocational education must become a part of the accrediting process and it appears by general agreement in this study that AVA must promote the accrediting process for teacher education. Appointment of teacher educators to accreditation

69

committees is highly recommended.

Take AVA to the field for teachers--offer regional, small group meetings, "circuit riders," or "drive-in" conferences.

Teacher education reinforces again an item already well-known--the fact that the teacher in the field does not have sufficient professional relations with the national organizations. Teacher education accepts the responsibility to develop pride in AVA, but the organization needs to establish extra services and relationships with teachers.

Provide support for national programs of professional development.

This item points toward professional development of all vocational education personnel (programs such as those arising out of USOE-EPDA) and places special emphasis upon the vocational education teacher.

Disseminate information about teacher education programs.

The role of AVA in disseminating information about teacher education practices was strongly established by the study. Implementation is probably a major task of the teacher education department working in close cooperation with divisional teacher education efforts.

Provide liaison with state associations for promotion of personnel development.

This item was strongly emphasized by the national study and reflects a general national need to sensitize state associations to action in professional development.

Assist in the development of criteria for teacher educators.

Two out of three people who responded to this item were in favor of the development of such criteria. Support for this role of AVA is a reaction against what appears to be extremely variable standards related to selection of teacher educators.

Maintain a directory of teacher education personnel.

More than 90% of the people responding to this item designated it as an imperative role of AVA. Implementation of this role could well become a task of the teacher education department.

Initiate committees for the study of teacher education curricula.

Periodic national studies of the total vocational teacher education program (pre-service and in-service) are urgently needed. Such studies (probably to be supported by EPDA) must contain the factual data about teacher education and clearly show extremes and trends. The role of AVA is to encourage the development of such studies, not necessarily to become actually involved in the study.

Encourage study of personnel development problems by division committees and urge inter-division communication regarding teacher education.

It is the role of AVA to continue to emphasize professional development as an integral part of division concerns.

Continue to emphasize and expand informational materials on vocational teacher education.

AVA must assume a role in relation to information about teacher education. At present it is difficult to describe, on a national basis, the total teacher education program.

Publish relevant teacher education instructional materials.

Assessment of the actual need for such materials is the task of the teacher education department. Although this item was highly recommended, the exact dimensions of the problem are not known.

Arrange for testimony about vocational teacher education to be presented to Congressional committees.

The status of teacher education, including its strong and weak areas, must be brought to the attention of the Congress along with other data used by the Congress in its reviews of vocational education.

Conduct a national conference on vocational teacher education similar to the legislative and post-secondary occupational conferences.

Eighty-five percent of the persons consulted see great value in such a national conference. The conference would not only focus attention upon teacher education and personnel development, but would go a long way in getting at teacher education issues which need further attention.

Develop comprehensive AVA yearbooks including chapters on philosophy, methods, and other facets of vocational education.

The literature of vocational education is unquestionably a weak link in the total national program. Frequent publication (as well as updating) of general kinds of information about vocational education is essential.

APPENDIX

List of Participants

ALEXANDER, Arch
State Department of Education
Stillwater, Oklahoma

BACHMAN, Martha
National Advisory Council
Hockessin, Delaware

BAILEY, Joe
Denver Community College
Denver, Colorado

BARKER, Richard L.
State Department of Education
Concord, New Hampshire

BARLOW, Melvin L.
University of California
Los Angeles, California

BENDER, Ralph
Ohio State University
Columbus, Ohio

BJORKQUIST, David
University of Missouri
Columbia, Missouri

BOTTOM, Lealon
Instructor, Manpower
Hobart, Indiana

BOWEN, Peter
State Department of Education
Providence, Rhode Island

BRANDON, George L.
American Vocational Association
Washington, D.C.

BRANDT, Joyce
Instructor, Health Occupations
Davenport, Iowa

BRIGGS, Lloyd
USOE-EPD
Washington, D.C.

BRINKMAN, Fred
Los Angeles Trade-Technical College
Los Angeles, California

BUNTEN, John
State Director of Vocational Education
Carson City, Nevada

BYRAM, Harold M.
Michigan State University
East Lansing, Michigan

CARTER, Fairchild H.
North Texas State University
Denton, Texas

CHAMBERS, Dorothy
City Board of Education
Birmingham, Alabama

CLARK, Wallace L.
State Department of Education
Denver, Colorado

COHEN, Sidney
State Department of Education
Hartford, Connecticut

COOPER, Lloyd
New Mexico State University
Las Cruces, New Mexico

DANNENBERG, Raymond
Western Michigan University
Kalamazoo, Michigan

D'AVELLA, Joseph V.

IN ADDITION:

Eighty unlisted delegates to the AVA Convention in New Orleans, Louisiana, December 1970.

ACCESSION NUMBER: VT102877

TITLE: REPORT ON VEPDA (VOCATIONAL EDUCATION PROFESSIONAL DEVELOPMENT ACT) INSTITUTE FOR OCCUPATIONAL SPECIALISTS. JUNE 18, 1973 - DECEMBER 7, 1973.

PERSONAL AUTHOR: MYRICK, ROBERT D.

DESCRIPTOR: *INSTITUTES (TRAINING PROGRAMS); *WORKSHOPS; *PERFORMANCE BASED EDUCATION; *INSERVICE EDUCATION; *PUPIL PERSONNEL WORKERS; EDUCATIONAL ACCOUNTABILITY; SKILL DEVELOPMENT; COUNSELOR TRAINING; OCCUPATIONAL GUIDANCE

IDENTIFIER: *OCCUPATIONAL SPECIALISTS; FLORIDA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 34P.

ABSTRACT: DESIGNED FOR SECOND YEAR OCCUPATIONAL SPECIALISTS, THE INSTITUTE CONSISTED OF TWO SEPARATE THREE-WEEK SUMMER TRAINING WORKSHOPS AND A COMBINED ONE-DAY FOLLOWUP IN DECEMBER. THE 41 PARTICIPANTS HELD POSITIONS CREATED BY FLORIDA LEGISLATION IN 1970, AND MOST HAD RECEIVED LITTLE OR NO TRAINING FOR THEIR POSITIONS. OBJECTIVES OF THE INSTITUTE WERE THE DEVELOPMENT OF SPECIFIC COMPETENCIES IN THE AREAS OF COMMUNICATION SKILLS, CAREER PLACEMENT, CLASSROOM GUIDANCE ACTIVITIES, AND ACCOUNTABILITY PROCEDURES. FOR EACH OF EIGHT COMPETENCIES, A PERFORMANCE CRITERION WAS IDENTIFIED WHICH PROVIDED A STANDARD FOR ASSESSING INDIVIDUAL PERFORMANCE AS WELL AS A METHOD OF PROGRAM EVALUATION. THE WORKSHOP AGENDA INCLUDED MORNING SEMINARS FOR LECTURES, DEMONSTRATIONS, AND GENERAL DISCUSSIONS AND AFTERNOON PRACTICE SKILL SESSIONS. SKILL DEVELOPMENT LABS, UTILIZING ROLE PLAYING TECHNIQUES AND VIDEOTAPED DEMONSTRATIONS, EMPHASIZED SKILLS IN FOUR AREAS OF COMMUNICATION: INDIVIDUAL INTERVIEWING, GROUP LEADERSHIP, CONSULTATION, AND PRESENTATION OF THE ROLE AND FUNCTION OF THE OCCUPATIONAL SPECIALIST. PARTICIPANTS PLANNED A COLLABORATIVE ACCOUNTABILITY STUDY TO BE CONDUCTED IN THEIR SCHOOLS AND SHARED EXPERIENCES IN THE DECEMBER WORKSHOP. RESULTS OF A POST ASSESSMENT INDICATED THAT THE WORKSHOPS WERE SUCCESSFUL IN BUILDING MOST OF THE DESIRED COMPETENCIES. APPENDIXES TO THE REPORT CONTAIN THE WORKSHOP AGENDAS, CORRESPONDENCE, AND A LIST OF PARTICIPANTS. (RG)

TABLE OF CONTENTS

I. Introduction

II. Objectives and Desired Competencies

III. Participants

IV. Program Description

V. Outcomes

VI. Conclusions and Recommendations

INTRODUCTION

The Occupational Specialist is a relatively new helping person in the schools of Florida. The position was legislated in July, 1970. However, most Occupational Specialists received little or no training for their position. Many of those who had worked one year in the schools expressed an interest in obtaining more preparation in the areas of communication skills, career placement, working with teachers and procedures which would help them evaluate their work.

In response to this need and with the support of the Division of Vocational Education in the Florida Department of Education, Tallahassee, Florida, a special institute was held for second year occupational specialists and funded through the Vocational Education Professional Development Act (VEPDA). The VEPDA Institute for Occupational Specialists was also supported and sponsored by the Counselor Education Department, College of Education, University of Florida, and was held on the University of Florida campus in Gainesville, Florida. Dr. Richard H. Johnson and Dr. Robert D. Myrick served as co-directors of the project.

The Institute consisted of six phases, including two separate workshops and a combined follow-up workshop. Phase One (June 18-July 8) was pre-planning by the staff. During this phase specific competencies were identified, the curriculum was planned, and methods of assessment were developed. Phase Two (July 9-July 27) consisted of a three-week intensive training workshop for 22 participants in residence at the University of Florida. Phase Three (July 28-August 5) included an assessment of the first workshop and modifications in the curriculum where necessary. Phase Four (August 6-August 24) was a second training workshop with 19 new participants in residence. Phase Five (August 25-August 31) involved final evaluation of the workshop, preparation for a one day follow-up workshop, and preparation of the final report. Phase Six (December 7, 1973) was a one day follow-up workshop. During the summer, participants planned a colloborative accountability study and the primary purpose of phase six was to collect the results and share experiences.

5

II. OBJECTIVES AND DESIRED COMPETENCIES OF THE INSTITUTE

Feedback and assessment were based on the degree to which each participant met specified competencies that were related to the overall objectives of the institute. With the help of reports and studies conducted by the Florida Department of Education, several objectives and skills related to these objectives, were identified. In turn, specific competencies were developed. These competencies were selected from four general areas: 1) communication skills, 2) career placement, 3) classroom guidance activities, and 4) accountability procedures.

The following list of competencies was the central focus of the institute. The criteria were determined a priori.

Objectives and Competencies:

A. Communication

Competency A1: Each participant will be able to effectively verbalize the role of an occupational specialist.

Performance Criterion: After presenting the role of a "mock" audience, each participant will receive a positive rating from 70% of the audience.

Competency A2: Each participant will be able to respond to another individual at a minimally facilitative level.

Performance Criterion: During a role playing interview, each participant will respond at a 3.0 level as measured by the Truax and Carkhuff Empathy Scale.

6

Competency A3: Each participant will have a positive attitude about working with teachers, principals, and parents.

Performance Criterion: Each participant will average a score of 48 or greater on a semantic differential rating of teachers, principals, and parents.

B. Career Placement

Competency B1: Each participant will be aware of sources where educational and occupational information may be found.

Performance Criterion: Each participant will be able to list at least 10 sources of educational and occupational information.

Competency B2: Each participant will know how to organize a placement service for a school.

Performance Criterion: As a group, the participants will develop guidelines for organizing a career placement service.

C. Classroom Activities

Competency C1: Each participant will know how to design a career exploration activity to be used in the classroom.

Performance Criterion: In small groups, participants will design career exploration activities for classroom use.

D. Accountability

Competency D1: Each participant will be able to conduct an accountability study.

Performance Criterion: After completing an accountability study, each participant will return to Gainesville on December 7 with the results.

Competency D2: Each participant will be able to coordinate the accountability efforts of another occupational specialist.

Performance Criterion: Upon returning to work, each participant will teach at least one other occupational specialist how to do the accountability study and will return to Gainesville with the other person's results at the completion of the study.

PARTICIPANTS

Selection Procedures. Following the guidelines set forth in the Director's manual for VEPDA programs, an announcement of the two summer workshops was made to Occupational Specialists in the state. County Pupil Personnel Services Directors, Occupational Specialist Coordinators and Guidance Coordinators in all the counties of Florida received letters that described the workshops (Appendix A). Application forms were provided (Appendix B). In addition, a follow-up memorandum encouraging administrative personnel to recommend persons was also sent to all counties in the state (Appendix C).

A total of 53 persons applied for the Institute or were recommended for it. Of these, 42 actually completed the application process and were enrolled as participants in the Institute. One participant withdrew at the end of the first week of the July workshop because of physical illness.

The Selected Participants. All of the participants had completed one year of work as an Occupational Specialist in Florida during the 1972-73 year. All were assured of employment as an Occupational Specialist for the 1973-74 school year.

Of the 41 participants in the two three-week workshops, 15 were male and 26 were female; 13 were black and 28 were white. The age range was 23 to 62, with a median age of 36.

There were 29 participants whose highest degree was a high school diploma. Eleven had completed a Bachelor's degree at a university or college and one held a Master's degree.

All participants were employed in public school systems. Grade levels with which they were usually assigned included the following:

Type of Institution		Number
Elementary (k-6)		3
Junior High (7-9)		6
Secondary (7-12)		30
Post-Secondary-Vocational		2
	TOTAL	41

Follow-up Workshop Participants. During the one day follow-up workshop held at the University of Florida on December 7, 1973, both workshop groups were invited to attend. A total of 34 participants returned for the meeting.

General Observations. As a group the participants were enthusiastic, hard-working, and demonstrated a professional attitude toward their position and objective. Morale was high and each person showed a sincere desire to gain the most from the workshop. A complete listing of participants for each of the two workshops appears in Appendicies D and E.

Program Description

The three critical phases of the Institute consisted of the two three-week summer workshops and the follow-up workshop four months later. A description of the workshop programs and activities follows.

Location of the Institute.

Both summer workshops were held on the University of Florida campus in Gainesville, Florida. All meetings took place in the Graham Hall residence area, where participants had an opportunity to meet in a large group seminar and also in small groups. Two rooms were equipped for skill laboratories, including video-tape equipment. Most of the participants lived in this dormitory area during their three weeks on campus. The follow-up workshop was held at Flagler Inn in Gainesville, Florida and will be described later.

The Institute Workshops.

Each workshop consisted of three weeks of intensive training. The first workshop was conducted during the period of July 9 - 27 and the second during August 6 - 24. The first day of each workshop was used to orient enrollees to the program and have them complete a battery of pre-assessment instruments related to objectives and competencies of the program. Each group was also given an opportunity to outline their own needs and to discuss the program in terms of meeting those needs.

A Typical Day.

A typical day in one of the workshops consisted of the following schedule:

A. M.	
8:30 - 10:00	Large group meeting and seminar. With all participants present, this time was used for lectures, demonstrations and general discussions.
10:00 - 10:30	Break
10:30 - 12:00	Continue with seminar activities
P. M.	
1:30 - 3:00	Skill Development Labs for Groups I & II. Study groups for Groups III & IV. Each group consisted of from five to six participants. While the lab groups worked with the lab instructors on specific communication skills, the study groups worked on tasks related to the goals of the program.
3:00 - 3:30	Break
3:30 - 5:00	Skill Development Labs for Groups III & IV. Study groups for Groups I & II.

The Seminars.

In general, each workshop was organized along the same lines. The seminars began with a discussion of role and function of an O.S. as it was at that time. This was followed by a discussion of the typical kinds of problems faced on the job. Finally, the group was given an opportunity to discuss the role and functions that they would like to assume and how they might go about acquiring the skills for that role.

Participants reviewed the basic concepts related to career development. Decision-making models were examined. Simulation games were tried and others developed. Guidelines for developing placement centers were also outlined.

Interpersonal communication skills received considerable emphasis. Participants learned the principles of forming a helping relationship and the techniques that can facilitate a person's intellectual and personal growth. These same concepts were related to working with small groups and classroom groups. Likewise, the ideas were examined in terms of their importance in faculty relationships and general consulting approaches.

The Vocational Exploration Group program was a part of each participant's training. This program consists of a VEG kit and leader's manual that can assist group leaders. Individuals are helped to explore careers and their own interests in a group setting. Each participant first experienced the program as a group member. Following skill and task training, each then led a small group of students as part of a practicum. Each also received feedback from an observer. Because the instructors were certified trainees in the VEG program, all participants qualified for the leader certificate and their names were sent to the Studies for Urban Man organization, Tempe, Arizona, for future reference and leader privileges.

Because career information and educational exploration are becoming a more important part of the school curriculum, all participants were prepared for group guidance activities in the classroom. Specifically, the participants learned to develop career activities that might be used in the classrooms of their schools. Consultation with teachers was also an important part of this area.

Target populations were identified for study. Possible intervention techniques were outlined. Role playing situations were developed to assist participants in working with special problems on the job. In addition, participants learned various procedures for evaluating their work. This included the development of self-report instruments and observation procedures. An accountability study was developed by each workshop group and received special attention as a project to be completed following the summer workshop and prior to the fall follow-up workshop.

The future of the Occupational Specialist in Florida was discussed, with each participant identifying the part that he might play in the positive development of the O.S. as a professional. Each workshop concluded with both a post-assessment of attitudes, communication skills and knowledge. In addition, each participant was given an opportunity to receive feedback from other members of the workshop.

The Skill Development Labs.

The Skill Development Labs (SDL) were a unique feature of the Institute workshops. Lab instructors who were highly skilled in the area of communications worked with small groups of participants. Four areas of communication received special attention in the afternoon labs: 1) Individual interviewing skills; 2) group leadership skills; 3) consultation skills; and 4) presentation and defense of the role and function of an occupational specialist's position. The labs utilized the skills of three lab instructors, who frequently used team teaching approaches and videotape equipment. A list of the activities for the skill development labs is given below:

I. Individual Interviewing Skills
Activities:

A) Video-taped demonstrations of good and poor interview techniques. Leader stopped tape periodically to point out specific strengths and weaknesses of interviewer's approach.

B) Role-playing was focused toward practicing the facilitating responses: listening, reflection, clarification and questioning. For example, two people would role play situations such as family difficulties like financial problems in home, abusive parents, and vocational choice. Following the role playing, feedback occurred between group members and was directed toward the role players. An audio tape was also used to point out specific instances when the particular responses might be implemented. The leader also asked the group how they might respond to certain situations in different ways.

C) Video-taping of individual role played interviews was also used. Some other role playing situations were: opposing life styles, values and attitudes, job interview situations for placement, classroom discipline problems such as children being sent to O.S. by teacher for disruptive behavior, pregnancy, students experiencing difficulties with employers and job conditions, black students interviewing with white O.S., female O.S. interviewing male students. An interview model was presented. The model consisted of first listening. Then reflection of feeling, reflection of content, clarification of the situation using open-ended questions, exploring alternatives for dealing with the situation, the consequences for those alternatives, and, finally, timely advise if appropriate to close the interview.

Group Leadership Skills
Activities:

A) Video taped individuals facilitating group discussion, followed by feedback and discussion of leader's role and group dynamics.

B) Video tape demonstration of leader facilitating discussion, followed by discussion.

C) Lab instructor lead participants through an actual group experience where the participants experienced the flow and dynamics of a group.

D) Each member was required to design and lead a small group exercise in which they stated to the lab instructor: the population, procedures, and desired outcomes. Feedback and discussion followed.

E) Each member led a group through a VEG exercise as group leadership practice, followed by feedback and discussion.

Consultation Skills

A) A didactic presentation of a consultation model.

B) Each member role played a situation involving consulting with teachers, parents, administrators, employers, and students.

Presentation and Defense of Role and Function

A) Each person was required to write his own role definition and present it to simulated group situations: faculty, students, board of education, PTA, community groups. Presentations were evaluated by each of the group members according to clarity, organization, poise, and knowledge.

The Weekly Schedule.

Although the two workshops varied in the small details of organization, a general plan was followed for the three weeks. An outline of the workshop's three weeks can be seen in Appendix F.

Letters of Recognition.

Upon completion of the summer workshop, the Superintendent of Schools for each participant was notified. This letter emphasized the competency based approach in the training program and outlined some of the areas for which specific competencies received attention. The letter also discussed the plans for an accountability study that was to be conducted by the workshop members and solicited support of the administration in this endeavor. A copy of the letter, which was also sent to other personnel in the local school system upon request of a participant, can be seen in Appendix G.

The Accountability Study.

Each workshop group decided upon a target population for each participant's school to be studied systematically. The target group was identified (undecided students and potential school leavers) and O.S. intervention were recorded. Randomization procedures were used in such a way as to negate the need for pre-assessment measures. Following an eight week intervention period, assessment of individual progress was made. Comparisons between control and experimental groups was possible. The data was pooled by the participants for each workshop. A report of the results will be made available at a later date.

The Follow-up Workshop.

The follow-up workshop was conducted four months following the summer program (December 7, 1973). This one day workshop provided participants an opportunity to share their experiences and report the results of the accountability study. An outline of the workshop is reported in Appendix I.

The Faculty and Staff of the Institute

The faculty and staff of the Institute consisted of the following members:

Dr. Richard H. Johnson, Co-director, Department of Counselor Education

Dr. Robert D. Myrick, Co-director, Department of Counselor Education

Mr. James Gummer, Skill Development Lab Assistant

Mr. Timothy Russell, Skill Development Lab Assistant

Ms. Elizabeth Winkles, Lab Assistant and Program Coordinator Assistant

Ms. Debbie Cartrett, Secretary

In addition, the Institute also drew upon the personal resources of the following persons:

Ms. Maria Duncan, consultant for skill development labs

Ms. Betsy Davis, data analysis

Mr. Ralph Lewis, Career Placement Center, University of Florida

Mr. Robert Sterling, GAP Program Director, Santa Fe Community College

Mr. Herb Rand, Division of Vocational Education, Florida Department of Education, Tallahassee, Florida

Mr. Dale Ake, Consultant, Vocational Guidance, Florida Department of Education, Tallahassee, Florida

Mr. Ferris Post, Pinellas County, Coordinator of O.S.'s

Ms. Ginny Craig, Secretary, who typed the final report.

Appreciation is also extended to the faculty members of the Department of Counselor Education, College of Education, University of Florida, for their cooperation.

Outcomes

For each competency, a performance criterion was identified. This provided a minimal standard for assessing individual performance as well as method of accountability. Although data were collected for the purpose of program accountability, the primary purpose was individual feedback for skill improvement. The following data were selected to give a general account of participants' competencies.

A. Communication

Competency A1: Each participant will be able to effectively verbalize the role of an occupational specialist.

Performance Criterion: After presenting the role to a "mock" audience, each participant will receive a positive rating from 70% of the audience.

This competency was met by a majority of the participants on the first trial. This is not surprising since several lab sessions were devoted to preparation for the role presentation. Instead of repeating the presentation, the lab assistants provided individual help for those few participants who did not meet the criterion initially.

Competency A2: Each participant will be able to respond to another individual at a minimally facilitative level.

Performance Criterion: During a role playing interview, each participant will respond at a 3.0 level as measured by the Truax and Carkhuff Empathy Scale.

While many participants did not reach criterion (see Table 1), there was a significant gain - from pretest to posttest. The workshops did significantly increase participants skill in facilitative responding (determined by a dependent t test) even though the magnitude of the gain was not as great as originally intended. Perhaps more than three weeks would be needed to achieve this competency.

TABLE I

	Mean Empathy Ratings			Degrees of
Pre	Post	Difference	t	Freedom
1.24	1.90	.66	9.26*	29

*p < .01

Competency A3: Each participant will have a positive attitude about working with teachers, principals, and parents.

Performance Criterion: Each participant will average a score of 48 or greater on a semantic differential rating of teachers, principals and parents.

Since participants averaged scores greater than 48 at the beginning of the workshops (see Table II), it is more advantageous to look at changes that occurred. Attitude scores toward teachers, principals, and parents increased consistently with the greatest change occurring on the "Teacher" concept. In general, the participants arrived with positive attitudes and increased them only slightly.

TABLE II

Semantic Differential Mean Scores

Teachers

Pre	Post	Difference
53.50	57.35	[illegible].85

Principals

Pre	Post	Difference
56.50	57.97	1.47

Parents

Pre	Post	Difference
52.39	53.66	1.27

B. Career Placement

Competency B1: Each participant will be aware of sources where educational and occupational information may be found.

Performance Criterion: Each participant will be able to list at least 10 sources of educational and occupational information.

At the beginning of the workshops, the average sources of information was 8.38, and at the end it had increased to 12.26 - an average gain of 3.88 sources (see Table III). When analyzed statistically by means of a dependent t test the gain proved to be significant. This criterion was met very well.

TABLE III

Mean Sources of Educational Occupational Information

Pre	Post	Difference	t	Degrees of Freedom
8.38	12.26	3.88	5.72*	33

$^*p < .001$

Competency B2: Each participant will know how to organize a placement service for a school.

Performance Criterion: As a group, the participants will develop guidelines for organizing a career placement service.

Through a process of group interaction the following guidelines were developed. Although the guidelines are of a general nature, the interaction that took place in developing them produced many specific ideas.

Guidelines for Organizing and Evaluating a Career Placement Service

I. Pre-planning
    A. Outline the program
    B. Elicit cooperation from school personnel
    C. Identify physical facilities

20

II. Organize facility

    A. Select an advisory committee from school and community

    B. Secure resource materials

    C. Organize the materials

III. Student-Teacher Involvement

    A. Publicize services throughout the campus

    B. Present specific program to faculty

IV. Implement at least the following components:

    A. Decision-making activities

    B. Referral

    C. Job Placement

    D. School Placement

V. Evaluate all components

C. Classroom Activities

Competency C1: Each participant will know how to design a career exploration activity to be used in the classroom.

Performance Criterion: In small groups, participants will design career exploration activities for classroom use.

Following a prescribed format, participants designed career exploration activities for use in the classroom. The activities were creative and well designed (See Appendix J for some selected samples). Besides having activities to take back to their schools, participants learned the process of designing classroom activities.

D. Accountability

Competency D1: Each participant will be able to conduct an accountability study.

Performance Criterion: After completing an accountability study, each participant will return to Gainesville on December 7 with the results.

The study was extremely difficult to implement, yet all but 10 were able to complete the task. Of the 10, it is difficult to ascertain whether the failure was due to inability to carry out the study or extenuating circumstances. Nevertheless, three-fourths of the participants met the performance criterion.

Competency D2: Each participant will be able to coordinate the accountability efforts of another occupational specialist.

Performance Criterion: Upon returning to work, each participant will teach at least one other occupational specialist how to do the accountability study and will return to Gainesville with the other person's results at the completion of the study.

Of all the competencies, this was performed least satisfactorily. Only 8 participants were able to involve other Occupational Specialists in the accountability study. The logistics of this task were far more difficult than anticipated and should not have been included.

Conclusions and Recommendations

The objective data indicated that the workshops were successful in building most of the desired competencies. Participants completed the training with: a) increased communication skills, b) increased awareness of sources of educational-occupational information, c) knowledge about how to organize a career placement service, d) and the ability to conduct an accountability study. Letters and personal communications indicated that the workshops increased participants' feelings of competency.

The following recommendations are suggested for future Occupational Specialist Training grants:

1. The general format of morning seminars and afternoon skill development labs should be continued.
2. The competency and performance criterion approach should be continued. It provides a standard on which to base individual assessment.
3. More time should be devoted to communication skills--particularly for first year Occupational Specialists. Most participants expressed the need for this training their first year on the job.
4. Perhaps the greatest need of all is for clearer delineation of Occupational Specialists' functions within their individual settings. One of the greatest conflicts facing Occupational Specialists is that their principals have one expectation, their counselors a different expectation, and they, themselves, a third expectation. Workshops involving occupational specialists, counselors, and administrators (all from the same school) could be very instrumental in resolving this conflict.

VEPDA Institute for O.S.'s
University of Florida Summer Workshop Schedule

FIRST WEEK

Day / Time	Monday	Tuesday	Wednesday	Thursday	Friday
8:30 - 10:00 (Seminar)	Registration	Job Functions	Introduction to Career Development	The Art of Communication	Group Discussion Skills
10:30 - 12:00 (Seminar)	Get Acquainted Activities	Job Problems	The Helping Relationship	Facilitative Responding	The Feedback Model for Communication
Skills Development Lab (SDL)	Orientation Pre-Assessment on Attitudes	Pre Assess Skills in Communication	The VEG Program & Experience	View Demonstration Tapes Practice Responses	Practice Facilitative Responses
Groups	Social Committee 16 P-F	Write Definition of Occupational Specialist	VEG	Identify Student Target Groups	Write Description of Present Working Facilities
Evening		Pizza Party			

SECOND WEEK

Day / Time	Monday	Tuesday	Wednesday	Thursday	Friday
8:30 - 10:00	Pre Assess Knowledge Placement Service	Placement Center Guidelines	VEG Practicum Visit Placement Center & Project GAP	VEG Forms	Organize a Career Development Program
10:30 - 12:00	Decision-Making Models	Decision-Making Simulations	↓	Designing Classroom Activities Brainstorm Ideas	Role-Function
SDL	Practice Group Skills	Small Group Role Playing VEG exercises	Switch Groups From Tuesday	Lead Small Group Activity	Large Group Discussion and Evaluation
STUDY Group	Design Hypothetical Placement Service	VEG Tasking	Design a Small Group Classroom Activity	Decision-Making Exercise Design Classroom Activities	Write Ideal Wk. Design Classroom Activities
Evening				Party	

THIRD WEEK

Day / Time	Monday	Tuesday	Wednesday	Thursday	Friday
8:30 - 10:00	Share Classroom Activities	Accountability Methods Descriptive Statistics	Choose Acct. Topic Outline Study	Post Assess Attitude & Knowledge	Post Assess Workshop 16 PF Interp.
10:30 - 12:00	Discuss Ideal Week	Acct. Study	Brainstorm Intervention Techniques	Future of OS Herb Rand	Strength Bombardment
SDL	Consultation	Switch Groups From Monday	Defend Role	Post Assessment Skills Lab	
STUDY TIME	Write Role Descriptions	Develop list of Acct. Topics	Prepare Behavior List for Acct. Study		
Evening				Party

MEMORANDUM

TO: County Pupil Personnel Services Directors, Occupational Specialist Coordinators and Guidance Coordinators

FROM: Robert D. Myrick and Richard H. Johnson

SUBJECT: Occupational Specialist Summer Institute
VEG Workshop Compoent

Enclosed are materials that will be of interest to you about the Vocational Exploration Group. Included is another brief description of the program and an inservice component description.

Most important is that the two three-week summer institutes have been approved and application forms are enclosed. If you have any outstanding two-year occupational specialists please encourage them to apply. If you have more than three, just submit the necessary information that appears on the application form. Because we are short on time it is absolutely essential that we hear from interested persons no later than June 18.

Please see that the appropriate personnel in your county receives this information.

Training Institute for Occupational Specialists

The Counselor Education Department of the University of Florida will offer two three-week summer workshops for 48 second year Occupational Specialists in the state of Florida. The intensive workshops will be held July 9 - July 27 & August 6 - August 24, 1973, on the University of Florida campus and will include special training in the areas of (1) communications skills, (2) career information centers, (3) placement and follow-up procedures, (4) classroom career exploration units, with a focus on consultation with teachers, (5) assessment and evaluation of skills and programs, including an accountability study. A typical day will feature morning seminars, an afternoon session of skill-building labs, with supervised practice and video-tape feedback.

Participants must attend all 15 days of a workshop and will be paid a stipend of $100 a week ($20 a day), plus travel expenses, in order to be in residence for the three-week period. Books and materials will be furnished. Participants will take part in an accountability study which will help evaluate the work of an occupational specialist. There will also be a one-day follow-up workshop five months after the summer institute has been completed (December) with stipend and travel paid for participants.

Co-directors for the Institute are Dr. Robert D. Myrick and Dr. Richard H. Johnson, Counselor Education Department, University of Florida.

Application

1. Applicants should write a letter which includes the following information: (a) Name, (b) Age, (c) Place of employment (1972-73), (d) Immediate supervisor or coordinator, (e) Position and place of anticipated employment (1973-74).

2. In addition, applicants should describe briefly one satisfying and dissatisfying work experience (1972-73) as an Occupational Specialist.

3. Applicants should also include two recommendations from supervising school personnel (e.g. principal, county school supervisor, county coordinator, supervising counselor, superintendent, etc.).

Additional information may be obtained from either Dr. Myrick or Dr. Johnson (904-392-0731).

Applications should be received no later than June 7. Please mail to:

Dr. Robert D. Myrick
Co-Director, VEPDA Training Institute
Counselor Education
University of Florida
Gainesville, Florida 32611

The funds for this Institute were only recently granted and every effort is being made to select 24 representative participants who are interested and committed to the work of an Occupational Specialists. It is important that applications be received as soon as possible. All applicants will receive a written reply.

COLLEGE OF EDUCATION

UNIVERSITY OF FLORIDA
gainesville, florida - 32601

A

This letter is to inform you that has successfully completed the 1973 Summer Institute for 2nd year Occupational Specialists held at the University of Florida. This intensive three-week institute was funded through the Vocational Education Professional Development Act and supported by the Vocational, Technical, and Adult Education Division and the Student Personnel Services Division, of the Florida Department of Education.

The institute was unusual in that it was competency based. Participants attended morning seminars and afternoon practice skill sessions. Specific competencies related to the following areas were developed:

1. Interpersonal communication skills, including personal interviewing and group discussion techniques
2. Certified leadership training in the Vocational Exploration Group program, a small group approach for career development
3. Techniques for developing a career placement center
4. Classroom activities for career awareness
5. Consulting with teachers and community helpers
6. Clarification of role and function of an occupational specialist
7. Accountability measures and techniques for assessing the effectiveness of an occupational specialist

During the institute an accountability study was designed to evaluate the effectiveness of the O. S. with early school leavers and students who are undecided about future vocational plans. Each occupational specialist will conduct a study and the data will be pooled. All participants will return to Gainesville on December 7, 1973, for final reporting of the data and for follow-up activities. Any support that can be given to this project will be greatly appreciated.

The participants at this workshop were an exceptional group of people, one of the most enthusiastic and dedicated of groups with which we have ever had the pleasure to be associated. It appears that pupil personnel services have gained a valuable asset to their team.

Sincerely,

Robert D. Myrick, Ph.D.
Richard H. Johnson, Ph.D.
Co-Directors

Occupational Specialist Follow-up Workshop
Friday, December 7, 1973
Flagler Inn, Gainesville, Florida

8:30 - 9:00	"Wake-up Time!" Coffee and Donuts
9:00 - 9:30	"Ain't nothin but a party!" Getting acquainted Getting organized
9:30 - 10:15	"Cussin & Discussin" Group meetings with Bob & Rich to share ideas and problems
10:15 - 10:30	Break--coffee, etc.
10:30 - 12:00	"Just gimme the facts" Sharing Intervention Techniques Going over data individually with Bob and Rich. Turning in the study.
12:00 - 1:15	Lunch
1:15 - 2:45	"Fireside Chats" Herb Rand, Dale Ake, Tim Russell, etc., reporting on the state of the union
2:45 - 3:00	Break
3:00 - 4:00	Wrap-up "Where do we go from here?"

TITLE: VOCATIONAL INSTEP. FINAL REPORT.

DESCRIPTOR: *SUMMER WORKSHOPS; *VOCATIONAL EDUCATION TEACHERS; *PROGRAM DESCRIPTIONS; *BEHAVIORAL OBJECTIVES; PERFORMANCE BASED TEACHER EDUCATION; PROGRAM EVALUATION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 14P.

ABSTRACT: THIS REPORT BRIEFLY SUMMARIZES AND PRESENTS THE EVALUATION RESULTS OF A SUMMER WORKSHOP FOR 24 VOCATIONAL EDUCATION TEACHERS IN ALABAMA. THE MAJOR OBJECTIVES AND STRATEGIES ARE OUTLINED, AND THE PROCEDURES AND PROBLEMS INVOLVED IN PARTICIPANT SELECTION ARE DESCRIBED. THE FOUR ORIGINAL PROJECT OBJECTIVES WERE DEVELOPED INTO 33 SPECIFIC INSTRUCTIONAL OBJECTIVES. A TABLE INDICATING THE NUMBER OF PARTICIPANTS WHO ACHIEVED EACH OBJECTIVE AND THE LEVEL OF ACHIEVEMENT IS INCLUDED. A SAMPLE QUIZ FOR THE MEASUREMENT AND EVALUATION COMPONENT ALSO APPEARS. OBSERVATIONS ARE OFFERED CONCERNING THE ROLE OF THE TRAINERS, DEPARTMENT OF EDUCATION, AND LOCAL EDUCATION AGENCIES AND THE ATTITUDES OF THE TRAINEES. FINALLY, THE REPORT ADDRESSES SOME OF THE PROBLEMS ENCOUNTERED IN THE COURSE OF THE PROJECT AND OFFERS RECOMMENDATIONS FOR POSSIBLE IMPROVEMENTS. (NJ)

DIRECTOR'S FINAL REPORT

VOCATIONAL INSTEP

I. PLANNING

1) Objectives:

A. Objective 1

To provide opportunities for participants to plan, identify and write objectives.

B. Objective 2

To enable the participant to organize and manager materials and experiences for teaching and learning.

C. Objective 3

To enable participants to select and utilize instructional techniques.

D. Objective 4

To enable the participant to devise means to measure and evaluate the effectiveness of programs and the performance of students.

2) Strategies for Reaching Objectives:

A. Participant demonstration in the classroom.

B. Written lesson plans of each participant.

C. Performance in a classroom setting.

D. Written work of the participant and demonstration in the classroom.

E. Individualized EPDA B-2 Modules:

Module I-1 - Defining the Role of the Teacher Aide

Module I-2 - Recognizing How Children Develop

Module I-7 - Using The Library

Module I-8 - Constructing a Resource File

Module I-10 - Completing State and County Forms

Module II-1 - Using Behavioral Objectives

Module II-5 - Selecting Commercial Materials

Module II-7 - Developing an Instructional Package

Module III-2 - Using Lecture Techniques to Present Information

Module III-4 - Establishing Appropriate Frames of Reference

Module III-5 - Increasing Participation

Module III-6 - Feedback

Module III-7 - Nonverbal Behavior

Module III-8 - Stimulus Variations

Module IV-1 - Mini-Pak For Making Assignments

Module IV-2 - Monitoring In-Class Assignments

Module IV-3 - Achieving Classroom Transition

Module IV-4 - Achieving Closure

Module IV-5 - Reinforcement

Module IV-6 - Classroom Management

Module IV-7 - Recognizing and Obtaining Attending Behavior

Module IV-8 - Set Induction

Module V-1 - Question Upgrading Improvement Package

Module V-2 - Using High Order Questions

Module V-3 - Inducing Student-Initiated Questions

Module V-4 - Inquiry Technique: Using Probing Questions

Module V-5 - Pre-Cueing

Module VI-1 - Evaluating Learning and Instruction

Module VII-7 - Utilizing Field Trips for Learning

II. PARTICIPANT SELECTION:

Upon receiving notification of grant approval, the task of recruitment was undertaken. The project director contacted all the school districts from the Apalachicola River west to the Alabama state line. This task proved monumental in that districts had not received enough "lead" time to plan for this type program. Many prospective participants had already made plans for the summer and others had pre-enrolled in various institutes granting credit for participation. A total of twenty-four (24) participants was selected. The selection was based solely upon the need for such training. Of the twenty-four, ten had had some teaching experience and fourteen had had no teaching experience. Two were females and twenty-two were males. All were of the Caucasian race.

	SEX		MARITAL STATUS		ETHNIC BACKGROUND						AGE		
	Male	Female	Married	Single	Black	Spanish Surname	Indian	Oriental	White	Other	18-35	36-50	50-over
Teachers*	20	2	22		0	0	0	0	22	0	5	14	3
Aides													

How many applicants did this program have? 26

How many of the apolicants were accepted? 24

How many did not complete the intensive training program? 2

List reason(s) for those not completing the program.

One secured another job, another was not prepared for teaching.

III. OPERATION:

1) Project Objectives

The four original Project Objectives were developed into instructional objectives which are shown in Section IV.

IV. FINAL STATEMENT:

1) Specific instructional objectives and the actual outcomes:

Scale: 1=Met with a high degree of proficiency; 2=Met to a moderate degree; 3=Met with little proficiency, and 4=Did not meet.

Specific Objectives:	1	2	3	4
1. The participant can describe in general terms the forces which affect and contribute to effective teaching and learning.	4	17	1	
2. The participant can analyze, describe and sequentialize the content he is preparing to teach.	10	10	2	
3. The participant can identify, differentiate between and write in behavioral terms -- course, unit and daily lesson objectives.	10	10	2	
4. The participant can identify, describe and utilize the elements of course, unit and daily planning to prepare course syllabi, unit plans and complete lesson plans (sample) as evidence that he can adequately plan for instruction.	8	12	2	
5. The participant can prepare in detail portions of lessons, utilizing elements and techniques taught in selected Teacher Training Modules, and present for critique one or more portions of lessons.	20	1	1	
6. The participant can list characteristics of adolescents.	22			
7. The participant can list and describe some principles of perception.	8	12	2	
8. The participant can list and discuss some basic motivating forces.	22			
9. The participant can define and give examples of creativity and reinforcement.	10	10	2	

Specific Objectives (Cont):	1	2	3	4
10. The participant can define and give examples of creativity and reinforcement.	15	7		
11. The participant can identify and demonstrate several methods of facility and student arrangement for classroom learning.	15	7		
12. The participant can differentiate various attitudes toward learners and learning.	5	15	2	
13. The participant can describe his attitude toward learners and learning.	22			
14. The participant can identify and demonstrate several methods of instruction.	20	2		
15. The participant can identify the various industrial programs and discuss the merits of each.	10	10	2	
16. The participant can plan a shop within the confines of the space devoted to the occupations.	15	7		
17. The participant can establish management procedures and policies.	5	15	2	
18. The participant can plan for all safety precautions and policies under which they intend to operate.	5	15	2	
19. The participant can discuss and establish procedures for accounting for funds that may generate within their shop.	10	11	1	
20. The participant can discuss and identify the role of the institute in the total guidance program.	5	14	3	
21. The participant can list and discuss the areas of responsibility of the teacher-counselor.	8	10	4	
22. The participant can discuss and select techniques for developing and improving programs utilizing curriculum and community survey techniques.	4	8	10	
23. The participant can identify relative and fixed standards.	3	10	9	
24. The participant can define and differentiate between measurement and evaluation.	10	8	4	
25. The participant can develop a table of specifications.	10	7	5	
26. The participant can identify and construct teacher made tests.	3	17	2	

Specific Objectives (Cont):

		1	2	3	4
27.	The participant can perform an item analysis of a teacher made test.	2	8	12	
28.	The participant can define reliability and validity.	5	5	12	
29.	The participant can calculate measures of central tendency and dispersion.	2	5	13	2
30.	The participant can calculate standard scores.	4	4	11	3
31.	The participant can interpret standardized test results.	2	10	8	2
32.	The participant can evaluate instructor, student performance, and curriculum.	7	15		
33.	The participant can suggest measures for improvement of instructor, student performance, and curriculum.	10	12		

2) Actual Outcomes:

See Number (1).

3) Reason for Discrepancies:

The specific objectives were divided into four components: Planning and Organizing for Instruction; Techniques of Instruction; Management, Safety and Guidance, and Measurement and Evaluation.

Each component had a check list for the trainer to record the progress of the trainee. An example is given below for Planning and Organizing for Instruction:

CHECKLIST FOR COMPONENT I V-INSTEP

____
NAME

1. Reasons for entering teaching ____________________
2. Filmstrip answer sheets and tests (3 sets) ____________________
3. Course Outline ____________________

4. Unit Plan ____________________

5. Lesson Plan ____________________

6. Making Assignment (written plan) ____________________
(answer sheets) ____________________
(presentation) ____________________

7. Notes or answer sheets on "Set Induction" ____________________

8. Any other notes for Component I
(example=notes on "Achieving Closure"
"Monitoring"
"Classroom Transitions" ____________________

* * * * * * * * * * * * * * * * *

COMMENTS ABOUT STUDENTS PROGRESS (STRENGTHS AND WEAKNESSES, DIRECTIONS, ETC.).

In addition, a quiz was given at the completion of each component. The quiz for Component IV, Measurement and Evaluation is shown below:

QUIZ - COMPONENT IV

I. DEFINE:

1. Measurement -
2. Evaluation -
3. Relative or Normative Standard -
4. Fixed or Criterion Standard -
5. Reliability -
6. Validity -
7. Standardized test -

II. LIST:

1. Three major types of Evaluation Procedures.
2. Two measures of central tendency.
3. One measure of Dispersion.
4. Two ways in which you could evaluate your curriculum.
5. Two ways in which you could evaluate yourself.

III. QUESTIONS:

1. John was ranked at the 90th percentile on his tenth grade achievement test. What does this mean in terms of percentile ranking?

2. How would you complete a Standard Score?

It was the desire of the trainers that all participants would meet all specific objectives to a high degree of proficiency. However, due to the individual differences of the trainees, this was not accomplished as was shown in number (1).

4) Follow-Up Evaluation:

Past experience has shown that there is a high rate of "turn-over" in teachers of Industrial Education. A survey was made in June, 1972, to determine how many of the twenty-two (22) trainees were returning to the teaching profession for 1972-1973. All twenty-two had signed contracts to return.

5) Observations which might be helpful to others considering a similar project:

Viewing this project in retrospect, one could only arise at the conclusion that it has been worthy of time, talent and resources expended. However, attention should be given to the built-in techniques for success.

First, two of the three trainers had previously been involved in this type program. These two selected the third member on the basis of his expertise and his compatability with the other staff. Also, since this program was not "course" oriented, the trainers had to work as a team. This was particularly true, due to the varied backgrounds of the trainees. The staff and administration of the University of West Florida should be commended on their willingness to experiment with and field-test new and innovative techniques for teacher training.

Second, the Department of Education has unselfishly given of their talents and resources for success to be insured. Not once has one of the staff been called upon that they did not respond in a positive manner.

Third, the local educational agencies have been most cooperative. Without this element, the project would have been "doomed" from the start. The basis for this cooperation can be found in the fact that the project met an identified need of the agencies. It would be well to state that this project has not completely met this expressed need. As more emphasis is being placed at the local and state level on prevocational and vocational training, the need will continue to exist.

Fourth, the attitude of the trainees was such that it enhanced the instructin they were seeking. All trainees were contracted to a local educational agency and was recommended to the project in terms of their need for training. The "tempo" of the training had to be geared to the fact that many of them had been removed from the classroom for several years. Due to this fact it was mandatory that the components of instruction be individualized. Much instruction had to be done on a one-to-one basis. For this reason, it is recommended that the future programs of this nature be held to a maximum of one to fifteen trainer-trainee relationship.

Fifth, the extensive planning for instruction by the trainers. The four components were planned on a day-to-day basis before the training began. As expected, there were times when it was necessary to deviate from the plan. One of the strong points of the intensive training phase was the individual counseling days. The progress and the problems of the individual trainee could be discussed on a trainee-trainer basis.

The question begins to arise as to what went wrong with the project. It is time for us to address ourselves to this aspect of the project.

First, there was not enough "lead" time for extensive recruiting to take place. In the opinion of the director, a minimum of three months should be spent in recruitment. Due to the late approval of the project, many persons who needed the training were not encouraged to participate. Also, some of the vocational units were not approved and personnel contracted to fill the positions until after the beginning of the intensive training phase.

Second, there would have been more interest in the program had it been conducted in one of the vocational schools of the area. If future programs are to be implemented, it is recommended that this be negotiated with the institution of higher learning concerned.

Third, the components should have some instruction which is geared to the education of adults. It has been found that many of the trainees are involved in teaching adults. The project as planned and implemented had little, if any, training activities for instruction of adults. Perhaps this could be built into Component II.

Fourth, since VICA is an important aspect of all vocational programs, the prospective teacher should be instructed into the role and function of this organization.

Fifth, more emphasis should be placed upon instruction in school finance. Perhaps this could be added as a fifth component.

Finally, the number of common days in the inservice phase should be increased. In fact, for 1972-73 components of inservice have already been written for these people to meet on three days for the sharing of teaching ideas that have worked in their classroom.

6) Final Recommendations to Bureau:

Experience has taught us that it requires two years to develop a model program for teacher-training. The first year is spent in idea development and testing. The second year is spent in revising and field-testing the model. The components (or ideas) developed and tested in this program are now ready for the model development and field-testing. However, due to the "cut off" of funds, we will be unable to complete the task we undertook. It is highly recommended that a two-year funding procedure be initiated.

ACCESSION NUMBER: VT102898

TITLE: CAREER EDUCATION FOR PERSONS IN RURAL AREAS--PRIMARY FOCUS ON ADULTS 16 AND OVER. QUARTERLY REPORT: OCTOBER 1, 1975-DECEMBER 31, 1975.

DESCRIPTOR: *CAREER EDUCATION; *RURAL AREAS; *OUTREACH PROGRAMS; *VOCATIONAL COUNSELING; *ADULT PROGRAMS; CAREER PLANNING; POST SECONDARY EDUCATION; PUBLIC SCHOOLS; INSERVICE PROGRAMS; COUNSELING PROGRAMS; TECHNICAL INSTITUTES; ADULT COUNSELING

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 126P.

ABSTRACT: THE 11-PAGE REPORT SUMMARIZES THE ACCOMPLISHMENTS AND MAJOR ACTIVITIES AND EVENTS INCLUDING COMMUNITY PROGRAMS, MEETINGS WITH CONTACT SCHOOLS, PUBLICITY AND DISSEMINATION ACTIVITIES, PROGRESS IN DATA COLLECTION AND EVALUATION PLANS AND PROCEDURES, STAFF EMPLOYMENT AND UTILIZATION, AND STAFF DEVELOPMENT. DETAILED DESCRIPTIONS OF THESE ACTIVITIES ARE CONTAINED IN THE FIVE APPENDIXES. APPENDIX A CONSISTS OF TABLES DESCRIBING THE ADULT CAREER EDUCATION PROGRAMS AND COUNSELING SERVICES AND A MODEL OF COUNSELING INTERACTION. APPENDIX B, INSERVICE PROGRAMS FOR TEACHERS, INCLUDES CORRESPONDENCE AND THE AGENDA FOR AN ADMINISTRATORS' WORKSHOP AND 15 SESSION REPORTS OF CONTACT MEETINGS WITH SCHOOLS WHICH INCLUDE THE OBJECTIVES AND PROCEDURES, INSTRUCTOR'S MATERIAL/EQUIPMENT, PRINTED MATERIALS HANDED OUT, AND A SUMMARY. DISSEMINATION AND PUBLICITY ACTIVITIES ARE DETAILED IN APPENDIX C, WHICH CONTAINS PRESS RELEASES, CORRESPONDENCE, COPIES OF THE NCTI CAREER EDUCATION NEWS, LIST OF MATERIALS ADDED TO THE RESOURCE CENTER, AND A PROJECT SUMMARY. APPENDIX D, STAFF DEVELOPMENT MEETINGS, CONTAINS THE AGENDA FOR THESE ACTIVITIES. APPENDIX E, DATA COLLECTION AND EVALUATION, CONSISTS OF FOLLOWUP REPORTS ON A CAREER EXPLORATION WORKSHOP AND A CURRICULUM AND METHODS WORKSHOP, TEACHER RESPONSES TO THE EVALUATION OF A MEDFORD AREA RESOURCE GUIDE, AND PRETEST AND POSTTEST RESULTS FROM A CAREER EDUCATION OPINIONNAIRE. Appendix D: Staff Development Meetings

Appendix E: Data Collection and Evaluation

7. Accomplishments

Individual career counseling was continued with 31 North Central Technical Institute English as a second language students, (See Appendix A, Table III) and 33 adult basic education students. (See Appendix A, Table IV).

Twelve members of the North Central Technical Institute alternative to high school class were given individual and group career exploration activities (See Appendix A, Tables I & II).

Area social service and community agencies have been contacted to seek referrals and to assist clients in career counseling.

A questionnaire was sent to project school administrators to determine interest in a career education workshop. (See Appendix B). There was sufficient interest that an administrators' workshop was conducted on December 3, 1975 with 41 representatives from public and parachial schools and North Central Technical Institute. (See Appendix B).

A follow-up study was conducted with participants of the summer "Curriculum and Methods in Career Education" workshop to determine if the units had been used. (See Appendix E).

One of the project consultants appeared on a local television program entitled,"Knowledge for Living". The focus of the program was information on continuing education, and the career education project was explained with regard to its services for adults. This was an excellent way to reach a large number of adults.

The third party evaluators have visited the project three times to attend contact meetings and the administrators' workshop. The evaluation contract has been completed, and evaluation efforts are in progress.

The senior surveys have been distributed and most have been completed and returned. When all have been received,the instruments will be sent to the computer center for analysis and data. A summary report will then be completed.

Contact meetings were held in October and in November at Wittenberg, Phillips, North Central Technical Institute, and Medford. (See Appendix B). School contact persons at the Wittenberg, Phillips, and Medford meetings chose to have consultants visit each district in December as an alternative to a group meeting. The North Central Technical Institute contact group met on December 10. Plans have been made for the January contact meetings.

Weekly visits have been made to the four pilot school districts (Merrill, Colby, Edgar, and Stratford). A variety of career education activities have occurred as a result of this assistance. (See Appendix B).

As a follow-up to the career exploration workshop at North Central Technical Institute in June, 1975, a questionnaire was distributed to a random sample of 50 students. Contact with all of the students was made through school guidance personnel in the 16 public and private schools. The results of the survey appear in a report. (See Appendix E).

Several tours of North Central Technical Institute have been given. For example, 29 eighth graders from Merrill Trinity Lutheran School were shown a slide presentation and visited the various departments in the building. (See Appendix B).

Plans have been made for a class on job application and interviewing to be held in January at North Central Technical Institute for the general public. The class will be conducted by the career education project staff in conjunction with North Central Technical Institute community services.

The NCTI Career Education Newsletter has been disseminated monthly. An additional seven names have been added to the mailing list. (See Appendix C).

Flyers have been distributed describing the Curriculum and Methods in Career Education class to the project school districts. Interest has been displayed by representatives of Phillips, Schofield, Mosinee, and Wittenberg. If enrollment is sufficient the class will be conducted in the communities during the second semester. (See Appendix C).

The associate project director has been attending the North Central Technical Institute coordinators' and instructional service council meetings. This participation has provided an opportunity to become better acquainted with NCTI activities, and to inform NCTI members of career education project programs.

The associate project director has been invited to be a member of the advisory committee for a project on occupational knowledge sponsored by UW-Stout and the Indianhead vocational district to develop career education curriculum for adult basic education. (See Appendix D).

The North Central Technical Institute Career Education Revised Bibliography has been updated through an addendum. These updates will be distributed to personnel in the public schools. (See Appendix C).

Project staff has continued to attend conferences and meetings for professional growth. See Appendix D).

A slide presentation illustrating project activities was completed for the administrators' workshop.

8. Major Activities and Events

WAUSAU ADULT COUNSELING

Probation and Parole Office

Contact was made with the State Probation and Parole Officer to remind his staff of services available from the project. As a result he referred two students to NCTI for adult basic education classes.

Job Service Office

Information about the career education project was presented to a counselor at the Job Service Office. Arrangements were made for the career education consultant to give a talk for AAUW in January.

Conferences were held with employment counselors concerning funding and employment for English as a second language and adult basic education students.

Social Services

A meeting to review career education project services for intake workers at social services was scheduled in January through the intake coordinator.

Community Services

A meeting was held with the Family Services Social Worker regarding publicity and planning for an assertiveness training workshop to be given in April.

A consultation was held with the family service workers on potential referrals for career counseling.

Services of the career education project were reviewed with a member of the Catholic Social Services staff.

Tuesday Morning Mothers Group (Welfare AFDC)

Plans are currently being made to held a series of meetings with the group during second semester.

NCTI Adult Basic Education

Individual career counseling was continued with 31 English as a second language students (See Appendix A, Table III). Students were offered intake, initial, developmental, and follow-up counseling as needed.

Thirty-three adult basic education students were offered intake, initial, developmental, and follow-up career counseling as appropriate. (See Appendix A, Tables IV).

Alternative to High School Class

Twelve potential dropouts enrolled in the alternative to high school class were given group career exploration activities (See Appendix A, Table's I & II). These students also participated in individual exploration of the occupations of their choice.

CONTACT SCHOOLS

Wausau Public Schools

Materials and consultant assistance were given upon request. Wausau teachers, who had attended the Curriculum and Methods workshop in August, were contacted as a part of a follow-up activity to determine the use of units prepared during the sessions. (See Appendix E). A representative from the Wausau schools attended the administrators' workshop.

Marathon, Mosinee, Schofield (Monthly meeting cluster)

Marathon

A contact person from Marathon High School, who teaches vocational English has attended the monthly meetings at NCTI. (See Appendix B). After a visit to the vocational English teacher's classroom, materials were delivered. The contact person has been extremely valuable in communicating workable career education ideas to the Marathon school faculty, as well as, to other contact school personnel. The senior surveys have been completed and returned.

Mosinee

Two contact people from the Mosinee school system, one an elementary teacher and the other a high school teacher, have participated in monthly contact meetings at NCTI (See Appendix B). The high school contact person has visited individual departments to convey ideas exchanged at the contact meetings. The elementary representative was successful in initiating a monthly faculty meeting. At the meetings, an allotted time segment will be used to discuss career education and display materials available through the project.

The senior surveys have been completed and returned. Two representatives were in attendance at the administrators' workshop.

Schofield

Contact has been made with the LVEC for planning and coordination. Flyers describing the Curriculum and Methods in Career Education class offered for UW-Stout credit were distributed through the office of the curriculum director. Two special education teachers, who attended the summary workshop, were contacted in regard to success with their career education units. The LVEC came to the administrators' workshop.

Athens, Abbotsford, Medford, Rib Lake (Monthly meeting cluster)

Athens

A contact person from the Athens Public Schools has attended monthly contact meetings held at Medford. Via communication at these meetings the consultant has furnished materials and films to teachers in this system. Senior surveys have been completed. In December the consultant traveled to Athens to speak with the contact person, teachers, and the elementary principal. Display racks were refilled at this time and materials delivered. Two principals from the district attended the administrators' workshop.

Abbotsford

The guidance counselor has attended monthly contact meetings. The consultant visited the district during December to offer project services. The senior surveys have been completed and returned.

Medford

The monthly meetings have been held at Medford high school. The district owns many career education materials, so this has been helpful in promoting activities. The Medford Area Resource Guide is also in use. (See Appendix E for evaluation results). Senior surveys have been completed and returned.

Rib Lake

The guidance counselor has been in attendance at monthly meetings. Materials have been distributed to the district. The consultant visited the principal in December as an alternative to the regular contact meeting. Senior surveys have been completed and returned.

Antigo, Bowler, Rosholt, White Lake
Wittenberg-Birnamwood

Antigo

The elementary guidance counselor has been present at all contact meetings. (See appendix B). Materials have been delivered for use with career education activities. A career education class using the book "Occupational Essentials" was conducted as a part of the regular social studies class. Senior surveys have been completed and returned.

Bowler

The guidance counselor from this school district has attended the monthly contact meetings held at Wittenberg-Birnamwood high school (See Appendix B). Interest in career education has been shown, particularly on an elementary level, in this school. The contact person invited an elementary teacher to attend the October monthly meeting.

Several teachers have indicated an interest in the Stout Curriculum and Methods in Career Education class. The senior surveys have been completed and returned.

Rosholt

The guidance counselor from this school district has attended monthly contact meetings held at Wittenberg-Birnamwood (See Appendix B). Senior surveys have been completed and returned. During the month of December the associate project director and a consultant met after school with faculty members from the departments of social studies, business, and home economics to discuss the possibility of future articulation with corresponding departments at NCTI.

White Lake

The guidance counselor attended the November contact meeting. (See Appendix B). The faculty was informed about the curriculum and methods course in career education which will be offered in Wittenberg. The consultant visited the White Lake district in December to offer assistance.

Wittenberg-Birnamwood

Monthly contact meetings have been held at this school, with three contact people from Wittenberg attending (See Appendix B). Potential for initiating the Stout career education course for second semester appeard very good, and this possibility is being pursued.

Two teachers who participated in the summer career education workshop were contacted as a follow-up activity to determine use of units prepared in the workshop (See Appendix E).

Park Falls, Phillips, Prentice

Park Falls

The guidance counselor has come to monthly meetings at Phillips (See Appendix B). Materials have been requested and delivered. The consultant visited the district in December and met with the contact person. Materials were also left at the school.

A classroom demonstration and library display was offered to over 150 ninth graders (See Appendix B). The principal and superintendent attended the administrators' workshop in December.

Four people have indicated an interest in taking the "Curriculum and Methods in Career Education" course if enrollment is sufficient. The senior surveys have been completed and returned.

Phillips

The monthly contact meetings have been conducted at Phillips high school (See Appendix B). The elementary guidance counselor is acting as the contact person. The high school and junior high counselors have also been active in the meetings. The consultant visited the contact person at the elementary school in December. A presentation and materials were requested by one of the teachers. The consultant also offered counseling services to a rural disadvantaged adult.

Eight teachers have indicated an interest in attending the "Curriculum and Methods in Career Education" class if it is offered in Phillips. The senior surveys were completed and returned.

Prentice

Although representatives have not attended the monthly meetings, the consultant has contacted the contact persons by telephone, correspondence, and individual meetings. Materials have been requested and delivered. Senior surveys have been completed and returned.

PILOT SCHOOLS

Stratford

A consultant has visited this pilot school approximately once per week. Career Education pre-tests have been administered to grades 3, 6, 9, and 12, and the senior surveys have been completed and returned. Contact with individual teachers has been stressed, and materials have been distributed via this method. The elementary guidance counselor is most eager to establish a more formal career education program, and progress towards that goal is being made. The high school guidance counselor has distributed a memo to teachers listing times and services available from the project consultant (See Appendix B). With this as a basis the consultant has followed through with appropriate services.

Edgar

A pattern of weekly vistis has been established in this pilot school. Career Education pre-tests have been administered to grades 3, 6, 9, and 12, and senior surveys have been completed and returned. Individual meetings with teachers have been the method of approach, with materials being delivered on the same basis. The guidance counselor is planning a unit on job seeking skills (a quarter credit may be offered for this) for next semester. Value exercises from the project have been implemented with small groups.

Follow-up from the October inservice has been conducted and will be continued throughout the school year. An inservice meeting was held with approximately 50 teachers on October 30, 1975. (See Appendix B).

Merrill

In the junior high school a display of materials was prepared for the faculty. The packets on career education from the Eau Claire Public Schools have been used in the ninth grade. A career day is being planned for February. A film program has been implemented which involves the use of one film per week for use during student free time and/or during classes. Many materials have been used in social studies classes.

Learning centers featuring career education materials have been established in the elementary school to encourage independent study. Activities from the elementary guide are currently being implemented. A field trip per month is planned as a faculty inservice program. (See Appendix B).

At the high school individual meetings have been conducted with teachers. Materials such as the American Pie Forum video tapes have been used in the vocational English class. Senior surveys have been completed and returned. Evaluation tests in grades 3, 6, 9, and 12 have been completed.

Colby

In the high school the consultant offered a slide presentation to ninth grade students on programs at NCTI. (See Appendix B). Individual meetings have been conducted with many teachers. The assessment tests have been completed in grades nine and twelve.

In the elementary grades, third grade students took a field trip to Wausau (See Appendix B). Materials have been delivered to teachers and used with career education activities.

9. Problems

Transportation has been a problem in counseling the Vietnamese. Students often are unable to attend sessions or meetings because they cannot drive.

It is difficult to acquire time for group inservice meetings during regular school days (especially since 180 full days of school are now required by state law). Another difficulty is the fact that teachers are on many different levels in their implementation of career education. Thus, it is difficult to ascertain appropriate techniques for assistance.

Often the rural disadvantaged have numerous other problems (family, etc.) which deter their progress in career and educational development.

10. Publicity Activities - Appendix C

Newspaper articles appeared in the Wausau Daily Herald.

Announcements of project activities have appeared in the NCTI "Target."

Flyers were sent to project schools announcing the class, "Curriculum and Methods in Career Education" for UW-Stout credit. These announcements were to be returned by teachers to determine if enrollment reached the number necessary to hold the classes.

Letters and agendas were sent to approximately 65 public and private school administrators informing them of the administrators' workshop. Forty-one persons attended the workshop where a presentation was given on services offered through the project.

One of the project consultants appeared on a local television program entitled, Knowledge for Living. The focus of the program was information on continuing education. The career education project was explained with regard to its services for adults to generate further referrals for career counseling.

A consultant was interviewed regarding assertiveness training programs for women. Parts of the interview were shown on the local news broadcast for Channel 7 television on December 2, 1975.

An article describing the project was published in the National Vocational Guidance Association Newsletter in September of 1975. Several requests for information have been received as a result of this article.

As a result of the response to a questionnaire by the associate project director, a description of the project will appear in a catalog prepared by American Institutes for Research in the Behavioral Sciences.

11. Dissemination Activities

Career education materials were disseminated to school personnel by consultant delivery, mail, or pick-up by the borrower. Concerted efforts have been made at pilot schools to encourage use of project materials. An addendum to the Revised Bibliography has been completed to inform potential users of new materials. (See Appendix C).

The career education news was disseminated to approximately 685 individuals. (See Appendix C). Free handout materials have been distributed at contact meetings, group inservice meetings, and individual meetings.

Flyers, goals and objectives of the project, and other suitable materials were sent to all persons requesting information (See Appendix C, for example of request).

The associate project director has completed four questionnaires pertaining to project activities. In addition, two lengthly telephone interviews have been given to assist with adult counseling projects (See Appendix C for letter of recognition).

Approximately ten requests for materials have been received from individuals outside of the project area. These have been filled when feasible, or assistance has been given to help in finding information or materials.

The state career education consultant from the Department of Public Instruction visited the project site to request assistance with materials for a career education project at Ohio State University. The associate project director will cooperate with this request.

The project director has held several meetings with special educators to provide them information and assistance in proposal writing for career education.

12. Progress on Data Collection and Evaluation Plans and Procedures

The senior surveys have been completed and returned, with the exception of two districts. Cards are being punched at the computer center and results will be tabulated in January.

Administration of evaluation instruments have been completed in pilot schools. The Assessment of Career Development by the American Testing program was administered to designated ninth and twelfth grades. The Career Education Cognitive Questionnaire from the University of Minnesota was given to designated third and sixth graders. The Self Observation Scales were also given to the third and sixth grades.

The raw data from the "Evaluation of the Medford Resource Guide" has been tabulated (See Appendix E).

The results of the "Career Education Opinionnaire" pre and post tests have been tabulated from the summer career education workshop for school personnel. A short report has been prepared on the data. (See Appendix E).

A report has been completed on the follow-up of the participants of the summer Career Education Curriculum and Methods Workshop. (See Appendix E).

13. Other Activities

N/A

14. Staff Employment and Utilization

Peggie Mallery has returned to part-time status upon completion of her maternity leave. Ruth Hase and Peggie Mallery have adult counseling as their primary responsibility. Public school inservice is the major assignment of John Brasch and Kathy Morris.

15. Staff Development

All members of the career education staff attended Business, Industry and Education Day in Wausau (See Appendix D).

Two consultants attended meetings at the Wisconsin Personnel and Guidance Association conference at Stevens Point. (See Appendix D).

One consultant visited the Eau Claire Public Schools to do further observation and acquire career education packets for use at Merrill Public School (See Appendix D).

The associate project director attended a conference in Madison from October 15 through October 17, 1975 on "Career Placement - Job and Education." (See Appendix D).

CAREER EDUCATION GROUP ACTIVITIES
ALTERNATIVE TO HIGH SCHOOL CLASS
(12 students)

TYPE OF ACTIVITY	MATERIALS OR RESOURCES USED	PURPOSE
Resource person	U. S. Army Recruiter	To explore various career opportunities in military service.
Resource person	Data Processing Instructor	Explore computer science area.
Resource person	Data Processing Manager	Explore computer science area.
Resource person	Police Science	Explore career opportunitites in police science.
Resource person	Mature NCTI student	To emphasis importance of high school education and work experience - positive attitude.
Exploration tours	Auto mechanics Auto parts Welding Residential design Machanical design Printing design Machine tool Media labs Health	Instructors talked to students to give them information on North Central Technical Institute courses and talk about characteristics of these occupations.
Field trip	Drott Manufacturing	Drott personnel gave students a tour to explore various jobs.
A.V. materials (filmstrips)	Why Am I Afraid to Tell You Who I Am?	To acquire better self-understanding.

TABLE I (Con't)

CAREER EDUCATION GROUP ACTIVITIES
ALTERNATIVE TO HIGH SCHOOL CLASS
(12 students)

TYPE OF ACTIVITY	MATERIALS OR RESOURCES USED	PURPOSE
A.V. materials (filmstrips)	Livelyhoods	To acquire information on occupations
A.V. materials (Kit)	SRA Information Kit	To acquire information on occupations
A.V. materials (filmstrips)	Choosing Your Career	To acquire information on occupations
A.V. materials (film)	Future Shock	Better inderstanding how change and employment changes life style.
Discussion group	Specific requirements for jobs	Career exploration awareness
Discussion group	High school education (course selection)	Career preparation
Discussion group	Attitudes	Better understanding of courses and self
Letter writing	To Technical schools	Specific information on programs offered at the technical schools.

TABLE II

INDIVIDUAL CAREER EXPLORATION ACTIVITIES TO HIGH SCHOOL CLASS

STUDENT	AGE	TYPE OF EXPLORATION*
Male	16	Welding - Auto Mechanics - Machine Tool
Male	17	Residential drafting, mechanical drafting, truck driving, military service, welding
Male	17	Scuba diving, military service
Male	16	Agriculture mechanics, machine tool
Male	17	Audio-visual materials, TV repair, electron personal support
Male	16	Auto mechanic, welding, drafting, computer science
Female	15	Auto mechanics, Ag-auto parts
Female	18	Police Science, commercial art, office work
Male	16	Heavy machine, printing
Male	18	Truck driving, diesel mechanic
Male	16	Military services, machine tool, welding
Male	17	Data processing, police science

* Outcomes are not indicated as the immediate objectives is to keep students interested, so they do not drop out of class. Presently, all students have remained with the program with better than usual attendance.

TABLE III

INDIVIDUALIZED COUNSELING OF ENGLISH AS A SECOND LANGUAGE CLASS

SEX	AGE	TYPE OF COUNSELING	EMPLOYMENT	OUTCOME
Male	24	Intake - Initial - Developmental	Student-NCTI	Enroll fulltime electronics-NCTI
Male	26	Intake - Initial - Developmental	Scottie Home Furnishing	Enroll NCTI Machine Tool
Female	26	Intake - Initial - Developmental	At home	Continue ABE Seek employment
Male	19	Intake - Initial - Developmental	Tailoring	Continue ABE Seek tailoring
Female	22	Intake - Initial - Developmental	At home	Enroll NCTI Clerk Typist
Male	37	Intake - Initial - Developmental	Bartig Printing	Continue ABE Printing course

Male	26	Intake - Initial - Developmental	Unemployed	To take welding NCTI
Male	23	Intake - Initial - Developmental	Unemployed	Continue Englis classes
Female	35	Intake - Initial - Developmental	At home	Supportive services
Male	30	Intake - Initial - Developmental	Marmet Window Company	To take Archite ture at Univers
Male	41	Intake - Initial - Developmental	Wausau Hospitals	To take further medical trainin
Male	64	Intake - Initial - Developmental	Unemployed	Supportive enrichment serv
Male	30	Intake - Initial - Developmental	Dental Office	To take dental Hygiene - Vo. T
Male	24	Intake - Initial - Developmental	Unemployed	To take printin course - NCTI

* All students are Vietnamese refugees with the exception of two who are from Russia.

TABLE IV

INDIVIDUAL CAREER COUNSELING
WITH
ADULT BASIC EDUCATION STUDENTS
AND
OUTSIDE REFERRALS

STUDENT	AGE	TYPE OF COUNSELING	OUTCOME
Male	18	Intake interview	Attending ABE - working for GED
Male	26	Intake and initial interview	Brushing up on skills in ABE, will enter residential design in fall
Male	53	Intake and initial interview	Improving basic skills in ABE
Female	29	Intake, initial, developmental and follow-up interview	Working for GED and improvement of coping skills in ABE
Female	27	Intake and initial interview	Working for GED in ABE
Male	30	Intake and initial interview	Working for GED in ABE
Female	18	Intake and initial interview	Working for GED in ABE
Female	33	Intake, initial, developmental	Attend ABE - brush up on skills. Will enter Clerk Typist program.
Male	37	Intake, initial, developmental	Improving skills in ABE
Male	31	Intake, initial	Improving skills and seeking employment

TABLE IV (Con't)

STUDENT	AGE	TYPE OF COUNSELING	OUTCOME
Female	25	Intake, initial	Attending ABE - will enroll in clerk typist program
Male	17	Intake, initial, developmental	Reading improvement and career exploration in ABE
Male	18	Intake, initial	Working for GED in ABE
Female	32	Intake, initial	Working for GED in ABE
Male	19	Intake, initial	Working for GED for future employment
Female	40	Intake, initial	Self improvement (learning to write) in ABE
Male	28	Intake, initial	Working for GED in ABE
Male	25	Intake, initial, developmental	Working for GED in ABE
Female	27	Intake, initial, developmental	Working in ABE to get drivers' license
Female	34	Intake, initial, developmental	Working for GED in ABE
Female	27	Intake, initial, developmental	Improving basic skills to seek employment
Male	19	Intake interview,initial interview	Attending ABE - going into full-time developmental program 2nd semester
Female	17	Intake interview, initial interview, follow-up	Attending ABE - working for GED as alternative to high school

TABLE IV(Con't)

STUDENT	AGE	TYPE OF COUNSELING	OUTCOME
Male	21	Intake interview, initial interview, career exploration, developmental	Working for GED in ABE
Female	24	Intake, initial, developmental	Working for Self-improvement in ABE
Male	39	Follow-up activities (mostly on self-improvement)	Working for self-improvement in ABE
Female	30	Intake interview, initial interview, career exploration, follow-up	Attending ABE for self-improvement, may be interested in more courses
Male	49	Intake interview, initial interview, developmental	Attending ABE working for GED to seek employment due to back injury
Male	30	Intake, initial interview, follow-up	Attending ABE - improving basic skills because of back injury
Female	34	Intake interview, initial interview	Self improvement through basic skills in ABE
Male	22	Intake interview, initial interview	Attending ABE to acquire GED for future employment
Male	30	Intake interview, initial interview, career exploration in health occupations	Attending ABE - Planned to enter Health occupations - left program
Female	21	Intake interview, initial interview. Follow-up in career exploration and assistance in enrolling in classes at NCTI	Acquired employment as a dishwasher. Entered sewing and cooking class at NCTI - attended ABE and improved skills - left program

TABLE IV (Con't)

STUDENT	AGE	TYPE OF COUNSELING	OUTCOMES
Female	35	Intake, initial interview, developmental and follow-up. (Personal support and career exploration with respect to career change)	Enrolled at NCTI in Data Processing
Male	22	Intake, initial, and developmental, (Career exploration, financial aid, coord. other services - support counseling and interest tests)	Will go through work evaluation on Voc/Rehab. funds and enter NCTI developmental on CETA funds
Feamle	37	Intake, initial, developmental (Personal career exploration and financial aid)	Enrolled in NCTI Computer Center
Female	35	Intake, initial, developmental (career exploration)	Career change pending
Female	32	Intake, initial, developmental (career exploration)	Enrolled in NCTI - clerk typist
Male	35	Intake	Assisted with information for career due to injury. Given information to locate source of public assistance.

RESEARCH AND DEVELOPMENT

October 24, 1975

Dear Administrator:

We hope to conduct a one-day workshop on career education for superintendents and principals involved with our project. The purpose of the meeting would be to demonstrate to participants ways in which they can promote and implement career education within their district as a part of the regular curriculum on a limited budget.

We are planning to start the meeting at 9:00 a.m. and conclude by 3:00 p.m. Lunch will be provided for those who attend.

In order to plan the session to meet your needs, we would like you to complete the enclosed questionnaire and return it to us by November 7.

Thank you for your assistance. We hope to have further information to you in the near future as we feel that this project is worthwhile.

Sincerely,

Lois F. Gilliland

Lois F. Gilliland

RESEARCH AND DEVELOPMENT

November 18, 1975

Dear Administrator:

We would like to invite you to the career education workshop sponsored by North Central Technical Institute on December 3. Enclosed is the agenda for the meeting. The purpose of the workshop is to show problems and concerns of the business community which can be met with career education.

We are delighted to have Mr. Donald Dean from Madison as our keynote speaker. He has had experience as a school administrator, as well as, experience in business. We also have a panel of representatives from business and industry which should prove both stimulating and informative.

Since we will be asking a speaker to come from Madison, it is necessary to know the number of persons who will attend. Please return the enclosed card by November 25, so that we can do our final planning. We are most enthusiastic about the workshop and certainly hope to see you there.

Sincerely,

Lois F. Gilliland

RESEARCH AND DEVELOPMENT

October 31, 1975

Dear

As a part of a follow-up project, Pat Wagner from UW-Stout, who conducted our summer career education workshop, has asked me to obtain information concerning your use of the career education units which you prepared during the session. Enclosed is a questionnaire which we would like to have completed. Any random comments which you have would also be helpful.

It was certainly a pleasure working with you this summer. We hope that the workshop has proven beneficial to your teaching and that you are having a pleasant year. Your cooperation in returning the questionnaire by November 14 will be appreciated. Please call the career education office, telephone 675-3331, Ext. #210, if we can be of assistance to you.

Sincerely,

Lois F. Gilliland

CAREER EDUCATION WORKSHOP QUESTIONNAIRE

Name ______________________________ School ______________________________

Position ___________________________ Career Ed. Unit ________________________

Please check the appropriate answer:

1. Have you used your career education unit which you completed in the summer workshop at NCTI? Yes _____ No _____
2. Do you feel that it enhanced your teaching? Yes _____ No _____
3. Were the students positively responsive to the activities? Yes _____ No _____
4. Have you made additions to the unit? Yes _____ No _____
5. Did the activities prove to be relevant to the student's needs? Yes _____ No _____
6. Do you feel the unit would be helpful to other teachers in your field? Yes _____ No _____
7. Were community agencies cooperative in helping you? Yes _____ No _____

Please state your reaction to the following:

With whom did you use your unit?

What are the strengths of your project?

In what ways can the project be improved?

What were student and/or other reactions to the activities?

What are any additions or changes that you have made in the unit?

How would you use the unit differently in the future?

If community agencies were involved, how did they help with the unit?

What problems or cooperation did you have from other school personnel (administrators or teachers) in the implementation of the project?

Additional comments (Anything you feel might be helpful to use in evaluating the practicality of the career education project in the actual teaching situation)

SESSION REPORT

NCTI (Location)
I (Session #)
October 16, 1975 (Date)

Contact Persons (Type of Group)
7 (Attendence)

Objectives and Procedure:
Organizational meeting to familiarize contact people with the projects' goals and objectives for the year, and the format of the monthly meetings to follow.

Instructor's Material/Equipment:

Printed Materials Handed Out:
Career Education Project Goals and Objectives
U.S.O.E. Policy Paper: An Introduction to Career Education
Career Education National Standard
Syllables of Career Education Course offered through UW-Stout
Senior Career Interest Surveys
Revised Bibliographies

Summary of Session:

The above materials were distributed, followed by a discussion of ways to best motivate teacher interest in career education and the most effective link of communication regarding this in each school. Mosinee suggested a visit by the career education staff to a school board meeting, seeing as there are five new members on that board. Interest in the Stout course was discussed and feelings toward organizing an administrator's workshop were very positive. Liz Daviedczyk discussed the class she conducts called Vocational English. Many ideas she uses were exchanged, such as utilizing local teachers and administrators as resources, total student participation in all activities from the ground up, and developing English skills via letter writing to inquire about certain job fields. Attending the meeting were: 1) Pat Page, Mosinee High School; 2) Chris Kampa, Mosinee Elmentary; 3) Liz Daviedczyk, Marathon High School; 4) Judy Boda - 5) Reuben Eckert, Wittenberg High School; 6) John Brasch, NCTI, and 7) Kathy Morris, NCTI.

The meeting adjourned, with the next meeting scheduled for Nov. 12 at 1:30 at NCTI.

Kathy Morris
(Consultant)

SESSION REPORT

Medford (Location)
I (Session #)
October 16, 1975 (Date)

Contact Meeting (Type of Group)
6 (Attendence)

Objectives and Procedure:

Instructor's Material/Equipment:

1) Relate to contact people the goals and objectives of project
2) Pass out hand outs to them
3) Discuss class (UW-Stout) and administration workshop
4) Possible Articulation

Printed Materials Handed Out:

Senior Survey
Revised Bibliography
Snoopy Ex: (2)
Goals and Objectives sheets

Summary of Session:

All schools in attendence (released time seems to be a problem with Abbotsford). The next meeting will be Novemeber 11 at 2:00 p.m. at Medford. Everything went well, except for a bit of negstivism in the discussion following the meeting as to the role of guidance person. We found Medford and Athens people positive.

Present at the meeting were:
- Fay Yost - Medford High School Guidance Counselor
- Tom White - Abbotsford Public School Guidance Director
- Dan Wanish - Rib Lake Guidance Director
- Steve Lundstrom - Athens Public School Instructor
- Kathy Morris } NCTI
- John Brasch }

SESSION REPORT

Wittenberg	1	October 9, 1975
(Location)	(Session #)	(Date)
Contact Persons		11
(Type of Group)		(Attendence)

Objectives and Procedure:

Organizational meeting to familiarize contact people with the project's goals and objectives for the year and the format of monthly meetings to follow

Instructor's Material/Equipment:

Printed Materials Handed Out:

Career Education Project Goals and Objectives
Senior Career Interest Survey
UW-Stout Career Education Course Syllabus
Revised Bibliographies

Summary of Session:

Methods that would be the most effective way to utilize each school's contact person were discussed. Both Bowler and Rosholt felt departmental meetings and individual contact with specific teachers would be useful. Bowler expressed interest in an inservice, possibly for 1st semester. Rosholt will pursue the idea of a K-8 Parent night. Wittenberg stressed its need for individual workshops at discipline levels.

The outline of the career education course offered through UW-Stout was distributed. Contact people will survey interest as to this course by next month's meeting. The goals and objectives of the project were reviewed, with discussion centering around the possibility of an administrators workshop and/or regional workshop. A questionnaire pertaining to these potential workshops will be circulated at the next meeting.

Bowler requested information and career education activities to give to staff and also requested suggestions as to how to make a previously unsuccessful Career Day a success this year.

The meeting was adjourned with the next contact meeting scheduled for Nov. 13 at 2:00 p.m. at Wittenberg.

SESSION REPORT

Phillips High School (Location)
I (Session #)
October 8, 1975 (Date)

Contact People (Type of Group)
5 (Attendence)

Objectives and Procedure:

Discribe project goals and objectives
Senior survey
Stout class offered
Articulation(NCTI-High Schools)

Instructor's Material/Equipment:

Filmstrips and cassetts
Snoopy overlays
Children Learn What They Live
Bibliography
Occupational Essentials

Printed Materials Handed Out:

Revised Bibliography
TV & Radio Program format
U.S.O.E. Policy Papers
Goals and Objectives in Career Education
Materials Sign out Sheet
Career Education Class Information

Summary of Session:

Prentice and Park Falls representatives did not come because of testing in there respective schools. However, a letter was sent to them and their superintendent about the meeting. Phillips Elementary and Middle school requested materials. Also the middle school would like a presentation to their teachers the first week in November. A goal of having two instructors implement career education into the classroom, etc! The flexibility of the class from UW-Stout was discussed.

Present at meeting were :

Bruce Gould - Phillips High School Guidance Director
John Wilke - Phillips Elementary and Middle School Guidance Counselor
John Brasch }
Kathy Morris } NCTI

Objectives and Procedure:	**Instructor's Material/Equipment:**
Collection of Senior Surveys Materials Display	Curriculum Guides Filmstrip Sets (GA) Kits

Printed Materials Handed Out:

Fifteen Career Education Clusters

Developmental Chart

Elementary School Career Education Program

Summary of Session:

Senior Surveys were collected. Judy Foust, a teacher from Stratford who is successfully implementing career education into her curriculum, visited the group and had many observations and suggestions to lend. Materials were on display and on the basis of browsing through what is available, requests were taken. One member of the group has been successful in reserving time during each faculty meeting to present thoughts and materials on career education. Another group participant is interested in having the Career Education staff speak to his school board. Next month's meeting was scheduled for December 10. Each contact person will bring along one or more teachers for an exchange of ideas session.

Persons present at this contact meeting were: Pat Page, Mosinee; Kris Kampa, Mosinee; Liz Dawiedczyk, Marathon; Judy Foust, Stratford; Peggie Mallery, NCTI; Lois Gilliland, NCTI; and Kathy Morris, NCTI.

Objectives and Procedure:	Instructor's Material/Equipment:
Collection of Senior Surveys	Curriculum Guides
Materials Display	Filmstrip Sets (GA) Kits

Printed Materials Handed Out:

Random materials from free handouts offered through NCTI.

Summary of Session:

Senior Surveys were collected and topics of discussion then focused on information the contact people were to gather for this meeting. Articulation was discussed and both Bowler and Rosholt are interested in involving their business education and social studies departments. (Bowler wants to also include their home economics department. More information pertaining to the Career Education Course offered through UW-Stout was requested. Consequently, more detailed information regarding this course will be sent. Individual visits to these contact schools will be made by the consultants' during the month of December. The January meeting will be held in Wittenberg on January 15th and will be devoted to an exchange of ideas, with elementary being the focus, contact individuals will either present materials or invite teachers involved in career education in their schools to speak to the group.

Contact persons present at this meeting were: John Brasch, NCTI; Lois Gilliland, NCTI; Kathy Morris, NCTI; Bill Kubeny, Antigo; John Cherny, White Lake; Hope Moreland, Witt.-Birn.; Judy Boda, Witt.-Birn.; Reuben Eckert, Witt.-Birn.; Neal Gould and 6th grade teacher (Dave); and Earl Holm, Rosholt.

SESSION REPORT

NCTI (Location) III (Session #) December 10, 1975 (Date)

Contact Group (Type of Group) 7 (Attendence)

Objectives and Procedure:

Discussion of each contact persons progress, visitors from contact schools.

Instructor's Material/Equipment:

Printed Materials Handed Out:

Parents and Career Education CE071

Summary of Session:

Each contact person contributed to the meeting by relating their individual progress. The contact from Mosinee elementary has been instrumental in implementing a monthly faculty meeting at which time she presents career information and distributes materials furnished through the project. The Mosinee high school contact is speaking at departmental meetings and is presently acting as a laison to arrange a time when the career education staff can speak with the Mosinee School Board (something seen as a most important step by this contact person). The contact from Marathon brought along the Exceptional Education teacher (formerly called Special Education).

Kathy Morris
(Consultant)

Before leaving the meeting she was shown relevant materials and checked out a number that she felt would be beneficial. A report on the Administrators' Workshop held recently at the Holiday Inn will be relayed by the contact people to those administrators who did not attend. The date for the January meeting was set for the 14th.

Contact persons present were:

Lois Gilliland - NCTI
Kathy Morris - NCTI
John Brasch - NCTI
Pat Page - Mosinee
Liz Daviedcyzk - Marathon
Kris Kampa - Mosinee
Exceptional Education Teacher - Marathon

SESSION REPORT

Edgar (Location)

In-service (Session #)

October 30, 1975 (Date)

Total Teaching Staff (Secondary & Elementary (Type of Group)

Approximately 52 teachers (Attendence)

Objectives and Procedure:

Teacher inservice devoted to the subject of curriculum planning. Small group discussion served as the format, with the career education staff attending on a consultant basis.

Instructor's Material/Equipment:

Printed handouts pertaining to each major subject area, guides, filmstrips, and kits.

Printed Materials Handed Out:

Materials were distributed by each consultant to the following groups: Home Economics, Physical Education, Science, Math, Social Studies, Business and English.

Summary of Session:

This was a workshop devoted to the subject of curriculum planning. The career education staff attended on a consultant basis. In order to promote a greater exchange of ideas, teachers broke into small subject matter groups consisting of teachers from grades K-12, with K-5 teachers having the option to choose the subject area in which they wanted to work. Consultants joined these groups and infused suggestions for career education implementation wherever possible.

54 firms, 1,000 educators to take part in BIE Day

The 27th annual Business - Industry - Education Day will take place Tuesday in the Wausau area. Sponsored by the Manufacturers Council of the Wausau Area Chamber of Commerce, BIE Day affords area educators the opportunity to tour firms and learn about business problems and operations.

Fifty - four firms will be hosting nearly 1,000 teachers and school administrators in the afternoon. School children will be dismissed between 11:30 a.m. and 1:45 p.m. so the educators may tour the businesses.

In addition to the tours, six seminars will be offered at Holiday Inn. Sponsored by the CTL Co., Intercity State Bank, Kraft Food, 3M, and Wisconsin Valley Improvement Co., the seminar topics will be community development, economic development, health resources development, downtown development, regional planning and consumer business.

All educators from Wausau public schools, all parochial schools, North Central Technical Institute, and the University of Wisconsin Marathon Center, will meet their hosts at 1 p.m. at the Wausau West High Fieldhouse. After a brief meeting, the hosts will lead their guests on a tour of their firms.

All D.C. Everest Elementary educators will go directly to their host firms at 1:30 p.m. after their classes have been dismissed. D.C. Everest Middle and High School educators will meet their hosts at their firms at 2:30 p.m.

Following the tours, and the alternative seminars, the educators and their tour guides will either return to the fieldhouse or go directly to the Holiday Inn for socializing from 4:30 until 6:30 p.m.

Chairman of this year's BIE Day is James Olsen.

No lunch will be served at any of the Wausau district schools Tuesday. The schools that will be dismissing classes at noon are Stettin, Maine, Rib Mountain, Horace Mann and Wausau East High. All other schools in the Wausau district will dismiss classes at 11:30 a.m.

In the D.C. Everest district, all elementary schools will be dismissed at 1 p.m. The middle school will close for the day at 1:30 p.m., followed by the high school at 1:45 p.m. Lunch will be available at the D.C. Everest schools.

TO: Debbie Bradley

FROM: Lois F. Gilliland, Associate Project Director

SUBJECT: National Career Guidance Week

RELEASE: As soon as possible

This week from November 16-22 has been named National Career Guidance Week by the National Vocational Guidance Association. National Career Guidance Week is a major annual event which is designed to actively involve state and local counseling and guidance groups, and focus on the centrality of work in our lives. Its purpose is to enhance public awareness and uses of career guidance services.

The career education project at North Central Technical Institute offers career guidance activities to twenty school districts and also to rural disadvantaged adults. Individualized counseling is provided for the unemployed, underemployed, high school dropout, employed adult who is dissatisfied with his job, and the mid-career adult.

Consultants will help participants with information needed to obtain work, self appraisal, career exploration, educational and training requirements, and current career trends. Programs will be offered to groups upon request. If you would like more information, please call Lois Gilliland at 675-3331, Ext. #210.

Lois Gilliland
Editor

Published monthly through the career education project, North Central Technical Institute
1000 Schofield Avenue, Wausau, Wisconsin 54401

NOTE FROM THE EDITOR

Recently we have completed our yearly initial visit to the twenty school districts which we serve through the career education project. The visits were quite fruitful due to the exchange of ideas which occurred. Comments made by administrators illustrating ways in which we could more effectively serve their school district and community were especially helpful.

The increased enrollment in the adult basic education program, which includes twenty-one Vietnamese refugees studying English as a Second Language, is keeping the career education staff busy with adult career counseling. These adults have been visiting classes at North Central Technical Institute to become more aware of career options available. We certainly appreciate the cooperation of NCTI instructors in this endeavor.

****

DATES TO REMEMBER

October 8 - Meeting of contact persons in Phillips at 2:00 p.m.

October 8 - "Women Today - Changing Roles and Goals" - presented to faculty wives of John Muir Junior High

October 9 - Meeting of contact persons in Wittenberg at 2:00 p.m.

October 15 - Meeting of contact persons at NCTI at 2:00 p.m.

October 16 - Meeting of contact persons in Medford at 2:00 p.m.

October 16, 23, and 30 - Assertiveness Training Workshop at Y.M.C.A. from 10:00-11:15 a.m.

****

NEW INSERVICE IMPLEMENTED

By Kathy Morris

On September 26th, a new approach in teacher inservice was initiated at North Central Technical Institute. Twenty-six teachers from the Stratford school system (grades 7-12) were bused in to participate in a variety of activities geared to expose them to the world of work. The day's activities began with the film, "You Pack Your Own Chute", followed by a tour of North Central Technical Institute. The events of the morning culminated with a panel discussion: Employment Trends: How Schools Can Help the Student in the Decision-Making Process. Members of the panel lending their observations were: Don Abbott, Drott; Pam Fullerton, Job Services; John Cook, Manpower Planning; and Jim Vilendrer, NCTI.

The afternoon was spent touring the Wausau Paper Mills Company at Brokaw. This tour was highly effective in giving the teachers insight into jobs with which they were unfamiliar, or had only read about.

As several other schools have indicated interest in this type of approach, it is hoped that this inservice will serve as the forerunner of many more of its type.

ADVISORY COMMITTEE MEETING

By Lois Gilliland

Thirteen persons participated in the first quarter career education advisory committee meeting at North Central Technical Institute on September 17. The group was welcomed by Dr. Russell Paulsen who also introduced the new career education consultants. Slides of the Youth Work Experience Workshop were shown and explained by Lois Gilliland.

A group discussion was held on the goals and objectives of the project for the coming year. These included the involvement with adult basic education and English as a Second Language in adult counseling and the new approach to school inservice through the contact person at a monthly meeting.

At this point the group divided. Representatives from Community Action program and Marathon County Social Services discussed various needs and interests with a career education consultant while the group of school representatives discussed inservice, classes for university credit, and plans for the coming year.

****

Y.M.C.A. PROGRAM

By Peggie Mallery

"Women Today- Changing Roles and Goals" was the topic of a program given at the Wausau Y.M.C.A. on Thursday, September 25. Some of the issues touched upon included new choices for women at home and work, stereotypes: myths or facts?, career education and the parents' roles, and some effects of the women's movement. Materials were available dealing with these subjects and many women browsed through these following the talk and filmstrip. The NCTI career education project was explained and our services clarified for the audience.

Most of the women who attend these programs enjoy sharing their feeling and ideas on the subject. The same topic will be the focus for the John Muir Middle School faculty wives in October.

CAREER COUNSELING FOR ADULTS

By Ruth Hase

Presently fifty-nine adults enrolled in adult basic education, English as a Second Language, and an alternative for high school classes at NCTI - Wausau, are receiving counseling through the career education project. Many other adults request career counseling through referrals from community agencies or self referral. Clients come to the counseling sessions with a variety of social histories, and career aspirations. This service is designed for a group that is poorly served by traditional methods.

Planning, preparing for, and finding a career can be a difficult experience. Not only are individual life situations and the demands of the work world constantly changing, but career development itself is a complex process. Unfortunately, most adults try to manage this process on their own because they have little or no access to the kinds of comprehensive career education and counseling services that could help them develop the necessary skills. The situation is especially difficult for adults who spend much of their time at home and therefore have little contact with sources of career related information and assistance.

Most clients express similar needs for the following: 1) A better understanding of their own interests, abilities, values, and goals; 2) Facts about career trends, opportunities, and requirements; 3) Information about the available education and skill training opportunities; 4) Information about sources of help in such related problem areas as financial support, discrimination, child care, and testing; and 5) Help in developing and implementing career plans.

The service is available to anyone interested in career development. If you desire career counseling, or know a person for referral, contact the career education office at 675-3331, Ext. #210.

****

CURRICULUM AND METHODS IN CAREER EDUCATION CLASS

The class, Curriculum and Methods in Career Education, will be offered at your school upon request provided ten teachers are willing to participate. Scheduling is flexible according to the needs of the group. Two graduate credits will be granted from UW-Stout at a total cost of $81.

The course is designed to familiarize the student with the career education movement, its concepts, objectives, techniques, and effects on our society. It will include investigation of ways to incorporate occupational, educational and personal-social information into the school curriculum (K-12); preview and/or development of career education materials; investigation of programs of community involvement in career education; and the definition of individual roles in career education.

The class is geared to meet the needs of each educator. Each participant will develop a unit or materials which can be used in the classroom. If you wish more information, call Lois Gilliland at 675-3331, Ext. #210.

****

GROWING OPPORTUNITIES

Careers in agribusiness and marine science offer exciting opportunities in a wide variety of jobs, including research and development, production, processing, marketing, storage, and distribution. For those interested in helping to fill the world's empty food bowls, the challenge is immense and rewarding.

Quote from: Career World, Vol. 4, No. 1 September, 1975.

****

SCHOOLS VISITED

By John Brasch

During the past three weeks, superintendents and contact persons at Park Falls, Phillips, Prentice, Rib Lake, Medford, Abbotsford, Colby, Antigo, White Lake, and Merrill have been visited by this consultant.

The implementation of career education in the elementary, junior high school, and senior high schools was discussed with the various contact personnel in their respective schools. Many schools have already expressed a desire for materials. Therefore, a master calender is being prepared so that all schools can be given equal opportunity to use all materials available.

The career education staff at NCTI would like to thank the administrations of the schools involved for their positive attitudes and cooperation shown.

****

CLUSTER MEETINGS FOR SCHOOLS

By Lois Gilliland

Recently administrators from the ca[illegible] education project school districts [illegible] requested to send one or more contact persons to a monthly meeting. Each session will include representatives from three or more districts chosen because of geographic location. The first meeting will be used as a planning meeting for the remainder of the year's activities. Later agendas will cover such subjects as field trips, curriculum infusion, media usage, articulation, career exploration, inservice and use of resource persons. Other areas will be reviewed as requested by participants in the group.

Through this arrangement the contact person will be able to act as a liason between project consultants and school personnel. With this plan, it is hoped that consultant time will be used more efficiently while offering appropriate services to meet the needs of each district.

NOTE FROM THE EDITOR

Occasionally we find when visiting a school district or adult service agency, that everyone is not aware of the services which are offered through the career education project. Listed below are some of the ways that career education consultants can assist you.

Services offered to schools:
- Teachers' inservice (workshops, classes, etc.)
- Coordination of field trips and resource persons
- Classroom demonstrations
- Coordination of teachers' meetings for idea exchange
- Bringing and recommending materials
- Assisting in curriculum writing
- Individual assistance
- Career exploration workshops
- Articulation activities
- Displays or career meetings for parents

Services offered to rural disadvantaged adults:
- Individual counseling
- Small group counseling and meetings
- Career exploration field trips and workshops
- Interest tests
- Tours of NCTI
- Referral to other agencies for help
- Large group programs
- Joint programs with social service and community agencies.

The above listing is somewhat general. If you would like more specific information or a unique type of assistance, please call Lois Gilliland at 675-3331, Ext. 210.

NATIONAL CAREER GUIDANCE WEEK

NOVEMBER 16 - 22, 1975

EDGAR TEACHER INSERVICE

By Kathy Morris

Thursday, October 30, 1975, Edgar Public Schools held a teacher inservice devoted to the subject of curriculum planning. The career education staff attended this inservice on a consultant basis. The major thrust of the curriculum planning was to provide for scope, sequence, short and long range planning, and evaluation in each specific area of instruction. In order to promote a greater exchange of ideas, teachers broke into small subject matter groups consisting of teachers from grades K-12, with K-5 teachers having the option to choose the subject area in which they wanted to work. Consultants were invited to join these small groups and to infuse suggestions for career education implementation wherever possible. The consultants felt that this was highly beneficial for all involved, and particularly felt that this approach gave them a better insight into the philosophy and goals of the Edgar Public Schools, which allows them to work more effectively with the teachers.

****

COLBY

By John Brasch

An administrative meeting was held recently at Colby High School. Present were the superintendent, elementary supervisor, high school principals, guidance personnel, and two career education consultants. Plans for implementation and services available from the North Central Technical Institute career education project were presented as a part of the regular monthly session. The administrators agreed to have the district involved as a pilot program. The junior and senior high school and Unity Elementary school will be used as pilot schools. We here at North Central Technical Institute are looking forward to having an opportunity to provide the Colby school system with our services.

****

EAU CLAIRE TOUR

By John Brasch

Recently I made a trip to the city of Eau Claire to visit the public school system. Of course, I had a particular interest in the implementation of career education into their curriculum. To say the least, it was a very enriching day. I was treated very courteously, and everyone was very helpful.

Mr. C. Stanford, Administrative Assistant, met me at the Board of Education building. After a short update and phone call by him, I was off to Central Junior High School. There I met the principal, Mr. Michealson, who explained how their mini-course system works along with its good and bad points. At Central Junior High School, I was introduced to Mr. L. Bennett, guidance counselor. Our discussion was mainly one of whether there was general student and instructor acceptance of the mini-program.

There seemed to be a positive feeling among nearly all instructors,and of course the students think its great. The one drawback seems to be scheduling,which is very tricky even though they are on a modular system.

Mr. Bennett introduced me to Mr. Bates, who is a political science instructor. Presently he has incorporated into his class a three-week career education unit. He will be doing this in December. He also uses a packet system (about three weeks per packet) with his students along with their regular class work. These packets are not used in any way for grades, which saves the instructor extra work. I found everything very organized and professional and would recommend a visit to the Eau Claire Public Schools to all those interested in implementing career education into their curriculum.

There is nothing so easy but that it becomes difficult when you do it with reluctance.

***

ADMINISTRATORS WORKSHOP

A questionnaire pertaining to a career education workshop has been sent to administrators of the twenty school districts involved with the career education project. Administrators were requested to indicate their choice of activities, location, and date for the session. Results will be compiled so that participants will have direct input into planning the meeting.

The session will consist of a one day meeting to be held in early December. The purpose of the workshop will be to demonstrate to participants ways in which they can promote and implement career education within their district as a part of the regular curriculum on a limited budget.

****

FUTURE ACTIVITIES

Nov. 3 - Career Education display in Merrill at faculty meeting at 3:00 p.m.

Nov. 4 - Talk for elementary teachers in Colby at 3:00 p.m.

Nov. 5 - Contact meeting at Phillips at 2:00 p.m. (includes Park Falls and Prentice)

Nov. 6 - Presentation and display for ninth graders at Park Falls from 9:00 a.m. to 3:00 p.m.

Nov. 11- Contact meeting at Medford (includes Rib Lake, Athens, Abbotsford) at 2:00 p.m.

Nov. 13- Contact meeting at Wittenberg at 2:00 p.m. (includes Antigo, White Lake, Bowler & Rosholt)

Nov. 12- Contact meeting at NCTI at 1:30 p.m. (includes D.C.Everest Marathon and Mosinee)

Nov. 21- Tour of North Central Technical Institute at 9:00 a.m. by the Trinity Lutheran School in Merrill.

PILOT SCHOOLS

By Lois Gilliland

In order to determine the impact of career education with students in the public schools, a revised evaluation plan has been devised by project staff and third party evaluators. To get a more accurate measurement of the effect of career education activities, it was agreed that more comprehensive attention to certain students was necessary. It was decided that four school districts should be used for this more specific evaluation.

Through the assistance of the third party evaluation team the following districts were chosen as pilot schools to be evaluated in grades 3, 6, 9, and 12: Edgar, Merrill, Colby and Stratford Public Schools. Consultants will visit these districts approximately one day per week to assist teachers. A variety of services will be offered according to the needs and requests of the teachers. These services are also available upon request to all of the school districts within the project.

A pre-test and a post-test will be administered to students in one elementary school and to one-half of the students in the ninth and twelfth grades in each of these districts. The Career Education Cognitive Questionnaire K-3 and 4-6 from the University of Minnesota and Self-Observation Scales, Primary and Intermediate Level from National Testing Service, Incorporated will be used with elementary students. The Assessment of Career Development from Houghton-Mifflin Company will be used with high school students.

Results will be sent to testing centers for computation. These results will indicate growth of students, career areas which need more stress, success of specific activities, and overall impact of the complete program.

HIGH SCHOOL STUDENTS AT NCTI AND CAREER DEVELOPMENT

By Ruth Hase

(Editor's Note: Ms. Hase is current doing career counseling with 14 high school students attending NCTI as a part of an alternative educational program contracted through the Wausau Public Schools.)

Many students want to know: "Must everything be planned?" "Why can't things just happen?" "Why do you have to plan a career?" "Why can't you do your own thing?" Through career education activities at NCTI, students are gaining more insight with respect to these problems.

Exploration, understanding, and action are the ingredients of a lifelong living and learning process, which is what career education is all about. The purpose of career education is to equip students with the skills they need in choosing a career for themselves.

Students at North Central Technical Institute are learning about career alternatives available to them. This process involves finding different sources of career information; exploring required activities of their occupational choice; acquiring functional information and relevant values for choosing occupations. As a result, the students will be able to make more systematic and quantifiable career choices. This career development gives impetus to their achievement as students, as employees, and above all, as human beings.

The goal for the program at North Central Technical Institute at present is exploration - to get these students to explore themselves in the areas of their concern. To facilitate the students' development opportunity is provided to explore the programs at NCTI, to take field trips to area industries, to hear speakers in various careers, and to seek information through a variety of audio-visual resources.

**** NCTI CAREER EDUCATION NEWS ****

Vol. 2, No. 4
December, 1975

Lois Gilliland
Editor

Published monthly through the career education project, North Central Technical Institute
1000 Schofield Avenue, Wausau, Wisconsin 54401

NOTE FROM THE EDITOR

During the first semester much of the emphasis in adult counseling has been on individual counseling with adult basic education students, Vietnamese in the English as a Second Language class, and students in the alternative to high school class on the NCTI-Wausau campus. Approximately 75 of these students have received career counseling and assistance from project staff.

Presently we are planning for the adult career activities for second semester. One of the options which we are considering is a career exploration workshop for adults. The format for the meeting would be similar to the workshop which was held for Y.W.E. youth (article in this edition). However, the meeting will last for only one day.

Adults would be given the opportunity for hands-on exploration of several occupational areas. An interest test will be administered as appropriate to the needs of participants. There will be no charge for the sessions.

We would appreciate comments or suggestions relating to this type of workshop for adults. It is important that we determine interest in the project before doing extensive planning. If you know of persons who would benefit from such a workshop, please contact Lois Gilliland, at 675-3331, Ext. #210.

May the magic
of Christmas
last all year!

CAREER COUNSELING THE VIETNAMESE AT NCTI

By Ruth Hase

There are presently thirty Vietnamese refugees enrolled in English as a Second Language class receiving career counseling services at NCTI through the career education project. A large number of these Vietnamese speak some English. Several, however, speak almost no English. (Their own language is tonal using levels of pitch to make distinctions in meaning.)

Many of the Vietnamese here are well educated and had status in their homeland; some were wealthy. The Vietnamese have been uprooted from places where they had family ties dating back hundreds, in some cases, thousands of years. They are now anxious and upset. Many have been separated from family members. The majority of the refugees identify themselves as Buddists. Their culture places a high premium on disciplined acceptance of things as they are. Complaints are rarely heard. They are used to a monsoon climate with rather consistant average temperatures of 77-86.

Attempts are being made to help the refugees get placed on jobs or post-secondary education drawing on their experiences in Vietnam. A few have been placed in various jobs, and employment is being sought for others in the Wausau area. Several Vietnamese are presently being evaluated and counseled for entry into programs at NCTI or UW-Marathon Center. Few have school records or credentials of any kind with them. All need financial aid to enable them to pursue schooling. Some economic classes have been organized for the women (and men) to help them with basic food, clothing, and child care problems. There is a need for volunteer services.

****

TOUR OF NCTI

By Kathy Morris

As the introductory step to a classroom unit on career exploration, 29 eighth graders from Trinity Lutheran School in Merrill were bused into North Central Technical Institute on Friday, Nov. 21. The morning's activities began in the TV studio with a slide presentation that informed the students about the various program offered here at NCTI. This was followed by a brief question and answer period conducted by Jim Hanson of Student Services.

The group was then divided into three sections and each went with a consultant for a tour of the building. This activity was particularly beneficial, as the curiosity of the students produced many questions about this institution and careers in general. Very few of these students were aware that NCTI is as large as it is and that such a variety of programs are offered. Hopefully, many more students of this age group will have the opportunity to participate in similar activities, as this is a crucial age with respect to formulating ideas about various occupations.

****

PRESENTATIONS & DISPLAY AT PARK FALLS HIGH SCHOOL

By John Brasch

On November 6, a classroom presentation and a display of North Central Technical Institute's course selection, as well as, career education materials were presented by Kathy Morris and John Brasch in the Lincoln High School at Park Falls.

The classroom segment was presented to the Frosh English classes. The presentation was a value clarification of certain careers and a film entitled, "Where the Action Is". Both seemed to be well accepted by the students. The library display was also accepted as there were many inquiries by students throughout the day. All in all, it was an enjoyable day, and the staff look forward to future presentations. If any district schools would desire a similar program, please feel free to write or call, as it would be our pleasure to provide one.

WORKSHOP FOLLOW-UP

by Peggie Mallery

Last June 150 high school students in the Youth Experience program participated in a Career Exploration workshop held at North Central Technical Institute. During the three-day workshop, students explored a variety of career areas through various media and "hands-on" activities. The career education project staff at North Central Technical Institute was pleased that the results of student evaluations showed positive feelings on the part of the students toward their experiences here.

A follow-up survey with a random sample of 50 students is now being conducted. This follow-up is being done to facilitate students' career planning and to collect information to influence future workshop plans. In previous follow-up surveys, it was found that students did remember specific career-related experiences at the workshop and held positive attitudes about their experience as a whole. They became aware of the importance of and need to make realistic career plans.

In addition to the follow-up survey, the project staff hope to conduct more intensive career exploration activities with a few of the students who attended last summer. These activities would be related to specific career areas identified by the students and on an individual basis.

****

LOOKING AHEAD

The job market for welders looks great through the mid-1980's. The federal Labor Department expects "rapid employment increase" due to growth of metal working industries and a wider use of welding. About 27,200 openings are anticipated each year in the next decade. Welding is an occupation more women should consider as work that has flare.

DOWN THE ROAD

The outlook for careers in diesel engine appears good. The occupation is expected to grow at a faster than average rate. The U.S. Labor Department estimates annual job openings will be 4,500.

(From Career World, Nov. 1975)

****

CONTACT MEETINGS

By Lois Gilliland

Contact meetings were held in November at Phillips, Medford, North Central Technical Institute, and Wittenberg by Kathy Morris, John Brasch and Lois Gilliland of the Career Education staff. Participants attending the meetings consisted of contact persons from the sixteen contact schools involved with the career education project.

Senior surveys were returned to the consultants. The results of these instruments will be tabulated to determine changes in student career decision-making in the past three years.

Discussion was held concerning the administrators' workshop which will be conducted on December 3rd. Comments were made concerning format and attendance at the meeting.

The UW-Stout Curriculum and Methods in Career Education class has been publicized in most of the school districts. Districts which have displayed most interest in the course are Phillips, Wittenberg, and D. C. Everest.

Several people requested materials to be used at the schools. These materials will be delivered to them at the next contact meeting.

A format for the January meeting was adopted. Most of the contact persons felt that they would like to bring representatives from their schools to hold an idea exchange. The Wittenberg cluster of schools chose to emphasize elementary school activities. The Phillips group decided information on placement would be an appropriate topic.

CAREER EDUCATION CLASS

TITLE: Curriculum and Methods in Career Education 413-735

CREDIT: Two graduate credits through UW-Stout - Coast $81.00

INSTRUCTORS: Career Education staff at North Central Technical Institute

LOCATION: D. C. Everest High School - Room 120

SCHEDULING: Starts Monday, February 2, at 6:30 P.M. Flexible - weekly class, Friday and Saturday workshop, after school meetings, independent study, inservice, or others as decided by the group.

COURSE DESCRIPTION: This course is designed to familiarize the student with the career education movement - its concepts, objectives, techniques, and effects on our society. It will include investigation of ways to incorporate occupational, educational and personal-social information into the school curriculum (K-12); preview and/or development of career education materials; investigation of programs of community involvement in career education; and the definition of individual roles in career education.

CHOICE OF ONE OR MORE ACTIVITIES:

Development of a unit, plan, materials or games to use career education in the classroom.

Development of a district-wide or school plan of implementation.

Development of a program to publicize and make board of education, administrators, and teachers aware of the career education movement.

Reading and writing a critique or giving an oral report on one additional book or periodical articles on career education.

Others as requested.

PRESENTATIONS OFFERED TO THE CLASS:

Presentation by experts on career education

Optional student reports

Demonstration and reviewing of current audio-visual and printed career education materials including numerous handout materials.

Demonstration of exercises for classroom use in career education.

If you plan to take the class, please return this form to:

Keep Informed And Get Involved

MID-LIFE CAREERS PROGRAMS

Starting with this issue of the *Newsletter*, the NVGA Commission on Mid-Life Careers is presenting an ongoing column on, "Mid-Life Career Programs." This column is intended to share information about current programs. A wide variety of programs are underway throughout the country to help adults find new educational and vocational paths in their middle and older years. A combination of social and economic factors, such as the lengthened life-span, early retirement, the womens' movement, technological change, the energy crisis and recent unemployment, have encouraged institutions and individuals to develop new strategies to meet adult career needs. Some of the programs which have been communicated to the Commission to date include the following.

Lawrence Livermore Laboratory of the University of California has developed a career planning and guidance process to help employees plan for future changes in their career fields. The program includes career planning and guidance workshops, counseling, interest testing and self-help through use of a career planning manual.

Mid-South Career Development Center in Nashville, Tennessee, has established a program for individuals to examine their whole life as it relates to occupational planning and development. An ecumenical church related occupational guidance and consulting service, the Center helps those considering leaving pastoral ministries, those contemplating entering a church-related profession, and those who seek guidance in establishing meaningful career goals.

Wholeperson, a personal assessment and career guidance program, has been established in Seattle, Washington. The program has been working with families and individuals to help them establish new life-style patterns which may incorporate career changes.

The **Career Education Project,** a telephone counseling service for home-based adults in Providence, Rhode Island, has established a series of five manuals which are designed to help those who are operating or building an adult career counseling center. The manuals give step-by-step guidelines for developing outreach, counseling, research and evaluation, and resource center functions.

North Central Technical Institute in Warsaw, Wisconsin, provides career education programs for adults in rural areas. The emphasis is on offering career exploration, self-appraisal and informational services. An important target group is those who are at mid-career points in their lives.

If you have materials about a mid-career counseling program which you would like to share with others or would like more information on programs described in this column, please contact: **Alan D. Entine, Assistant Academic Vice President, State University of New York at Stony Brook, Humanities Building, Room 111, Stony Brook, New York 11794.**

AMERICAN INSTITUTES FOR RESEARCH

December 3, 19[illegible]5

Lois F. Gilliland, Associate Project Director
North Central Technical Institute
1000 Schofield Avenue
Wausau, Wisconsin 54401

Dear Ms. Gilliland:

Approximately one year ago, you provided the American Institutes for Research (AIR) with information on your career planning and development program for adults. With support from the U.S. Office of Education, AIR conducted a national survey of Adult Counseling programs and is now in the process of developing a catalog of approximately the one hundred most promising approaches. This catalog will be disseminated nationally. We are pleased to inform you that we would very much like to include a description of your program in the catalog.

Enclosed you will find a Xerox copy of the description we have written on your program. This is only a draft and we would appreciate your reading the description and making any changes which you feel are necessary. We want to make certain that we accurately reflect your program so please feel free to edit, make deletions or additions, etc.

Please return the copy with your changes on it as soon as possible so that we may proceed with the catalog production. We were very impressed with your program and hope that you will be pleased to have it included in the catalog.

Sincerely,

Laurie Harrison Ganschow
Associate Research Scientist

Enclosure

P.S. A bit of information we would like to include in the description of your program would be any evaluation data you may now have as regards your program.

The catalog is scheduled to go to print shortly. Your prompt response to this request will be greatly appreciated and will insure that your program is included in the catalog. Thank you again for all your help.

COUNSELING AND PERSONNEL SERVICES

November 26, 1975

Ms. Lois F. Gilliland
Career Education Project
North Central Technical
Institute
1000 Schofield Ave.
Wausau, WI 54401

Dear Ms. Gilliland:

I want to express my personal appreciation to you for your participation in our telephone interviewing and your helpfulness in sharing with me your knowledge and experiences in the area of counseling adults. I am confident that the data we collected in this way will contribute significantly to the development of the training module for counselors in this area.

The field test for the project will be conducted in the fall of 1976 and the final materials will be compiled by December 1976.

If you are interested in the results of the project, you can contact Dr. Nancy K. Schlossberg, Department of Counseling and Personnel Services, University of Maryland or Mr. Niel Carey, Maryland State Department of Education after that date.

Again, thanks for your help.

Sincerely,

Carole W. Minor

Career Education for Persons in Rural Areas

North Central Technical Institute
1000 Schofield Avenue
Wausaw, Wisconsin 54401

PROGRAM GOALS Entry or reentry into the job market; Job-getting and job-maintenance skills; Career decision-making.

PROGRAM SIZE AND TARGET POPULATION This program is aimed at and serves 3,000 to 5,000 individuals a year, about 50% of whom live in rural areas. Forty percent of the participants are men, 60% are women, and virtually all are white. Three-fourths come from families in the low-income range with the remainder coming from the middle-income range. Persons who are unemployed or under-employed, mid-career persons, women, high school dropouts, or parents come to group sessions or seek indiviudal counseling on the basis of brochures, handouts, a monthly newsletter, a community outreach program, and a media and publicity campaign.

YEAR STARTED The program was started in 1973 as a federally-funded career education project of North Central Technical Institute.

STAFF The program staff consists of a Project Director, an Associate Project Director, and four Career Education Consultants. Staff duties and responsibilities include keeping abreast of current career information and materials, community programs and resource persons; performing publicity and public relations work; organizing and conducting programs, workshops and seminars; preparing program materials; and conducting indiviudal and group counseling.

FACILITIES, MATERIALS, EQUIPMENT The program works out of the North Central Technical Institute, but many of its programs and group activities take place in and through community and service agencies. Its community outreach programs utilizes schools and libraries in an attempt to reach rural citizens. Materials utilized include commercially available written materials, films, filmstrips, vocational interest tests, and career information. A variety of staff-prepared and compiled materials provide career planning and placement information, educational benefit and financial aid information, and an area resources guide. Materials are primarily geared toward teachers, adults over 16, and women.

MAJOR FEATURES The program features career education counseling to a broad range of adults. The program offers individual, small and large group counseling, and small and large group programs featuring films, panel discussions, and demonstrations in an attempt to meet the different needs of a wide variety of adults. Other services provided to adults besides counseling include information about educational and occupational opportunities; career exploration workshops and materials; self-appraisal in the form of counseling and testing; few materials relating to job opportunities and educational and training requirements; financial aid and Veterans' benefits information; and GED classes, testing and diplomas. A special program for women explores new career options for women and teaches job-getting and maintenance skills through large group programs, individual counseling, and small informal discussion groups.

The program also offers services to teachers of grades K through 12. Services include inservice training meetings and workshops, classroom demonstrations, curriculum materials and activities, individual meetings, assistance with career education program development, and an area resources guide.

In its attempt to convey career development information to adults in rural areas, especially those in the lower-income bracket, the program features constant and wide publicity including newspaper articles, flyers, a monthly newsletter, radio announcements, and radio talk shows appearances by the program staff. The staff also works closely with community service organizations and schools both in determining needs and reaching potential clients.

EVALUATION

While a formal evaluation has not been conducted at this time, the program staff feels from the advancement of many of their clients that the program is a success, particularly since it is difficult to reach adults in rural areas.

Dear Sir:

Having seen an article in the September, 1975, NVGA "Newsletter" about your adult career education programs for adults in rural areas, I became interested and would like to have some more detailed information.

Please send whatever information you feel necessary to better understand and evaluate your program for possible adoption.

Thank you in advance. Have a nice day!

Yours truly,

September 18, 1975

Dear Educator:

Wausau Area Business and Industry welcome you to the 27th Business-Industry-Education Day slated for:

TUESDAY, OCTOBER 14, 1975

PROGRAM

1:00 P.M. Assemble at Wausau West Fieldhouse at 1200 W. Wausau Avenue to meet your host firm.
1:30 P.M. Depart for tours with your hosts to individual firms.
4:30-5:00 P.M. Return to Wausau West
4:30 to 6:30 P.M. Gather at Holiday Inn for social gathering

Representatives of Wausau Area Business and Industry consider B-I-E Day a unique opportunity to tell their story to you. Strengthening the relationship between education and the business community certainly can contribute to the progress of this area.

We will strive to provide a most informative afternoon for you and are looking forward to your participation.

Please complete and return the attached form to your Principal by October 1. Indicate your first, second and third preference...as well as list the firms you have visited the past three years. Some community seminars have been added to accommodate those of you who have visited most of the business firms over the past 27 years.

We look forward to sharing with you what we hope to be an informative afternoon for all.

Sincerely,

Jim Olsen

James Olsen, Chairman
Business-Industry-Education Day
sponsored by Manufacturers Council

**********************************WORKSHOPS***

For the third year, WPGA will offer extended workshops within the conference period. The purpose of the workshops will be to promote professional development, either for personal growth of the participant or to enhance the participant's ability to work with his clients. The meetings will be conducted by experienced experts in the field, and indivisuals attending will have ample opportunity for interaction and concentrated involvement. Because of the added expense for this type of meeting, a $6.00 fee (unless otherwise indicated) will be charged in addition to the registration payment. See the registration from for details. Since the workshops are set up on a first come-first basis, advance registration is desirable.

Pre-test and Post-test Results from Career Education Opinionnaires

CAREER EXPLORATION WORKSHOP FOLLOW-UP

By Peggie Mallery

INTRODUCTION

In June, 1975, 150 area high school students in the Youth Work Experience program participated in a Career Exploration workshop held at North Central Technical Institute. During the three-day workshop, students explored a variety of career areas through various media and "hands-on" activities. A follow-up survey with a random sample of 50 students was conducted in November to facilitate students' career planning and gather information for future workshop planning. The results of this survey are found in this report.

TARGET POPULATION DESCRIPTION

Table I represents the distribution of the 50 students surveyed. A total of 16 different schools, public and private, were represented. Counseling staff were contacted in most of the schools to administer the questionnaire. Wausau Area schools received onsight visitation by a career education consultant.

The current status of the 50 students was of interest to the project. Three students had graduated from high school, and of these three, one is enrolled at NCTI and one at UW-MC. Four students had dropped out of school for various reasons, while no information was available on three other students because they had not worked during the summer in the Y.W.E. program. Two students did not complete the survey. A total of 29 students were enrolled in school, attended the career exploration workshop, and responded to the questionnaire. Therefore, the return of workshop data was 58 percent.

TABLE I

Random Sample Distribution

Number of Students	Schools Attending
4	Wausau West High School
8	Wausau East High School
1	John Muir Junior High
2	Mosinee High School
2	D. C. Everest High School
1	Newman High School
5	Marshfield High School
2	Auburndale High School
1	Rosholt High School
2	Pittsville High School
1	Witt.-Birn. High School
1	Amherst High School
7	Stevens Point High School
4	Lincoln High School Wisconsin Rapids
5	West Junior High School Wisconsin Rapids
1	Assumption High School Wisconsin Rapids

SURVEY RESULTS

Students were asked to recall any information they had learned at the workshop and to relate two or three examples. The following table represents the students' answers with respect to the number of examples they related.

TABLE II

Knowledge Obtained at Workshop

	Number of Students
One Example	4
Two Examples	9
Three Examples	9
Total	22

Students were asked to recall the names of the units in which they had participated. Approximately one-half of the students remembered three or four units. This information is represented in the following Table III:

TABLE III

Students' Recall of Units

Number of Units Recalled	Number of Students
Couldn't remember any	2
One unit	1
Two units	3
Three units	7
Four units	7
Five units	4
Six units	4
Seven units	1
Total	29

The perceived benefits of the workshop by students with respect to helping them make post high school plans was the focus of question #2. Twenty students said they knew what they were going to do after high school; four students weren't sure; and five students had no plans. Ten students said the workshop was a help to them in making their future plans, while 13 students felt the workshop was no help to them in their career decision-making. Most of these students did, however, feel the workshop was a good career exploration experience and said they enjoyed it.

The students did not have many "other comments" or suggestions for future workshops. A few students suggested better organization for the registration of people during the first morning. Any other comments that were made reflected a positive feeling about their experiences.

SUMMARY AND CONCLUSIONS:

In this survey, as in a previous follow-up survey, students did remember specific career-related experiences at the workshop and held positive attitudes about their experiences as a whole. They have become aware of the importance of and need to make realistic career plans. They have a greater awareness of NCTI and the programs available for study.

The low percent return of questionnaires due to the previously sighted reasons on page 1 of this report reinforced some ideas that this writer held. Those are that these youth as a group seem less stable in terms of family location and personal/social development, are more often lower achievers, and take less initiative and responsibility than one might expect from youth of their ages.

Registration for the workshop has been disorganized in the past workshops despite efforts on the part of the career education staff to conduct pre-registration. Some of the problem lies with the youth for the same reasons listed above. Staff will continue efforts to co-ordinate and conduct pre-registration. The workshop may be held later in June after the students have been working for a week at their summer jobs. This would facilitate greated coordination with Youth Work Experience supervisors and parents as well as smoother registration.

In all, students, staff, and parents felt the workshop was a valuable experience and presented viable alternatives for post high school years. A third workshop is in the planning stages for next June.

As follow-up to the workshop last June, more exploration activities are being planned for 25 students who participated last summer. These 25 students will be referred by the CESA office and will probably spend a day at North Central Technical Institute this spring semester.

FOLLOW-UP REPORT ON THE CAREER EDUCATION WORKSHOP FOR TEACHERS AND ADMINISTRATORS

This follow-up study of sixteen participants of a one-week workshop was conducted to determine if the educators actually used the units; if the units needed revision; if the teachers and students had positive feelings toward the units and career education; and if administrators and community members were supportive in the development and implementation of the units. The findings will also indicate ways in which the units assist in the implementation of career education. This information will be helpful to career educators in developing the agenda or format for a workshop, inservice, or class.

This report includes the background, format and outcomes of the workshop, follow-up on use of the units, and conclusions and recommendations. The questionnaire, table of returns, agenda, list of workshop participants, and project guidelines can be found in the appendix.

Background

The second career development workshop was sponsored by the North Central Technical Institute career education project, Career Education for Persons in Rural Areas - Primary Focus on Adults 16 and Over, from August 18-22, 1975. The workshop was offered through UW-Stout for two credits. Dr. J. Patrick Wagner of UW-Stout acted as workshop director assisted by three members of the NCTI career education staff. Sixteen teachers from six school districts were in attendance at the sessions. (See appendix I).

Format and Outcomes of the Workshop

The workshop offered a variety of experiences including assistance from school resource persons from Eau Claire, Watertown, Augusta, and Mondovi. These resource educators shared their experiences in career education implementation through panel discussions, individual presentations, and group discussions. A panel of persons discussing the world of work included representatives from the Job Service Office, Area Manpower Planning Board, Marathon Cheese, Drott Manufacturing, and North Central Technical Institute student. The state consultant from the Department of Public Instruction presented "Career Education in Wisconsin", a slide presentation emphasizing the career education concepts. These experiences plus interaction with the workshop director and career education staff stimulated thought and provided background for individual projects.

Much of the time during the workshop was unstructured, so participants had an opportunity to take advantage of resources appropriate to their unit. Some of the activities pursued were viewing media of the career education project, visiting local community agencies and businesses to acquire information and cooperation, exchanging ideas among participants and conferring with career education staff members. (See agenda, appendix II).

Participants were informed about individual project guidelines (See Appendix III) and planned their units on a contract basis with the workshop director or career education staff members. Most of the units were completed at the end of the week. Some students from the same district worked in pairs. The completed units included the following:

Development of a Career Awareness Week in a Secondary School as it Relates to Curriculum.

Parent Education Booklet for Parents of Deaf Children Enabling Them to Develop Career Education Concepts in the Home.

The Rise of Labor (Career education in history)

Development of Career Education Concepts (Career education in home economics)

Careers in Distributive Education

Career Education Activities/Third Grade

Activities in Career Education (Preparation for entering the job market)

Wausau Has Careers for You (Resource Guide)

The Rise of Big-Business (History Unit)

Development of Accounting Career Concepts

Career Education in the Kindergarten

An Individualized Audio-Visual Introduction to Various Careers. (For middle school special education)

Follow-up on Use of Career Education Units

During October and November workshop participants were contacted through a letter (See appendix IV and a questionnaire, See appendix V) or an interview. Responses were received from fourteen of the teachers involved in the sessions. One of the educators who did not respond did not complete his unit. The other teacher is located in the other end of the state making the interview approach impractical.

In answer to the question, "Have you used your career education unit which you completed at the summer workshop at North Central Technical Institute?", ten of the participants indicated that they had used their units. Two of the teachers remarked that they had not had sufficient time to acquire administrative support to implement their plan which involved the entire high school. They plan to meet with administrators second semester. A business teacher indicated that he was not teaching accounting the first semester but hoped to use his accounting unit next semester. The instructor of business education in the junior high school did not use his unit with students as he was working with other members of the department to write an entire curriculum guide for business with his accounting unit as a part of it. He did complete the questionnaire where it was relevant. (See appendix, Table I). Ten teachers indicated that they felt that the unit had enhanced their teaching by making it more interesting. They also indicated that students were positively responsive to the activities. One instructor noted that not all students found the activities useful. Another found students more responsive to some activities than others. According to the survey and interview results, additions had been made to four of the units. Four participants had not expanded their units. Two teachers had modified their units to meet the needs of the students.

All responses showed that the teachers found the units relevant to the student's needs. Most (9) of the teachers indicated that they felt the unit would be helpful to other teachers in their field. Two instructors indicated they did not understand which teachers were included in the question.

Community agencies were shown to be cooperative on five of the returns. Community involvement was not necessary to the success of the project on the other responses. (See appendix VI, Table I)

Units were used with the following students and/or teachers and parents: 1) a kindergarten class, 2) the humanities department and seventh grade home economics classes, 3) members of the business department in curriculum development, 4) deaf students and their parents, 5) freshmen exploratory classes, 6) sophomore U.S. history classes, 7) EMR seniors, 8) sophomores in U.S. history II, 9) middle school special education students, and 10) ninth grade drafting students.

Some comments made by teachers on strengths of the projects were as follows:

> "It gives special education students an idea of jobs available in the community."

107

> "Children actually seeing people working at various occupations."
>
> "Variety of ideas to choose from - activities geared to junior high."
>
> "Completeness on a category (accounting careers) where very little materials are available."
>
> "It's the only one (Career Education Booklet for Parents of the Deaf) in the field that's ever been written for parents."
>
> "The job applications were the most impressive thing to the students."

Most of the teachers indicated that they were pleased with the results of their projects.

Teachers indicated their projects could be improved in a variety of ways. Some units needed expansion while others were too long. One teacher indicated less reading and more doing things would be appropriate. Other comments were: "needs to be adapted to lower level students; language could be improved and more specific helps added; needs more time to use it; and needs more student activities."

The following are comments of teachers indicating the reactions of students to the activities:

> "Thought that it was a "great guide!"
>
> "Favorable."
>
> "Reactions were very favorable. A tour of North Central Technical Institute was also taken. The students were very pleased."
>
> "They seemed to enjoy."
>
> "Children are enthusiastic."
>
> "The ones that were used were quite well accepted."
>
> "Very enthusiastically received by parents - especially those of older deaf children."
>
> "Some positive, some negative."

As can be noted from the comments, students were enthusiastic about career education activities and actively participated in them.

Additions that were made to the units were in the form of more A.V. materials, such as additional slides. Most of the units had not changed at the present time, and teachers indicated that they needed more time to use them to determine need for change.

Four teachers indicated that they would use the unit differently in the future. One teacher felt that he would expand his unit to have students check out various businesses for possible jobs, take tours of businesses, and ask businessmen to speak on the jobs. Another participant remarked that a community panel, student prepared career surveys, and a visitation of a factory situation should be added. A drafting instructor indicated that he would break his unit up as the class periods were too short to cover sections of the unit. A teacher indicated that she would use more resource people, and another instructor felt a need for more student involvement activities.

In general it was indicated that school administrators were cooperative. One problem cited was lack of funds to reproduce a unit. One example of excellent community cooperation was a slide tape series of local occupations developed by a team of special education teachers. More than 200 slides were contributed by community businesses. In addition teachers were offered handbooks, brochures, and resource visits by personnel to speak to students (See appendix V for statement by teachers)

Conclusions and Recommendations:

Teachers were evidently agreeable with the individualized contract method used in the workshop. There were no negative comments concerning the way the units were assigned or the method of preparation involved.

All of the participants with the exception of two have used or intend to use their career education units. Most of the teachers were very enthusiastic about career education and the project. Students also were receptive to the activities according to the questionnaire returns. It was gratifying to note that teachers were making plans to modify, enlarge or change their units as needed for improvement. It was also helpful to note that school administrators and community personnel were, for the most part, cooperative and encouraging to the teachers.

From these findings one would assume that development of a unit in a workshop is a viable, positive way to increase or maintain teacher enthusiasm and knowledge about career education. The project is also an effective means of stimulating integration of career education into the regular subject matter curriculum as the activities are planned during the workshop; thus alleviating time spent in preparation and planning in the classroom setting.

The career education unit appears to be a good concrete manner in which to gain administrative cooperation and support. Community members were cooperative, so apparently they also increased interest and support for career education.

Based upon the above conclusions the following recommendations are appropriate:

1. Development of a unit should be included as a part of a career education workshop or class.
2. The individualized contract approach, when the workshop participant is involved in the planning, is agreeable to teachers.
3. Units should be developed with a flexible format, so that they can be easily adapted to student needs.
4. Administrators should be involved in the preparation and implementation of the unit.
5. Community members should be approached for assistance in developing resources as they are usually cooperative and helpful.

CAREER DEVELOPMENT EDUCATION WORKSHOP

August 18 - 22

North Central Technical Institute

Time Schedule: Monday 9:00 to 3:00 p.m.
(Thirty hours of participation are required, scheduling will be determined by the group)

First Day

Orientation

1. Getting acquainted activities
2. Film: "Cipher in the Snow"

Small Group Sessions

1. Discuss personal career development
2. Learning contracts - Workshop and individual goals for the week

Career Development Wisconsin Style

1. Wisconsin Model
2. Sixteen learning concepts for career development

Career Development - How it Relates to my World

1. Review materials
2. Review teaching aids

Second through fifth days

(The format will be flexible with optional activities offered and time allotted for writing career education activities)

Proposed Content	Activities
Infusing career development into the curriculum	Review of teaching learning strategies and resources
	Discuss "nuts and bolts" with practitioners (panel discussion) entire group
	Participants will demonstrate kits and resources to other members of the group
	Participants will bring in a fellow staff member to share and plan career education plans and activities.

Life/Work Planning	Participant's explore and share career planning experiences
	Discuss the "World of Work" in the 70's and 80's (Panel of community and agency members) (Entire group)
	Buscaglia video tapes
Media (View film on career or self development)	"Pack Your Own Chute"
	"The World of Work"
	"Future Shock"
	"Why Am I Afraid to Tell You Who I Am?"
NCTI Resources	ERIC - Library
	Instructional Media Lab
Career Education Resources Laboratory from UW-Stout	Materials from the Career Education Project at UW-Stout

The majority of workshop time will be devoted to individual project development. A potpouri of activities such as value clarification or decision-making activities will be available on an optional basis.

CAREER EDUCATION WORKSHOP

August 18-22

North Central Technical Institute
Wausau

Project Guidelines

What: Projects are designed to allow each member of our workshop to become involved in a useful, practical activity designed to meet individual goals related to career education.

How: Each participant will develop a learning contract with the workshop coordinators to consist of:

1. The rationale for the chosen activities
2. The goals for the individual
3. The results of the activities
4. Date when activities will be completed.

When: All projects will be due by August 29. Hopefully, most of us will be able to submit our projects by the end of the workshop.

Example of Projects:

1. Evaluate career education teaching materials related to teaching area.
2. Action plan to promote self-concept exploration or career exploration or career decision-making.
3. Identification of school resources to promote career education
4. Identification of community resources to promote career education

One copy of you project will be retained by the instructor.

RESEARCH AND DEVELOPMENT

October 31, 1975

Dear

As a part of a follow-up project, Pat Wagner from UW-Stout, who conducted our summer career education workshop, has asked me to obtain information concerning your use of the career education units which you prepared during the session. Enclosed is a questionnaire which we would like to have completed. Any random comments which you have would also be helpful.

It was certainly a pleasure working with you this summer. We hope that the workshop has proven beneficial to your teaching and that you are having a pleasant year. Your cooperation in returning the questionnaire by November 14 will be appreciated. Please call the career education office, telephone 675-3331, Ext. #210, if we can be of assistance to you.

Sincerely,

Lois F. Gilliland

Lois F. Gilliland
Associate Project Director

CAREER EDUCATION WORKSHOP QUESTIONNAIRE

Name________________________________School________________________

Position____________________________Career Ed. Unit________________

Please check the appropriate answer:

1. Have you used your career education unit which you completed in the summer workshop at NCTI? Yes_____ No _____
2. Do you feel that it enhanced your teaching? Yes_____ No _____
3. Were the students positively responsive to the activities? Yes_____ No _____
4. Have you made additions to the unit? Yes_____ No _____
5. Did the activities prove to be relevant to the student's needs? Yes_____ No _____
6. Do you feel the unit would be helpful to other teachers in your field? Yes_____ No _____
7. Were community agencies cooperative in helping you? Yes_____ No _____

Please state your reaction to the following:

With whom did you use your unit?

What are the strengths of your project?

In what ways can the project be improved?

What were student and/or other reactions to the activities?

What are any additions or changes that you have made in the unit?

How would you use the unit differently in the future?

If community agencies were involved, how did they help with the unit?

What problems or cooperation did you have from other school personnel (administrators or teachers) in the implementation of the project?

Additional comments (Anything you feel might be helpful to use in evaluating the practicality of the career education project in the actual teaching situation)

TABLE I

RESPONSES TO THE CAREER EDUCATION WORKSHOP QUESTIONNAIRE

QUESTION	Number of Responses		
	Yes	No	Undecided
1. Have you used your career education unit which you completed in the summer workshop at NCTI?	10	4	0
2. Do you feel that it enhanced your teaching?	10	0	0
3. Were the students positively responsive to the activities?	10	0	0
4. Have you made additions to the unit?	5	6*	0
5. Did the activities prove to be relevant to the student's needs?	10	0	0
6. Do you feel the unit would be helpful to other teachers in your field?	9*	0	2
7. Were community agencies cooperative in helping you?	5	4	1

* Generally there were ten responses to each item as marked by teachers who had used their unit. However, one instructor marked appropriate items even though he had not implemented his project.

Statement on Community Participation and Project Progress:

We have contacted all major businesses and industries in the area, asking them for slides, pictures and literature about their employees and operations. In one day, we get entire slide presentations with write-ups from Drott, Wausau Homes, the Fire Department and Wausau Hospitals. The sheriff took pictures and is having a presentation developed for us, the Electric Company is sending us a presentation we can copy (the television station will do this for us), and the Armed Services are sending us Career Education programs worth over $100.00 (free of charge of course). Along with all of this, the State College of Beauty Culture is sending us packets and booklets as are most of the other smaller businesses we contacted. Employers Insurance invited us over to pick out the slides we would like to have; and the local newspaper is duplicating their slide presentation for us.

All in all, we have found people to be cooperative and generous. The only area in which we have had trouble is with some of the County-State offices (the material is all at the Madison headquarters), and the larger retail stores, whose material is also kept at their head offices.

We're still rolling, but this might give you some ideas you could use about resources available in any area.

By the way, 90% of these people offered to come out and give talks with their presentations.

Sandi Katzke & Sue Knippel

RESPONSES TO THE "EVALUATION
OF
"MEDFORD AREA RESOURCES GUIDE"

By Lois Gilliland, Associate
Project Director

The following responses indicate where teachers felt that they presently were in their teaching role with regard to career education.

1) Up until the present time how would you evaluate your knowledge of career education?

Highly satisfactory	9	8	7	6	5	4	3	2	1	Unsatisfactory
Number of Responses		2	4	1	4	2	1		1	

2) How would you evaluate your implementation of career education?

Inadequate	1	2	3	4	5	6	7	8	9	Highly satisfactory
Number of Responses	2		2	2	1	1	6	1		

a3) Up until the present time, how would you evaluate your knowledge of the businesses (employers) in the Medford area?

Very limited	1	2	3	4	5	6	7	8	9	Very good
Number of Responses	1	1	1	3	5	4	1			

4) How would you evaluate your use of Community Services/Resources up until the present time?

Excellent	9	8	7	6	5	4	3	2	1	Very Poor
Number of Responses		1	2	1	1	3	5		2	

The following responses indicate opinions of the resource guide:

5) Please check any and all items below that apply concerning your impressions of the "Medford Area Resources Guide."

Number of Responses	Response Item
12	Useful
11	Easy to use
4	Complete
2	Incomplete
0	Difficult to use
11	Practical for your uses
14	Related to career education
0	Does not relate

PRE-TEST AND POST-TEST RESULTS
FROM
CAREER EDUCATION OPINIONNAIRES

By Lois Gilliland,
Associate Project Director

The Career Education Opinionnaire was administered as a pre-test and post-test to fifteen participants at the Curriculum and Methods for Career Education workshop held from August 18-22, 1975. Although this is not a tested, statistically sound instrument, it was felt that changes of attitude or knowledge acquired during the meetings might be detected. This report shows a short analysis of the questions in which there was a noticeable difference between pre-test and post-test results. The number of responses in both the pre-test and post-test and the number of response changes can be seen in Table I. A copy of the instrument is found at the end of this report.

The post-test indicated that the eleven participants who were not acquainted with the Wisconsin's K-12 Guide for Integrating Career Development Into Local Curriculum had become familiar with the guide during the workshop. The pre-test showed that eleven people were not aware of the Wisconsin Model for Career Development. After the workshop only two people did not know about the model.

Before the workshop seven people indicated that they were not preparing local resource materials for career education. At the end of the session all participants were preparing local resource materials.

Questions on attitudes toward career education were very positive on both the pre and post tests. There was very little change in responses.

TABLE I

RESULTS OF CAREER EDUCATION OPINIONNAIRE

PRE-TEST AND POST-TEST

Section I - WHERE ARE WE NOW

Question Number	Pre Test Responses		Post Test Responses		Number of Response Changes
	Yes	No	Yes	No	
1	15	0	14	1	1
2	4	11	15	0	11
3	4	11	12	2	8
4	9	6	10	5	1
5	8	7	15	0	7
6	8	7	13	2	5
7	15	0	15	0	0
8	14	1	15	0	1
9	15	0	15	0	0
10	14	1	15	0	1
11	13	2	15	0	2
12	5	10	12	3	7

Section II - WHERE DO WE WANT TO GO? I BELIEVE I SHOULD.....

Question Number	Pre Test Responses		Post Test Responses		Number of Response Changes
	Yes	No	Yes	No	
1	15	0	15	0	0
2	15	0	15	0	0
3	15	0	15	0	0
4	15	0	15	0	0
5	15	0	15	0	0
6	15	0	15	0	0
7	15	0	15	0	0

Continued on next page

Section II - WHERE DO WE WANT TO GO? I BELIEVE I SHOULD... (Con't)

Question Number	Pre Test Responses		Post Test Responses		Number of Response Changes
	Yes	No	Yes	No	
8	15	0	15	0	0
9	15	0	15	0	0
10	15	0	15	0	0
11	15	0	15	0	0
12	15	0	15	0	0
13	15	0	15	0	0
14	14	1	14	1	0

Section III - HOW DO WE GET THERE

Question Number	Pre Test Responses		Post Test Responses		Number of Response Changes
	Yes	No	Yes	No	
1	12	3	9	6	3
2	13	2	14	1	1
3	15	0	13	2	2
4	15	0	13	2	2
5	14	1	10	5	4
6	13	2	14	1	1
7	15	0	12	3	3
8	15	0	12	3	3
9	15	0	8	7	7

Results on the last section on "How Do We Get There" implied that some participants had acquired information or understanding which eleminated some of their previous developmental needs. It was interesting to note that before the workshop all persons indicated a need to redefine their philosophy of education to include career education. After the workshop, only eight participants indicated this need.

Considering the responses on the instruments three conclusions can be drawn about the impact of the workshop. Teachers did acquire more information about the career education resources. Most participants did progress in their educational development with relation to career education. Teachers participating in the workshop had a positive attitude which they maintained throughout the workshop.

II. To help us establish where we are in career education, where we want to go, and what we need to do to get there, we need your reactions to the following statements. If you agree, please circle YES after the statement. If you disagree, circle NO after the statement.

WHERE ARE WE NOW?

1. I agree with the following definition of career education- Career Education is a decision-making process whereby the individual understands himself, the world of work, and career planning in preparation for a rewarding life.............. YES NO

2. I am familiar with the sixteen basic career development concepts in Wisconsin's K-12 Guide for Integrating Career Development Into Local Curriculum................................ YES No

3. I am familiar with the Wisconsin Model for Career Development.... YES NO

4. I am familiar with the career education resource materials in my building or in our library system.......................... YES NO

5. I am preparing my own local resource materials for career education.. YES NO

6. I am using community resources for career education.............. YES NO

7. Career education is for all students, including those with special needs and those who could go on to further education beyond high school... YES NO

8. Career education can be a strong motivational approach to learning.................... YES NO

9. Career education can make both learning and teaching more relevant and meaningful.................... YES NO

10. Career education should be provided at all ages, beginning in early childhood.................... YES NO

11. I am integrating career education into my curriculum.............. YES NO

12. I have taken at least one course that relates to the rationale, theories and foundations of career education.......... YES NO

WHERE DO WE WANT TO GO?

I believe I should. . . .

1. Help students develop an understanding of themselves and others.................... YES NO

2. Help students develop positive attitudes toward themselves, school, and work.................... YES NO

3. Help students relate what they learn to occupations.............. YES NO

4. Help students learn to appreciate the personal, social, and economic significance of work.................... YES NO

5. Help students develop an appreciation for the importance of all types and levels of work.................... YES NO

6. Help students assess their interests, aptitudes, personal traits, personal needs, and personal values, [illegible] an aid to career planning.................... YES NO

7. Help students become aware of the many occupational options open to them.................... YES NO

8. Help students consider how their career choice may affect the kind of life they will lead.................... YES NO

I believe we should. . . .

9. Provide opportunities for students to test their interests and aptitudes through paid or unpaid, actual or simulated work experience.................... YES NO

10. Help students develop skills in career planning.................. YES NO

11. Help students become aware of employment trends, and employer expectations.................... YES NO

12. Prepare all youth for either immediate employment or continuing education.................... YES NO

13. Help students learn how to get, hold, and advance on a job..... YES NO

14. Provide placement services for students upon exit from high school.. YES NO

HOW DO WE GET THERE?

To implement career education. . . .

1. I need to become familiar with the occupations that require knowledge of my subject(s).......................... YES NO
2. I need more exposure to occupations in local business, government, and industry.................................. YES NO
3. I need to know what other district teachers are doing in career education at my grade level or in my discipline..... YES NO
4. I need to develop career education learning activities .... YES NO
5. I need concrete examples of how I can integrate career education into my curriculum.................................. YES NO
6. I need to learn to develop better exploratory work experiences... YES NO
7. I need to learn techniques for developing local resource materials for career education.............................. YES NO
8. I need techniques for helping students develop career decision-making skills..................................... YES NO
9. I need to redefine my philosophy of education to include career education or any other societal crisis................. YES NO

PLEASE LIST ADDITIONAL NEEDS, SUGGESTIONS, AND COMMENTS.

DESCRIPTOR: *HANDICRAFTS; *INDUSTRIAL ARTS; *MARKETING; PROGRAM DESIGN; PROGRAM COSTS; TECHNICAL ASSISTANCE; *DEVELOPING NATIONS; *ECONOMIC DEVELOPMENT; INTERNATIONAL ORGANIZATIONS

IDENTIFIER: *FIJI

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 28P.

ABSTRACT: AT THE REQUEST OF THE GOVERNMENT OF FIJI, THE REGIONAL OFFICE FOR ASIA OF THE INTERNATIONAL LABOUR OFFICE PROVIDED TECHNICAL AND ADMINISTRATIVE DIRECTION TO FURTHER THE DEVELOPMENT OF THE HANDICRAFTS INDUSTRY IN FIJI. METHODS OF APPROACH WERE TO CONDUCT SURVEYS OF RAW MATERIALS, PRODUCTS, MARKETS, AND CONSUMERS; TO GIVE MARKETING PROGRAM ADVICE; TO ASSIST IN IMPROVING QUALITY, DESIGN, AND PRODUCTION; TO CONDUCT MANUFACTURING DEMONSTRATIONS; AND TO STUDY THE ORGANIZATION OF TRAINING FACILITIES IN HANDICRAFTS AND SMALL-SCALE INDUSTRY. AS A RESULT OF THE STUDY IT WAS RECOMMENDED THAT FOUR SECTORS COULD EXPAND: HANDMADE BRICKS AND TILES, HOME FURNISHING ACCESSORIES, NOVELTY AND SOUVENIR ITEMS, AND LUXURY GIFTS SUCH AS GOLD JEWELRY AND ART PRODUCTS. HOWEVER, AS PRIVATE ENTERPRISE APPEARED UNWILLING TO RISK CAPITAL, THE REPORT RECOMMENDED GOVERNMENT SUPPORT FOR THE ESTABLISHMENT OF A HANDICRAFTS DESIGN-PRODUCT CENTER AND MARKETING BRANCH, WITH TECHNICAL ASSISTANCE FROM PEACE CORPS VOLUNTEERS PLUS INTERNATIONAL EXPERTS AND EQUIPMENT. APPENDIX I DESCRIBES A PROPOSAL FOR A MOBILE BRICK FACTORY PROJECT, FROM DIGGING THE CLAY TO A COMPLETE COST SUMMARY. APPENDIX II CONTAINS A PROJECT OUTLINE FOR HANDICRAFT DEVELOPMENT, INCLUDING FINANCIAL DETAILS AND TENTATIVE JOB DESCRIPTIONS FOR HANDICRAFTS MARKETING. THE PROPOSED PROGRAM WOULD EMPHASIZE TRAINING IN PRODUCT DESIGN, EFFICIENT PRODUCTION, AND EFFECTIVE MARKETING. (MF)

ANNEXES

I. Proposal for a Mobile Brick Factory Project 11

II. Handicraft Development - Project Outline 18

INTRODUCTION

1. In 1963 a short report on Handicrafts in the British Crown Colony of Fiji was prepared by Mr. Angus McBean of the South Pacific Commission and in 1967 a brief survey of handicrafts in the Colony of Fiji was carried out by Mr. W.G. Schulz of the ILO/UNDPTA. Recommendations of the survey mission were communicated by the Director-General, ILO, Geneva, to the Colony of Fiji in "Mission Report: Fiji, Survey of Handicrafts, 16-21 October 1967".

2. In September 1968 the Crown Colony Government of Fiji sought the assistance of services of an internationally recruited expert under the United Nations Development Programme, which entrusted the execution of the project to the International Labour Organisation; the ILO appointed the expert in handicrafts development, Mr. W.G. Schulz. The expert started his assignment on 26 December 1969 and departed from Fiji on 29 February 1972, a brief transfer to Apia, Western Samoa, being fulfilled during this period (1 November 1970-28 February 1971).

3. The terms of reference of the expert were as follows for December 1969 to August 1970:

General

To assist the Government in conducting a thorough study of the situation with regard to manufacturing and marketing of Fijian handicrafts, especially in connection with foreign markets. Further, to render assistance in the examination of possibilities of concluding trade agreements with the West and South Pacific Islands with a view to the future establishment of a central handicrafts marketing facility for the entire area.

Specific

(a) To undertake initial surveys, with special reference to the existing handicrafts industry within the territory; to determine how it might be better organised and how greater productivity could be achieved;

(b) to advise on the improvement in quality, design and production of products in tapa cloth, bamboo, pottery and wood;

(c) to advise and assist in establishing a better marketing programme of handicrafts products made in the territory;

(d) to conduct demonstrations for the manufacture of handicrafts products;

(e) to train counterpart staff.

4. The terms of reference of the expert were as follows for 1 March 1971 to 29 February 1972:

General

Under the technical and administrative direction of the ILO Regional Office for Asia, the expert will assist the Government to further the development of the handicrafts industry sector, in particular through instituting appropriate marketing systems and establishing an adequate trade centre for handicraft products.

Specific

(a) To advise and assist co-ordination of production and marketing of handicraft products;

(b) to advise on improvements in design and quality of handicraft products catering for export, tourist and local markets;

(c) to advise in and promote the establishment of further handicrafts industries to satisfy market demands and increase work opportunities for the country;

(d) to advise, promote and participate in the establishment of a viable marketing centre for the collection, display, promotion, sales, export and improvement of handicraft products;

(e) to train national counterpart staff to enable the continuation of the handicrafts marketing development programme after the termination of this project of international technical assistance;

(f) to study in line with the objectives of Fiji's Sixth Development Plan (1971-1975) marketing and distribution of handicraft products produced by the West and South Pacific Islands.

5. During his assignment the expert was attached to the Ministry for Commerce, Industry and Co-operatives. This report is based on his work and his findings.

Acknowledgements

6. Grateful acknowledgement is made on behalf of the Director-General of the ILO for the courtesy shown and assistance given the expert by the ministry to which he was attached, by the district commissioners and their officers and by the numerous government officials and private individuals who were keen to assist in handicrafts development, particularly the Soqosoqo Vakamarama Handicrafts Centre, the Education Vocational Training Officer and his colleagues, the YWCA of Fiji and the many craftsmen and women who rendered their assistance in the execution of his duties.

PART I

TECHNICAL BACKGROUND

Conditions at the Start of the Mission

7. A study of conditions at the start of the mission revealed that little gain had been made toward the alleviation of main problems since the ILO Mission Report of 1967: Survey of Handicrafts. Such problems remained as:

(a) lack of organised marketing;

(b) lack of organised production and quality control;

(c) fluctuating price structure, with inadequate monetary return to artisans; and

(d) little or no designing or product planning and development to meet customer demand.

8. The number of foreign investors and buyers seriously interested in creating overseas markets for Fiji handicrafts had increased since 1967; however, private enterprise was still hesitant to invest because of the lack of general organisation in production of the varying quality of products, of the unreliable pricing structures and of existing methods of distribution.

9. There were, however, two notable exceptions to the above observations which should demonstrate to the Government that a successful and viable handicrafts programme is well within the realm of reality and can be worthy of investment:

(a) Soqosoqo Vakamarama Handicrafts Centre - a country-wide women's organisation, had succeeded through overwhelming odds in the attainment of its original goals as follows:

(i) to give fair price return for the work done;

(ii) to exercise quality control to raise producers' standards;

(iii) to instruct artisan members in market demand and production; and

(iv) to create ever-increasing employment for members, thus fulfilling its commitment as a charitable organisation and helping to improve the Fijian way of life.

(b) Handicrafts of Fiji Co-operative Limited - which received its starting support and guidance from the Ministry for Commerce, Industry and Co-operatives in August 1969, with the assistance of a Peace Corps volunteer, Mr. R.T. Stevens. Achievements of the Co-operative demonstrated the great benefits to be enjoyed through organising cottage industry to operate on a business-like basis. Sales rose from $154 in August 1969 to over $5,000 per month by the end of July 1970, with expanded growth forecast. Results achieved through organised production and sales included:

(i) wide selection of tapa cloth (masi), a popular tourist item for local retail sales outlets;

(ii) improvement in quality of a traditional art which had been on the verge of dying out;

(iii) increased earnings to artisans through finding new and higher price markets for them;

(iv) greatly increased employment for the outer islands.

In this connection, Mr. Kitione Waqa, who replaced Mr. Stevens as Director for the Handicrafts of Fiji Co-operatives Limited, was sent under the auspices of the UNDP on a fellowship in February 1972 to Bangkok, Geneva, other European cities and the USA to study marketing methods and to make sales contacts for the Co-operative's products.

Objectives of the Mission

10. In view of the existing situation in the handicrafts industry, objectives of the mission were considered principally to include the following:

(a) to carry out a thorough survey of the handicrafts situation through product, market and consumer surveys;

(b) to advise toward the establishment of a better marketing programme;

(c) to give assistance on improvement in quality, design and production;

(d) to conduct demonstrations for manufacture; and

(e) to study needs for development of better organised training facilities in the field of handicrafts and small-scale industry.

PART II

WORK OF THE MISSION

Methods of Approach

11. The activities of the expert covered the following areas:

- surveys and investigations;
- marketing advice; and
- product design, development and demonstrations.

Details have been given under those headings as follows:

Surveys and Investigations: Summary of Findings

12. Information and data covering the entire field of handicrafts production and development were sought on a continuing basis. Findings were turned over to the Ministry for Commerce, Industry and Co-operatives for use and information. A brief summary of findings is listed below:

(a) Raw Materials Survey

- Tropical woods suitable for carving were found on all islands in plenty. Early plantings of Hondouris mahogany were found to be suitable for carving and decorative woodwork.
- Sea shells and tropical seeds were varied and abundant. Pearl shell was plentiful and quantities were being exported as raw material.
- Clays for brick and floor tile were found on Viti Levu and Vanua Levu. These were tested and responded particularly well to the pressure press process.
- Pottery clays were located in most of the large river valleys of Viti Levu and Vanua Levu; all had good plasticity and matured at 1,000°C; all improved in workability, shrinkage and firing with the addition of Lagalaga white clay which was found to be plentiful in that area.
- Firewood for fuel presently being burned off as waste was found to be abundant in the neighbourhood of larger timber mills.
- A large variety of fibrous materials such as pandanus and palm leaf, hibiscus bark and paper mulberry bark was available on all Fiji islands and replanting was being carried out to keep pace with market demand.
- Local gold was mined in sufficient quantity and would meet the needs of a jewellery industry, should it be established.

(b) Product Survey

The product survey was compiled through on-the-spot observations of sales point displays at hotel and specialty shops, market stalls, street vendors, individual handicrafts producers' shops, small manufacturing centres and handicrafts sales outlets at Suva, Nadi, Lautoka and Sigatoka, and through interviews on production potentials with individual artisans and numerous island and village chiefs.

(i) Most of the items locally produced fell into the medium price range and accounted for a gross sale of $700,000 annually.

(ii) Imported items captured two-thirds of the market and took over the luxury and mass market product sales.

(iii) Luxury items, most imported jewellery, accounted for over 50 per cent of the gross sale of $2,100,000 in the gifts and decorative accessories field.

(iv) The quality of locally produced handicrafts was average.

(v) Prices of locally produced handicrafts were generally found to be non-competitive on world markets and even regional markets.

(vi) Production was centred on Viti Levu, especially near the Suva and Nadi-Lautoka areas, except for masi, which continued an ever-growing production at Vatulele, in the Lau Islands, and on parts of Vanua Levu.

(vii) Production methods in the field of ceramics needed much technical assistance.

(viii) There was a skilled and semi-skilled workforce of 3,000 to 5,000 women, mostly working part time, in the production of items made from natural fibrous materials, shells, seeds and pottery.

(ix) There was a skilled and semi-skilled workforce of 400 to 500 men producing items made from wood, pearl shell, and some gold and silver.

(c) Market Survey

The market survey was conducted through personal interviews rather than written questionnaires, as much of the information needed was confidential. Hotel specialty shop owners, handicrafts centres, market stall owners, street vendors, wholesale, retail and manufacturing outlets, as well as overseas investors, were consulted for this survey.

(i) Retail outlets for sales of locally produced gifts and decorative accessory items numbered 475 in Fiji, mostly concentrated in Suva, the Coral Coast of Viti Levu and the Nadi-Lautoka areas.

(ii) Ninety per cent of these outlets were directly connected with handicrafts manufacturing.

(iii) Wholesale and wholesale-retail outlets catering for export numbered six (6), with a gross volume of $76,635 in 1969.

(iv) Present markets for locally produced handicrafts indicated an almost equal share among wood products, fibrous products and shell and jewellery products, showing a slightly higher amount of sales of wood products.

(v) One-half of the items produced sold retail for $3 each, or under.

(vi) More than two-thirds of exports were wood products, of which about one-third consisted of wood carvings.

(vii) Sales of masi (tapa cloth) were growing rapidly in the export market and showed potential for outselling wood products.

(viii) The greatest potential market for locally produced handicrafts was a variety of items priced to sell at under $3 each, home furnishings and decorative accessary items, and luxury handicrafts.

(ix) The field in which there was the greatest potential market was ceramic and clay products.

(x) Export markets were in the United States, predominantly in Hawaii, and were followed in importance by Sydney and Melbourne.

(d) Consumer Survey

The consumer survey was carried out through personal interviews with hotel and specialty shop buyers and sales personnel, Suva City market stall owners, handicraft centres in Suva, Nadi-Lautoka and Nadi airport shop, with a random sampling of tourists and visiting handicrafts buyers, and with potential investors from overseas.

(i) Preference for certain items was noted according to age group and nationality (i.e. Americans preferred decorative, unique items; Australians (age 40 and up) purchased fine and luxury jewellery and (age 20-30) duty-free goods and then utility handicrafts; New Zealanders purchased the most novelty items). In general, the demands expressed by tourists were for:

- real bargains, no matter what the price. This factor was weighed against the purchaser's own buying power and what was available in his own country and those countries on his itinerary;
- items must have Fijian flavour or else originate from Oceana;
- high quality of skill, craftsmanship and design;
- quality marks and guarantees of authenticity for fine and luxury jewellery items;
- small and easily transportable handicrafts were desired by air travellers, who represent the largest percentage of visitors;
- attractive practical packaging, although not often available, was nevertheless required.

(ii) The export demand trends showed that Australia and New Zealand tended to import practical items such as beach baskets, handbags, market baskets, hats, etc. There were very large markets in the United States coastal resort areas where the stay-at-home consumer was usually quite young and required the exotic islands flavour in wearing apparel, accessories and decorative items. Particular demands stated by American and Australian importers were for:

- handicrafts to unique identity that would distinguish them from handicrafts of other countries;
- price advantage of some sort, either actual low price or else, if competitive with like items, design or finish qualities that would constitute a bargain for the consumer;
- a hand-made look with high quality finish;
- an expensive look through quality of workmanship;
- explanatory background tags which may increase product cost;
- attractive packaging in some cases.

Marketing Advice

Assistance in the Establishment of a Better Marketing Programme

13. Discussions were held with government officials concerning the product, marketing and consumer surveys carried out.

14. Proposals were submitted to the Ministry of Commerce, Industry and Co-operatives, at an early date of the mission, for action in establishing a handicrafts central distribution organisation for local and overseas markets.

15. The Marketing Branch for Commerce, Industry and Co-operatives drew up proposals for a government-sponsored National Marketing Authority to be established by an ordinance which would enable it to carry out advisory, regulatory and executive functions. The Act was passed on 18 March 1971.[1]

16. Most of the Marketing Authority's efforts were devoted to the marketing of agricultural products; however, its activities could also include the marketing of other Fijian products, such as handicrafts. It was envisaged that this

---

[1] Act No. 3 of 1971. To provide for the establishment of the National Marketing Authority to facilitate and develop internal and export markets for the products of Fiji.

organisation could provide facilities for warehousing, grading, storage, central retailing and wholesaling and management training for such producers as the Soqosoqo Vakamarama Handicrafts Centre, the Handicrafts of Fiji Co-operative Limited, the Fulaga and Jafau Woodcarvers and many others.

17. Advice and assistance was given to many private enterprises and organisations interested in overseas marketing, and distribution of lists of over one hundred handicrafts specialty shops and distributors was made, including those in Australia, North America and Europe.

18. Discussions concerning marketing and the role of the National Marketing Authority were held with numerous artisans, private enterprises and organisations, and government officials. The resulting consensus of opinion was: (a) that such an organisation would be competitive in generating sales; (b) the scope and responsibility of the Authority should be to buy and sell; and (c) that the Authority should only partake in informational and promotional activities. In view of these varied opinions, the expert submitted to the Government organisational changes for the improvement of the situation.

Product Design, Development and Demonstrations

19. Field work to accomplish product improvement and new product development was carried out in or near the cities of Suva, Ba, Lautoka, Labasa and Nadi, as well as in the Sigatoka, Ba, Rewa, Waimanu and Lagalaga River areas and on Taveuni Island, the Yawawa and Lau Islands groups.

20. Advice and assistance on production and marketing were given to the Handicrafts of Fiji Co-operatives Limited and the Soqosoqo Vakamarama in Suva, the Jafau Wood Carvers'Co-operative, Fulaga Woodcarving Company, and many small-scale firms in Suva and Nadi.

21. Demonstrations and training in kiln construction and firing, as well as the introduction of other new methods for work in ceramics, including glazing, was given to 42 potters and a number of beginners from 7 villages in Viti Levu and Vanua and in the Suva area.

22. Prototype designs for dr[illegible]g mugs, ashtrays, dolls, spice and condiment jars were made, fired and glazed but time did not allow for test marketing.

23. New methods of ceramic fabrication, in the form of pour moulds using Lalalaga River clay, were introduced to a number of artisans and organisations in Labasa and Suva.

24. Collaboration with the Soqosoqo Vakamarama on producing a national school basket was started, but time did not allow for completion.

25. Feasibility studies for a mobile brick factory were completed and turned over to the Government (see Annex I).

Suggested Organisational Changes

26. A draft for a project to establish a Handicrafts Production and Marketing Centre was suggested under the title Handicrafts Marketing Proposals to (a) the National Marketing Authority; (b) the Prime Minister's Work Party on Unemployment Problems in Fiji; and (c) the Committee on the Establishment of a Fijian Institute. The Government had not acted on these proposals at the time of the expert's departure.

PART III

CONCLUSIONS AND RECOMMENDATIONS

Conclusions

27. Four Fijian handicrafts and small-scale industries sectors could expand:

(a) building trades (handmade bricks, floor tiles, and decorative wall tiles);

(b) home furnishings (lamp bases and shades, floor coverings, wall hangings, cane furniture, etc.);

(c) novelty, souvenir gifts and decorative accessories (games, toys, dolls, ceramic mugs, ashtrays, wall plaques);

(d) luxury gifts (gold jewellery, works or art, etc.).

28. However, the following factors constrain the development of these sectors:

(a) insufficient financing and unwillingness on the part of private enterprise to invest in risk venture;

(b) lack of technical knowledge in design, production, and accounting procedures which would reduce to a minimum investment risks;

(c) unwillingness to invest the time, money and effort required for new product development, from the phase of actual concept to that of the making of prototypes, to test marketing, production set-up, and then to the marketing and selling of goods.

29. Therefore, unless the Government and/or some agency supports it, it is likely that any further development on the handicraft industry will be either too slow or will not take place at all. It is, therefore, recommended that the Government give favourable consideration to the establishment of a Handicrafts Design-Production Centre and of a Handicrafts Marketing Branch under the Fijian Institute and the Ministry for Commerce, Industry and Co-operatives. Initially, the Government could earmark $130,000(F) for two years' expenditure. Simultaneously, it could request assistance either through lateral or international aid giving sources in order to obtain the services of Peace Corps Volunteers and internationally recruited experts, equipment, fellowships and miscellaneous expenses, up to an estimated amount of US$300,000 for the first two years of a project. Annex II attached to the report contains the outline of a project for Handicraft Development (Phase I: 2 years) showing the required international technical assistance and probable government participation.

ANNEX I

(paragraph 25)

PROPOSAL FOR A MOBILE BRICK FACTORY PROJECT

A. Brick (9" x 4.5" x 2.5") requirement 450,000 per year

B. Floor tile (4" x 4" x 3/8") requirement 300,000 per year

Production capacity would be about 5,000 brick per day or 1,250,000 per year. Present markets indicate the need for 450,000 brick plus 300,000 floor tile per year. Plant operation would therefore be running at slightly less than one half capacity for the first year operation.

Costing figures given below have been tied to production for present markets. Cost for full production has been included for comparison in the attachment.

A. FACE BRICK

RAW MATERIAL

- Digging and Hauling Clay

One-quarter cubic yard of clay can be dug and hauled by wheel barrow (average 30 yards distance) in one hour. Average amount of clay needed is based on 3 long ton per 1,000 brick.

Suggested capacity: 2,100 brick per day or 6 cubic yards of raw clay at 1/4 cubic yard per hour = 24 man hours at $0.30 per hour = $7.20 per day for 215 days.

Cost per year production $1,548.00

- Drying Clay

Six cubic yards of clay per day at average drying time of 10 days. Clay to be spread out to 2-3 inch thickness and turned over with a scoop shovel by hand. One man can turn over 1/2 cubic yard of loose clay per hour.

Six cubic yards at 1/2 cubic yard per hour = 12 man hours at $0.30 = $3.60 per day for 215 days.

Cost per year production $774.00

- Grinding Dried Clay

Requirement 12 cubic yard per 5,000 brick. Grinding will be accomplished by a diesel powered grain huller (Bon-Accord Machine No. 1 or equal). Motor requirement is 11.5 to 14 horsepower. Output of this machine will be about 1 1/2 cubic yards dried clay per hour.

Operating the machine at one half capacity will produce the required 6 cubic yard per day needed. Eight hours at $0.42 per hour = $3.36 per day for 215 days = $722.40

Note: Unskilled labour needed to move clay to and from the grinding machine is calculated at 1/4 per man hour. Six cubic yards would require 24 man hours at $0.30 per hour or $7.20 per day for 215 days = $1,548.00

Cost per year production $2,270.40

- Mixing and Granulating Clay

Powdered clay is prepared by adding 7-12 per cent water in a hand tumbler or with a hoe. Production is calculated at a rate of 1/4 cubic yard of clay per hour or 24 man hours per 6 cubic yards at $0.30 per hour = $7.20 per day for 215 days.

Cost per year production $1,548.00

FABRICATION

Both brick and floor tile will be made by hydraulic pressmould process. Average output for brick would be 5,000 per day using 2 moulds at a time. To pace the machine at present market sales requirement, the machine should operate at slightly less than 1/2 capacity, or 2,100 brick per day.

One press operator at $0.60 per hour = $4.80 per day for 215 days = $1,032.

Two unskilled labourers to prepare moulds at $0.30 per hour = $4.80 per day 215 days = $1,032.00

Cost per year production $2,064.00

STACKING BRICK FOR AIR DRYING

Brick are carried on a hod averaging 8 to 10 brick per trip for no more than 20 yards. Capacity of 1/2 cubic yard (or about 230 brick) per hour required. Two men could transport and stack 2,100 brick per day. 16 man hours at $0.30 per hour = $4.80 per day for 215 days.

Cost per year production $1,032.00

B. FLOOR TILE (4" x 4" x 3/8")

The market for 1970 was estimated at between $15,000, and $20,000 per year with average cost about $0.06 per tile or about 300,000 floor tile per year. In consideration of the new building construction not only at Deuba but in other urban developments, a conservative estimate of 300,000 floor tile selling at 3.5 cents each would find ready markets.

There are 7,776 floor tile per cubic yard (4" x 4" x 3/8"). Average output is for 1 1/2 cubic yards or 11,664 tile per day. Cost estimates have been based on production of 10,000 tiles per day using 1 1/2 cubic yards of material.

RAW MATERIAL

- Digging and Hauling Clay

1/4 cu. yard per hour. Required 1.5 cubic yard = 6 man hours at $0.30 per hour = $1.80 per day for 30 days (300,000 tile).

Cost per six-week production $54.00

- Drying Clay

Required 1.5 cubic yard at 1/2 cubic yard per hour = 3 man hours at $0.30 = $0.90 per day for 30 days.

Cost per six-week production $27.00

- Grinding Clay

The requirement of 1.5 cubic yard per day can be ground in one hour at $0.30 per hour = $0.42 per day for 30 days = $12.60.

Unskilled lat [illegible] at $0.30 per hour = $2.40 for 30 days = $72.00

Cost per six-week production $84.60

- Mixing and Granulating Clay

1.5 cubic yards at 1/4 cubic yard per hour = 6 hours at $0.30 per hour = $1.80 per day for 30 days.

Cost per six-week production	$54.00

FABRICATION

10,000 floor tile per day produced in gang moulds of 4 tile each at $0.60 per man hour for press operator = $4.80 per day for 30 days = $144.00

One unskilled labourer to prepare moulds at $0.30 per hour = $2.40 per day for 30 days = $72.00.

Cost per six-week production	$216.00

STACKING FLOOR TILE FOR AIR DRYING

Moving tile to drying shed at 1 1/2 cubic yard per 8 man hours at $0.30 per hour = $72.00.

Stacking tile for drying at rate of 5,000 tile per 8 man hours. 300,000 tile require 480 man hours at $0.30 per hour = $144.00

Cost per six-week production	$216.00

FIRING

Tile and brick will be fired in the same clamp. Estimated space requirement for 300,000 floor tile would be equal to one 45,000 brick clamp.

Total of 450,000 brick	=	10 clamps
Total of 300,000 tile	=	1 clamp
Total clamps		11 per year

- Stacking Clamp

Brick Rate at 1/2 cubic yard (230 brick) per man hour. 45,000 brick require 196 man hours at $0.30 = $58.80 per clamp.

Cost per year production (10 clamps)	$588.00

Floor Tile Rate at 5,000 tile per 8 man hours, 300,000 tile require 480 man hours at $0.30 per hour ($144.00).

Cost per year production-for stacking	$732.00

- Building Clamp Skin

A clamp to hold 45,000 brick equivalent requires 5,000 expendable brick (at wall thickness of 4.5"). Brick would be laid dry and plastered over with mud. Clamp skin of 5,000 brick measures approximately 30 ft. long x 15 ft. wide x 12 ft. high. 5,000 brick = approximately 11 cubic yard. One quarter yard of brick can be laid per hour. Therefore, the clamp skin can be constructed in 44 man hours plus 4 hours for patching = 48 man hours at $0.30 per hour = $14.40 man hours per clamp.

Cost per year production (11 clamps)	$158.40

- Firing Clamps

Firing must start slowly for preheating and watersmoking for about 24 hours. Actual firing will require approximately 48 hours, or a total firing time of 72 hours. This firing will require 4 men throughout the 72 hour period, or 288 man hours at $0.30 per hour = $86.40 per firing.

Cost per year production (11 firings)	$950.40

- Firewood

3 cord firewood per 4,000 brick at $6,00 per cord = $202.50 per firing.

Cost per year production (11 firings) $2,227.50

- Expendable Brick Skin

5,000 brick at $0.02 each = $100.00 per firing.

Cost per year production (11 firings) $1,100.00

- Removal of Clamps

5,000 brick per 16 man hours at $0.30 per hour = $4.80 per clamp.

Cost per year production (11 firings) $52.80

MANAGEMENT

- Cost per year production $6,000

DEPRECIATION

- Buildings

- Clay Drying Shed to accommodate 6 cubic yard of raw clay per day during a 10-day drying cycle. Estimated square footage needed for spreading out of clay (to approximately 3" thickness) plus turnover space would be approximately 1,000 sq. ft. at $0.30 per sq. ft. = $300.00.

Cost at 10 years $30.00

- Clay Storage Bin

15' x 15' x 3' = 180 sq. ft. bin constructed of cement block at $0.30 per sq. ft. = $54.00.

Cost at 10 years $5.40

- Clay Storage and Processing Shed

Open-sided galvanised rood shed to cover clay storage bin, clay-grinding machine, hydraulic press equipment, and working area to be approximately 30' x 60' = 1,800 sq. ft. at $0.30 per sq. ft. = $540.00.

Cost at 10 years $54.00

- Brick Drying Shed

1,000 sq. ft. at $0.30 per sq. ft. = $300.00.

Cost at 10 years $30.00

- Office

At $750.00.

Cost at 10 years $75.00

- Equipment

1 each Bon-Accord rice huller (No. 1) at $469.00
1 each 11.5-14 horsepower diesel motor at $640.00
Plus accessories and installation costs at $50.00 = $1,159.00.

Cost at 10 years $115.90

	$
1 each hydraulic pump	850.00
1 each hydraulic accumulator	1 540.00
1 each hydraulic press	960.00
1 each diesel motor	400.00
6 each steel brick moulds at $60.00	360.00
6 each steel floor tile moulds at $60.00	360.00
Miscellaneous and installation	530.00
	5 000.00

Cost at 10 years $500.00

- Hand-tools

	$
8 each wheelbarrows at $25.00	200.00
10 assorted shovel and spades at $5.00	50.00
4 each axes at $5.00	20.00
	270.00

Cost at 5 years $54.00

INVESTMENT COSTS

Start up costs are based on 2,100 brick output per day of 22 working days plus 10 drying days, or 32 working days plus firing costs for 45,000 brick.

- LABOUR

				$
Digging clay at	$7.20	per day	x 32 days	230.40
Drying clay	3.60	"	"	115.20

Gross sales	33 000.00
Less costs	26 641.00
Net profit	6 369.00

ANNEX II

(paragraph 29)

HANDICRAFT DEVELOPMENT - PROJECT OUTLINE

Evidence has been given that handicrafts and small-scale industries can prove to be effective money earners for Fiji, and that village and island groups especially would benefit from further development. The programme as proposed to the Government ("Handicrafts Marketing Proposals") in December 1971 would place emphasis on training in new product design to meet customer demand, efficient production and effective marketing.

The proposed design-production centre which could preferably be set up in a village environment. The centre would start on a pilot basis and promote one sector of handicrafts at a time. In this connection, a project on doll manufacturing has demonstrated excellent possibilities; and studies on production of handmade brick and floor tile have been completed, which promise good success if implemented.

Feasibility studies should be made on each proposed new product, after which designs and prototype models would be test marketed and produced in accordance with customer demand. When the product has become established on the market, manufacture could then be turned over to selected village or island groups, under extension training for production. Marketing and distribution could be carried out through the National Marketing Authority, and thus the various production centres could pay for themselves as they grow.

The project would require initial assistance from the Government. This would include a yearly estimated expenditure of $45,000 the first year and $85,000 the second. Complete return would be expected by the end of the second year.

The participation of outside technical assistance would amount to $130,000 the first year and $170,000 the second. This rather high estimate would include designing and developing of new products as well as expert advice, training, and assistance in the establishment of various production centres.

FINANCIAL DETAILS

PHASE I

(1st Year) INTERNATIONAL INPUT

Experts*

		m/m	US$
-	Project Manager	12	30 000
-	Expert in handicrafts design and styling	12	30 000
-	Craft specialists:		
-	Pottery and handmade brick (12 mm) (Unspecified) (6 mm)	18	45 000
-	Expert services 1st year	42	105 000
-	Equipment for workshop and transport		15 000
-	Working capital for raw materials and experimental new product development		10 000
			130 000

GOVERNMENT CONTRIBUTION

1st Year

The Government's contribution will be represented by personnel premises, vehicles, equipment and operating expenses, allocated from the National Marketing Authority Fund.

ESTIMATED CAPITAL REQUIREMENT FOR 1ST YEAR'S OPERATION

		US$
-	Buildings, tools and equipment, office space and equipment, display salesroom including display units counters, etc.	5 000.00
-	Manufacturing costs including labour and management, raw materials and other expendable items	30 000.00
-	Marketing and sales including market research, distribution, advertisement and promotion, as well as stock items	10 000.00
	Estimated total capital requirement 1st year	45 000.00

ESTIMATED GROSS SALES FOR 1ST YEAR'S OPERATION

-	Clay products, brick, pottery and other items glazed or unglazed	20 000.00
-	Novelty and gift items made from various raw materials or combinations	15 000.00
-	Games, kits, toys, dolls, jewellery; other decorative accessories	10 000.00
	Estimated total gross sales 1st year	45 000.00

PROFIT OR LOSS TO NATIONAL MARKETING AUTHORITY 1ST YEAR

-	Estimated gross sales	45 000.00
-	Estimated cost	45 000.00
	Estimated net profit	nil

(2nd Year) INTERNATIONAL INPUT

Experts*

		m/m	US$
-	Project Manager	12	30 000
-	Expert in handicrafts design and styling	12	30 000
-	Craft specialists (unspecified) (2)	24	60 000
-	Marketing expert	12	30 000
		60	150 000

Total Expert Services 2nd Year	US$
- Equipment for workshop and transport	10 000
- Working capital for raw materials and experimental new product development	10 000
Total amount assistance 2nd year	170 000

GOVERNMENT CONTRIBUTION

2nd Year

As in first year of operation funding would be the responsibility of the National Marketing Authority.

ESTIMATED CAPITAL REQUIREMENT FOR 2ND YEAR'S OPERATION

- Building, etc.	5 000.00
- Manufacturing cost including continuation and expansion of proven items from previous year, plus development of new products as well as management costs	60 000.00
- Marketing	20 000.00
Estimated total capital requirement 2nd year	85 000.00

ESTIMATED GROSS SALES FOR 2ND YEAR'S OPERATION

- Clay products, brick, floor tile, roofing tile, decorative ceramic wall tile, mosaic tile, beer mugs, ash-trays, other accessory items and gifts	35 000.00
- Novelty, souvenir, gift items made from various raw materials for tourist and limited regional and overseas markets	25 000.00
- Home furnishings and decorative accessory items; lamp and lampshades, ratan furniture, floor coverings, wood carvings etc., local market	10 000.00
- Games, kits, toys, dolls, jewellery etc., tourist and regional export	20 000.00
Estimated total gross sales 2nd year	90 000.00

PROFIT OR LOSS TO NATIONAL MARKETING AUTHORITY 2ND YEAR

- Estimated gross sales	90 000.00
- Estimated cost	85 000.00
Estimated net profit	5 000.00

*HANDICRAFTS MARKETING PROJECT: FIJI
TENTATIVE JOB DESCRIPTION

POST: PROJECT MANAGER

DESCRIPTION OF DUTIES

Specific:

1. To advise in and promote the establishment of further handicrafts industries to satisfy market demands and to increase work opportunities for the country by establishing priorities on design, production and marketing activities based on market research, feasibility studies and cost-flow sheets for each product.

2. To advise, promote and participate in the establishment of a viable Design-Production-Marketing Centre, which is necessary to the growth of rural industry and the handicrafts sector.

3. To advise and guide individual members of the team and co-ordinate their work activities toward making the Centre self-generating in funding matters, and the ultimate establishment of new handicrafts and rural industries products.

4. To advise Government on any suggested change in policy and to serve as the channel of communication between government authorities and members of the team.

POST: DESIGNER FOR GIFTS AND DECORATIVE ACCESSORIES

DESCRIPTION OF DUTIES

Specific:

1. To advise and assist in design implementation for new products in the handicrafts and small-scale industries sector, with particular reference to customer demand for Fijian products and the use of local raw materials.

2. To advise and assist in implementation of improvements in design of presently-made handicrafts to cater to tourist, local and export markets according to customer preference.

3. To advise and assist in the designing of prototypes required for market testing, efficient production, and customer feedback reaction; articles to be produced under the auspices of the proposed Production-Marketing Centre.

4. Work closely with and help co-ordinate activities of all members of the team and associates.

5. Train counterpart staff.

Qualifications:

1. College degree or equivalent with background in fine and/or commercial art. Design emphasis in ceramics, plaited ware, wood carving and jewellery.

2. At least two to five years' practical design experience in the commercial world.

3. Current knowledge of world market demands and trends in the field of art, handicrafts, gifts and decorative accessories.

4. Knowledge and experience in designing for dress fashions and accessories and especially jewellery would be very helpful.

5. Ability to extend ideas to an understanding of South Pacific customs and art forms and to create fresh, new product ideas for Fiji.

6. Knowledge of English.

POST: BRICK AND TILE MANUFACTURE

Specific:

1. To advise and implement the use of the hydraulic press for brick and tile manufacture.

2. To advise and help implement the use of wood-firing clamps for production of quality products at minimum cost.

3. To advise on and oversee entire brick and floor tile production and to establish the pilot centre on an economical basis.

4. Supervise twenty to thirty untrained workers.

5. To train counterpart staff.

Qualifications:

1. Knowledge in the use of the hydraulic press for fabrication of brick and floor tile.

2. Knowledge and experience in the entire process of manufacturing brick and floor tiles and firing in wood clamps (45,000 bricks) on a village-type level.

3. Knowledge of Hindi and English.

HANDICRAFTS MARKETING PROJECT: FIJI
TENTATIVE JOB DESCRIPTION FOR
ASSOCIATE EXPERTS OR US PEACE CORPS VOLUNTEERS

A. Market Research and Analysis

General:

Under the technical and administrative directions of the Handicrafts Marketing Manager (the national counterpart to the Handicrafts Marketing Adviser), the associate expert will assist the Government of Fiji to further develop the handicrafts industries sector. In particular, to gather as much factual market information on local (tourist-visitor) Fiji markets so that decisions may be based on factual information and not guess work. The associate expert would also assist the Handicrafts Marketing Manager in analysis and interpretation of handicrafts market intelligence.

Specific:

1. To advise and assist in obtaining all possible data regarding the handicrafts market, local tourist-visitor as well as export.

2. To advise and assist in costing of various activities to assist in marketing strategy.

3. To advise on best price policy for each item produced, to cover Fijian home markets as well as export markets.

4. To evaluate and analyse marketing data to provide a continuous marketing intelligence for the handicrafts industry.

5. To train national counterpart staff.

6. To assist in the preparation of handicrafts marketing reports, information sheets, etc.

Qualifications:

Market Research and Analysis Specialist

1. Background in economics, accounting, statistics, analysis, general marketing and consumer surveys.
2. College graduate preferred. Need not have actual experience in market research and analysis but should be able to apply skills to practical marketing programme.
3. Ability to get along with people well and to train others in his speciality.

B. Advertising and Sales Promotion

General:

Under the technical and administrative direction of the Handicrafts Marketing Manager (national counterpart to the Handicrafts Marketing Adviser), the associate expert will assist the Government of Fiji to further develop the handicrafts industries sector. In particular through advertisement and sales promotion both in Fiji and on export markets.

Specific:

1. To advise and assist in advertising and sales promotion which will influence the customer and stimulate demand for any and all locally produced handicraft items.
2. To advise on establishing and maintaining a showroom of Fijian handicraft products.
3. To advise and assist in creating a working file on what handicraft items are available in Fiji, where, in what quantity and at what price.
4. To advise and assist in consultation with market research and analysis personnel, as well as others connected with the handicrafts marketing project, on marketing strategy.
5. To suggest all possible ideas which will help influence sales, such as packagings, item tags, etc.

Qualifications:

Advertising and Sales Promotion Specialist

1. Background in the field of marketing and/or advertising.
2. College graduate preferred. While practical experience in the field would be desirable, a person with imagination and enthusiasm for the job and who has technical training in the field could make a great contribution.
3. Ability to advise, train and to get along with others.
4. Must be adaptable to a unique situation, where organising sales for export markets may prove difficult and trying at times.
5. Ability to advise and assist in point-of-sale promotions for a variety of handicraft products is desirable.

C. Product Manager for Household Gifts and Decorative Accessories

D. Product Manager for Wearing Apparel and Accessories

E. Product Manager for Toys Dolls, Games and Leisure-Time Products

General:

Under the technical and administrative direction of the Handicrafts Marketing Manager (national counterpart to the Handicrafts Marketing Adviser), the associate experts will assist the Government of Fiji in the development of the handicrafts industries sector. In particular, the product managers will be concerned with activities in specific production in the field of handicrafts. They must ensure that products are well designed or otherwise adapted, packaged, advertised and distributed in accordance with requirements of the local and export markets.

Specific:

1. To advise and assist in the co-ordination and integration of production and marketing of handicrafts products by working closely with the marketing staff as well as the producers.

2. To advise and assist the producer in design, colour, size, quantity, quality, price, delivery times, etc., in order to enable him to best meet consumer demand.

3. To advise and assist in translation consumer reaction and feedback into product modification or creation of new products.

4. To advise and assist in product distribution matters, such as in packing, crating, filling of orders, etc., in order to make products available and easy to buy, both locally and on export markets.

Qualifications:

C. Product Manager: Specialist in Household Gifts and Decorative Accessories

1. Strong art and design background.

2. Specialised training in woodwork, wood carving, ceramics, applied or industrial design especially in connection with products for the home and interior decoration of all kinds.

3. Experience in actual production situation, such as work in a brick, ceramic, or furniture manufacturing operation is highly desirable.

4. Must have the ability to adapt design concepts to hand crafted items emphasising the unique flavour of the South Pacific and Fiji in particular.

5. The associate will be required to work in the field with various producers and co-ordinate all activities between producer, marketing manager and customers.

6. Ability to translate customer demand and feedback into practical production will be required.

Qualifications:

D. Product Manager: Wearing Apparel and Accessories Specialist

1. Background in fashion designing with some emphasis on hand crafted work is desirable.

2. Knowledge and experience in working with products made from straw, grass or other fibrous materials is also highly desirable.

3. Ability to utilise techniques and decorative motifs which have a Fijian flavour and to translate these into highly unique and saleable products for tourist visitors to Fiji as well as for export markets in Australia, North America and Europe.

4. Must be willing to work and travel in the country and to assist and organise producers, mostly women, in product modification and development of new products.

Qualifications:

E. Product Manager: Toys, Dolls, Games (Leisure Time) Products Specialist

1. Background in fine art, applied or industrial design, all handicrafts and packaging.

2. A highly imaginative person who can show ability to translate product ideas into production for sales, this field requires a creative individual with some practical experience as market research of both tourist-visitor and the export markets presently indicates.

3. The ability to utilise and combine such raw materials as pandanus and coconut fibres, pottery, seeds, shells, tapa, exotic woods, etc. to create new products with a Fijian flavour.

4. The associate may be required to sell his product ideas to self-help community situations and be willing to carry these ideas through stages from pilot models, consumer reaction, production, packaging, promotion, distribution and sales.

ACCESSION NUMBER: VT102906

PUBLICATION DATE: 75

TITLE: REPORT ON ILO/SIDA SEMINAR ON COMMERCIAL TRAINING FOR ENGLISH-SPEAKING AFRICAN COUNTRIES. (MOMBASA, KENYA, AUGUST 11-23, 1975).

DESCRIPTOR: *BUSINESS EDUCATION; *SEMINARS; *DEVELOPING NATIONS; *EDUCATIONAL DEVELOPMENT; TRAINING TECHNIQUES; ENGLISH (SECOND LANGUAGE)

IDENTIFIER: AFRICA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 32P.

ABSTRACT: THE OBJECTIVES OF THE SEMINAR WERE TO STUDY AND EVALUATE COMMERCIAL TRAINING PROGRAMS IN THE ENGLISH-SPEAKING AFRICAN REGION IN ORDER TO FORMULATE GUIDELINES FOR FURTHER DEVELOPMENT AND IMPROVEMENT. THE 27 PARTICIPANTS WERE COMMERCIAL TEACHERS AND ADMINISTRATORS FROM 16 ENGLISH-SPEAKING AFRICAN COUNTRIES AND THE EAST AFRICAN COMMUNITY. MOST OF THE 27 OBSERVERS WERE TEACHERS AND OTHERS INVOLVED IN COMMERCIAL EDUCATION IN KENYA. SEMINAR ACTIVITIES CONSISTED OF LECTURES, PRESENTATION OF WORKING PAPERS, PLENARY AND GROUP DISCUSSIONS, A PANEL DISCUSSION WITH UNION AND EMPLOYERS' REPRESENTATIVES, PRACTICAL DEMONSTRATIONS, VISITS, HANDOUTS, AN EXHIBITION, AND PARTICIPANT EVALUATION. DISCUSSION TOPICS INCLUDED TRAINING STANDARDS, TRAINING METHODS AND TECHNIQUES, TRAINING EQUIPMENT AND MATERIALS, THE ENGLISH LANGUAGE AS AN INTEGRAL PART OF COMMERCIAL TRAINING, SHORTHAND SYSTEMS, AUDIO-TYPEWRITING, AND UPGRADING AND SPECIALIZATION OF TEACHERS. OUTCOMES OF THE DISCUSSIONS WERE 25 RECOMMENDATIONS FOR IMPROVEMENT IN AREAS OF CONCERN. PARTICIPANT INTEREST WAS HIGH, AND THE SEMINAR FILLED A NEED FOR THE EXCHANGE OF VIEWS AND COLLABORATION IN FINDING SOLUTIONS TO MUTUAL PROBLEMS. APPENDIXES CONTAIN LEADERSHIP AND SECRETARIAT PERSONNEL, PROGRAM AGENDA, LISTS OF PARTICIPANTS AND OBSERVERS, GROUP DISCUSSION QUESTIONS AND GROUP MEMBERS, AND LISTS OF FILMS SHOWN AND HANDOUTS DISTRIBUTED. I. INTRODUCTION

1. Within the framework of its co-operation with the Swedish International Development Authority (SIDA), the International Labour Office (ILO) submitted in 1972 a project proposal for a Commercial Training Seminar for English-speaking African countries.

2. In 1973 SIDA agreed to finance the seminar and it was decided that:

(a) the seminar should take place in August 1975;

(b) the participants should be commercial teachers, heads of commercial schools or administrators of commercial training;

(c) the seminar should be held in one of the secretarial training colleges set up with the assistance of SIDA.

3. In September 1974, the Government of Kenya agreed to host the seminar and it was suggested that it be held at the Government Secretarial College in Mombasa. It is very interesting to note that from 1963 to 1967 the SIDA and the ILO were jointly involved in starting secretarial training and secretarial instructor training in Kenya.

4. The objectives of the seminar were to study and evaluate commercial training programmes in the English-speaking African region with a view to elaborating appropriate guidelines for future action. In the letter of invitation to the seminar, participants were asked to examine problems involved in preparing and conducting successful commercial training programmes to enable them to obtain new ideas and fresh views on commercial training in order to improve and develop appropriate programmes in their respective countries.

5. The Director-General of the International Labour Office wishes to express his sincere thanks and appreciation to the Governments of Sweden and Kenya for their generosity, co-operation and hospitality in making the seminar possible, and, in particular, he wishes to place on record recognition of the invaluable assistance given by the Directorate of Personnel Management through the Government Secretarial College in Mombasa as host of the seminar.

6. Thanks are also due to the Central Organisation of Trade Unions of Kenya, the Federation of Kenya Employers and the National Chamber of Commerce and Industry (Mombasa branch) for their participation in the seminar discussions and to the East African Harbours Corporation and the East African Posts and Telecommunications Corporation for the very interesting tours which were organised for the participants.

7. This report summarises the main facts, conclusions and recommendations of the seminar. It has intentionally been kept concise in the hope that all those who are interested in and concerned with the subject will read the report and, where necessary, take the actions required. The aim of this report is to pave the way for future development of commercial training activities in English-speaking African countries.

II. ORGANISATION AND ADMINISTRATION OF THE SEMINAR

A. Technical preparations

8. At the end of 1974, the ILO recruited Miss Josephine Shaw, ILO expert in commercial training in various African countries, to undertake the preparatory work for the seminar. From January to February 1975 Miss Shaw was attached to the Vocational Training and Guidance Branch of the ILO to prepare the basic working papers. An official invitation was prepared and sent to the governments concerned as well as to the East African Community. A provisional programme was set up; the final programme is attached as Annex 2.

9. The ILO nominated Miss Karin Schramm, responsible for the Commercial Training Programme with the Vocational Training and Guidance Branch at ILO headquarters in Geneva, as Director of the seminar and recruited the two consultants foreseen for the seminar: Mrs. Karin Bäcker, recommended by SIDA, as technical adviser for East Africa and Miss Josephine Shaw, ILO expert, as technical adviser for West Africa (see Annex 1).

10. In April 1975 Miss Schramm spent three days in Kenya to establish contacts, visit the Government Secretarial College in Mombasa and make necessary arrangements for the seminar.

B. Material arrangements

11. The seminar sessions were organised at the Government Secretarial College in Mombasa which comes under the Directorate of Personnel Management in the Office of the President. All available facilities and supporting services were at the disposal of the seminar: office space, a general lecture room for plenary sessions, discussion rooms for syndicate work, language laboratory, room for the exhibition, the dining hall for refreshments, the lounge for the official opening and closing ceremonies. As the students of the college were on holiday the staff of the college was made available to the seminar organisers.

12. Accommodation and meals were arranged for all participants at the Oceanic hotel, near the Government Secretarial College. Recreational facilities were available at the hotel and the College.

13. Transport was made available by the Government Secretarial College: two school buses and one minibus were at the disposal of the seminar to meet participants at the airport and to transport them between the College and the hotel.

C. Participants and observers

(i) Participants (see list in Annex 3)

14. The governments of 18 English-speaking African countries and the East African Community had been invited to send one or two participants to the seminar. They were to be commercial teachers, heads of commercial schools or administrators of commercial training.

15. The East African Community and 16 of the 18 countries invited nominated participants. The total number of participants was 27, ten of whom were commercial teachers, instructors or lecturers, eight were heads of commercial training departments or training institutions and nine were education officers or administrators of commercial training.

(ii) Observers (see list in Annex 4)

16. Observers had been invited from UNESCO, the World YWCA and the East African Examinations Council, the latter two sent one and two representatives respectively. Observers as distinct from official representatives (participants) were not financed by the seminar, but did receive seminar papers free of charge and participated in all the sessions, visits, etc.

17. At the request of the Government of Kenya, a number of commercial teachers and persons involved in commercial education in Kenya were admitted as observers. The total number of observers was 27 although some of them only came for part of the seminar.

18. SIDA was represented by Mrs. K. Bäcker, former SIDA expert at the Government Secretarial College in Mombasa, Mr. I. Nordstrom, SIDA commercial teacher at the same college and Mr. O. Englund, newly appointed commercial teacher at the Government Secretarial College in Nairobi. The two official representatives from the SIDA office in Nairobi were Mr. L. Andersson, head of section, during the first week, and Miss E. Nisseus, education officer, during the second week of the seminar.

III. PROGRAMME AND ACTIVITIES

A. Official opening and closing ceremonies

19. The seminar was officially opened on Monday, 11 August 1975 by the Hon. Oduya Oprong, MP, Assistant Minister for Labour. Speeches were given by Mr. L.S. Andersson on behalf of SIDA and by Mr. M.A.O. Ndisi, ILO Regional Director for Africa, on behalf of ILO. Addresses of welcome were given by His Worship the Mayor of the Mombasa Municipal Council and Mr. D. Akumu, Secretary General of the Organisation of African Trade Union Unity. The seminar was officially closed by Mr. J.A. Gethenji, Permanent Secretary and Director of Personnel Management. The conclusions and recommendations were presented by Miss K. Schramm, the ILO Director of the seminar and a vote of thanks given by Mrs. R.M. Domingo, Head of Commercial Section, Technical Institute, Freetown, Sierra Leone.

B. Approach to the seminar

20. The programme of the seminar is attached in Annex 2. It was decided that the approach to the seminar should allow for maximum participation and that the lesson/lecture method would be strictly limited. To allow for maximum subject coverage in the two weeks, it was decided that country papers should not be presented during the seminar. Participants learnt about the problems and situations in other countries through plenary and group discussions. The seminar can therefore be divided into:

(i) Lectures

21. The two technical advisers, Miss J. Shaw and Mrs. K. Bäcker, prepared lectures covering shorthand systems and training methods and techniques which included practical demonstrations and discussions. A third lecture on "self-instruction" was given by Mr. D.J. Pétry, Chief of the Research and Training Services Branch at the International Centre for Advanced Technical and Vocational Training in Turin/Italy. This lecture included the projection of a slide series on the "application of modules of employable skills to industrial vocational training" and on "the layout of a business letter". Use was made in these three lectures of training aids such as the flip chart, the overhead projector, film and slide projectors, role play and others.

(ii) Working papers

22. Five working papers had been prepared on the following subjects:

- training standards;
- training equipment and materials;
- English language as an integral part of commercial training;
- audio-typewriting;
- upgrading and specialisation.

The working papers were sent to the participants after receipt of their nominations and were distributed to the observers on arrival in Mombasa.

23. Leaders' notes and a discussion plan had been prepared and each subject was briefly introduced and followed by plenary and/or group discussions. Members of the directing staff shared chairmanship duties.

(iii) Plenary and group discussions

24. As this was the first seminar on commercial training ever held for English-speaking African teachers, heads of training institutions and administrators, who had been working more or less in isolation, maximum time was given to the exchange of views in plenary and group discussions (see group

9

discussion questions in Annex 5). For this purpose participants and observers were divided into four working groups, each group having its own chairman and rapporteur. The composition of the groups is shown in Annex 6. Participants from the same country sat in different working groups.

25. The conclusions and recommendations of each group were distributed to each participant and observer and a general discussion took place to elaborate draft recommendations.

(iv) Panel discussion with union and employers' representatives

26. The Central Organisation of Trade Unions of Kenya (COTU), the Kenya Federation of Employers and the National Chamber of Commerce and Industry, Mombasa branch, had accepted ILO's invitation to join the seminar on Thursday, 14 August for an exchange of views and discussions on various aspects of commercial training.[1] The purpose was to make all those in charge of commercial training aware of the requirements and expectations of the employers and to give the trainers a chance to inform the employers about their difficulties in training with a view to finding together ways and means of improving the output in the commercial training field in the African region.

27. It became apparent in the discussions that there is a certain lack of liaison between the trainers and the employers. The participants stated that they do not know what kind of training is wanted by the employers and that the product of their training, i.e. secretaries, clerks, copy-typists, is not used properly: bosses are not dictating and secretaries lose their shorthand and other secretarial skills. It was suggested that there is a great need for job specifications and analysis and more and closer collaboration.

28. Employers' representatives insisted on entrance requirements into training. The basic level of education seems to have dropped in general and it was mentioned that in future it might be necessary to have General Certificate of Education "A" level students in training for middle and higher levels of office workers.

29. Trade union representatives mentioned that there are many drop-outs who should be given the opportunity to be trained for a job and that there should be more induction and upgrading training undertaken by employers and more information made available so that they would be kept up to date.

(v) Practical demonstrations

30. A role play was organised as a practical demonstration and part of the lecture on training methods and techniques. Students of the Government Secretarial College performed the role play simulating the difference between a good and a bad secretary.

31. A demonstration of a modern typewriting technique was given and interested participants took part in exercises on the typewriter practising the so-called fixed-tabular stops.

32. Groups of participants attended practical demonstrations in the language laboratory and on various office machines including, the electronic stencil cutter, reproduction equipment, addressing and calculating machines.

(vi) Films

33. A list of the films shown during the various sessions of the seminar is attached in Annex 7. They covered mainly office techniques, secretarial duties up to the effective use of a secretary by her boss. Most of the films were followed by discussion and roused great interest among the participants.

---

[1] There were two representatives from each of the three organisations.

(vii) Visits

34. Two visits were organised as part of the programme, the first one to the East African Posts and Telecommunications Corporation (including sorting and parcels office, counter, telegraph room, telephone exchange and telex room) and the second one to the East African Harbours Corporation (including a briefing on the administrative structure and port operations, visits to the operation sites and central documentation office and a trip round the harbour). Both visits were of general and professional interest and gave rise to a great number of questions from the participants.

(viii) Exhibition

35. An exhibition was held in one of the classrooms of the college. A variety of machines available at the brand-new, SIDA-equipped college were displayed together with training posters, sample training packages, tapes, slide series, material for project work, catalogues and a great number of books on the various subjects taught in commercial training. There was also a shorthand exhibition with teaching and research material on various shorthand systems.

(ix) Handouts

36. A great number of handouts had been prepared either before or during the seminar and were distributed to the participants for future reference. A list of these handouts is attached in Annex 8.

(x) Evaluation

37. To enable those responsible for the the seminar to obtain some feed-back an evaluation form was distributed to the participants. The answers received were encouraging in so far as they stressed the interest taken by the participants in the seminar although participative methods were applied throughout, it appears that participants would have liked even more group work. Some of the participants suggested that preparatory work be done before the seminar, e.g. in the form of country papers which would of course raise other problems. Participants do not seem to have encountered any major problems and indicated their satisfaction.

IV. SUMMARY OF THE DISCUSSIONS

A. Training standards

38. Working paper No. 1 was the basis for both plenary and group discussions. It was agreed that the present standards of commercial training generally do not meet the requirements of employment. The two major factors contributing to inadequate standards are lack of trained teachers and lack of consultation between training institutions and employers. In addition it was felt that existing examinations are not always relevant to the job situation. If a syllabus geared to employment requirements could be established and a realistic duration period related to the likely level of trainees, decided upon, suitable trainees would then be selected.

39. It was stressed that suitable training should be made available depending on the academic attainment and aptitudes of trainees and taking into acccunt manpower needs.

40. The most important aspects of the contributory factors were the subjects of group discussion:

As a general comment it was pointed out that it would be difficult for teachers to improve themselves, produce materials to enhance their teaching, place more emphasis on practical training and consult employers unless the size of classes is limited and the teaching load lightened. The ideal size of class is 20 but 25 is manageable. A reasonable teaching load varies depending on the subject and, of course, the staff situation.

Working group 1:

41. The causes of inadequate standards were summarised as follows:

(a) insufficient number of properly trained teachers and trained teachers' lack of job experience;

(b) lack of incentive for desirable candidates to become commercial teachers;

(c) insufficient equipment due to inadequate finance;

(d) lack of liaison between trainers and employers;

(e) lack of upgrading and refresher training programmes for existing teachers;

(f) lack of interchange of ideas and information among teachers both locally and at international level;

(g) the examinations which at present qualify a commercial trainee for employment are too theoretical; there is no practical test to assess job performance.

Suggestions were formulated which would lead to an improvement in standards (see recommendations).

Working group 2:

42. Teacher training requirements for both new and existing teachers were set out. People with GCE "O" and "A" levels, degrees of professional qualifications should be selected for teacher training. The course would vary from one year for graduates and those with professional qualifications to three years for "O" level trainees with no commercial background. The necessity for job experience to be an integral part of the courses was stressed. Qualifications would be at various levels including Business Teachers' Certificate, Diploma and B.Ed. degree.

43. It was stressed that there is a great need for upgrading and refresher courses to be established for existing trained and untrained teachers. It is necessary to include both subject matter and teaching techniques. Participants from their own experience insisted on training in special aspects such as use of audio-visual aids (including the production of simple aids), and production and use of teaching aids generally.

12

Working group 3:

44. National training standards were discussed in relation to examinations and testing. The group stressed the need for consultation between the various people and bodies responsible for training, examining and employing commercial trainees. Training should be geared towards qualifications for jobs, e.g. typist, rather than subject examinations.

45. Training standards should be prepared by first establishing job requirements. Consultation with employers is essential. The type and level of qualification can then be decided. The test must be an assessment of the trainee's ability to do the job as required by employers. The entry qualifications (age, academic attainment, previous commercial education, aptitudes) can then be laid down and a training syllabus prepared indicating duration of course, course content and time allocation for each specific component of the course.

46. It was agreed that even when courses are made as practical as possible, training should include job experience to prepare the trainee for employment. Evaluation is necessary to ensure that such job experience is adequate and relevant. Questionnaires completed by both trainees and employers would be a means of evaluation.

Working group 4:

47. Aptitude testing and vocational guidance were considered to be essential processes in selecting entrants to commercial courses. It was agreed that vocational guidance should be provided for potential trainees before entering commercial courses, for specialisation during courses and on a continuing basis for remedial purposes. Aptitude tests should be given to all before a final choice is made of the training programme to be followed.

B. Training methods and techniques

48. A paper was presented by Mrs. K. Bäcker, Technical Adviser, explaining and demonstrating the teaching methods and techniques available to the commercial teachers. Plenary and group discussions followed the presentation.

Working group 1:

49. It was pointed out that job experience[1] is essential for commercial courses leading to employment and teachers must collaborate with employers to ensure that the objectives are achieved. Employers have to be informed of the level and ability of each trainee and asked to prepare a proper training programme. Trainees should report on the job experience stating:

(a) name of organisation and department worked in;

(b) duties undertaken;

(c) new equipment seen operated;

(d) problems encountered;

(e) any recommendations.

Employers should also be asked to report on the trainees.

50. The arrangement of job experience must depend on circumstances in each country. It could be on Saturday mornings, one day a week or in a block of say three or four weeks either during term or during vacation. The trainees should understand that job experience is a part of their training. They will be paid out-of-pocket expenses, but no salary.

---

[1] During the seminar the term "practical training" was used but as there was confusion between institutional training with a practical bias and working in an office the term "job experience" is preferred.

51. It was stressed that it is essential for teachers to be in contact with both trainees and employers during the job experience period to ensure that the trainee is fully and properly occupied.

Working group 2:

52. The lack of adequate and suitable training materials is a major problem for teachers. There is a great need for teaching aids relevant to local situations including textbooks, visual aids, etc., and teachers should be trained not only to use them, but also to produce them. It was suggested that teachers be allocated time for producing materials because at present heavy teaching loads preclude development in this area. Resource centres could be set up both on a national and on a regional basis. Much emphasis was laid on the need for research to be carried out to find out precisely what commercial teachers need in the way of materials to assist them in their teaching, especially on the practical side.

Working group 3:

53. It was found that the modular approach might be used in commercial training in a variety of ways but as almost no research has been done in this area this would be the first step. Office practice topics appear to lend themselves most readily to the modular approach so they might be used as the starting point. It was pointed out that since the modular approach is a new concept to commercial teachers it would be useful to arrange seminars to discuss developments and involve them in validation.

Working group 4:

54. Much stress was laid on integrating the various subjects in a commercial course. Liaison between teachers is essential in respect of preparing time-tables and subject content. Consultation between teachers would ensure that schemes of work avoid overlapping as far as possible and that the sequence of training is appropriate. Practical training as a means of integrating subjects was also stressed.

C. Training equipment and materials

55. An exhibition was organised showing a great variety of office training equipment available at the Government Secretarial College as well as a great number of textbooks in various subject areas (book-keeping, accounts, economics, commerce, office practice, shorthand, typewriting, etc.). There were also posters, tapes, slide series and training material in office practice and examples of training packages. After the exhibition and on the basis of working paper No. 2 on the same subject, the training equipment and material available on the African market was discussed.

(a) Equipment

56. There was a general complaint that there is not enough equipment available in the majority of the training institutions.[1] The training given to students can therefore not be practical enough, students and teachers become frustrated and employers complain about the inadequacy of training. Furthermore, those who have to authorise new equipment do not always understand why certain equipment is necessary for the training of office workers for the preparation of training materials.

57. All those concerned agreed that whenever equipment is donated on a bilateral basis by certain governments this creates a number of problems due to the fact that this equipment is not fully adapted to local needs: (i) inavailability of maintenance service for certain makes; (ii) lack of spare parts for these makes;

---

[1] Only those institutions who have received international or bilateral technical assistance reported to be well equipped. Some of the equipment exhibited was unknown by a number of participants.

(iii) lack of staff trained to maintain and use this equipment. It therefore often happens that equipment is not in use - and sometimes remains even unpacked for these reasons.

(b) Textbooks

58. It was agreed generally that the textbooks available on the market are inadequate for training purposes in English-speaking African countries. It was mentioned that there are too many books on certain subjects (e.g. typewriting); each teacher wants to introduce "his" book when he joins a training institution and the choice is extremely difficult.

59. However, there is a great lack of textbooks (e.g. on commerce) adapted to the African student and the African situation. One example picked out at random is the "National Giro", which being a British institution is described in the majority of textbooks without being relevant to the African continent.

60. It was consequently suggested that more African teachers should write textbooks. However, such an undertaking would appear to be extremely difficult under the present circumstances: (i) publishers are generally not interested in books to be sold at less than 10,000 copies; (ii) writers should be teachers, but the teaching load and the lack of qualified teachers do not allow for textbook writing; (iii) it takes up to five years to produce a textbook; teachers want to be paid for textbook writing; (iv) teachers have no training or experience in textbook writing.

61. It was therefore concluded that unless international assistance can be obtained it will be impossible to write and produce Africanised textbooks. Adaptation of foreign textbooks, it was mentioned, has not produced the expected results, books become extremely bulky as the tendency is to take out very little and to add a lot.

(c) Other training materials

62. It was agreed that besides the textbooks imported from Great Britain, the USA or elsewhere there is very little teaching material available to the commercial teachers in English-speaking African countries. Films and slides and other materials adapted to local situations are non-existent. To this must be added the fact that teachers are not trained in the use of audio-visual aids and even less in their production. Research is also needed to achieve the maximum use of local materials. It was agreed that there is an urgent need to establish resource centres at national and/or regional levels.

D. English language as an integral part of commercial training

63. The discussion was based on points raised in working paper No. 3. In plenary discussion the main points raised were:

(a) in some institutions English language is taught by "service" teachers who have no commercial background;

(b) lack of suitable material for developing the skills of communication in the business context;

(c) low standard of English language due to it being a third language in countries where the national language is not English; and

(d) the language standard of some teachers is not as high as is desirable.

64. It was pointed out that methods of teaching English should be included in commercial teacher training courses. There would be difficulty in including this because time was already fully utilised in these courses. Students need to be encouraged to read and to be guided in their choice of reading material to ensure that it is of a suitable level and content.

65. Group discussion covered four topics:

(a) action to be taken to ensure that every commercial teacher is also a language teacher;

(b) ways of improving the language part of commercial courses;

(c) the kinds of materials needed for language training;

(d) policy changes needed to raise the unsatisfactory language level of trainees entering commercial courses.

The following points and suggestions emerged.

66. It is essential that all commercial teachers should themselves have a high standard of language knowledge and communication skills. In countries where there are two languages, one for internal and one for external communications, there are additional problems, because English is a second and even third language and is taught in schools as such.

67. "Service" teachers should be given a business orientation course to enable them to make their teaching relevant to the content of commercial courses. They should also consult and collaborate with the commercial teachers so that there is as much subject integration as possible.

68. It was found that a teacher's certificate course for teaching English in commercial courses would be useful. This could be conducted on a part-time basis. Furthermore, all primary and secondary school English teachers should be taught the methods of teaching English as a second language.

69. The materials and equipment available for teaching English language in commercial courses are inadequate. Language laboratories would be a valuable aid in developing communication skills. The production of language training materials related to business subjects is a pressing need.

E. Shorthand systems

70. After presentation of a paper on shorthand systems by Miss J. Shaw, Technical Adviser, the participants went into plenary discussion. The main points covered included the necessity for a minimum level of language ability for those entering stenography courses. The desirability of a high level of communication skills was also stressed. Ideally, the potential stenographer should have a broad educational background.

71. The problems involved in introducing new shorthand systems were discussed. There was a fear that there could be a proliferation of systems, making the already difficult situation caused by lack of teachers even more difficult. There might also be employer resistance to new systems. It was agreed that precise guidelines for experimental courses should be carefully prepared. (A specimen set of guidelines was handed out to participants.) If possible experimental courses should consist of two groups, one learning the conventional system currently used, and one learning a new system. Results could then be compared.

72. Participants stressed two aspects of stenographers' work in government service:

(a) salary structure is geared to the attainment of speeds rather than to ability to take dictation and transcribe in the office situation. Methods of assessing salary scales in the secretarial grades should be reviewed;

(b) in most countries a stenographer is assigned to an officer of a certain grade regardless of whether he is able or wishes to dictate. Dictation skills should be taught to all officers who have the services of a stenographer or secretary.

F. Audio-typewriting

73. Working paper No. 4 formed a discussion basis. The use of audio-typewriting equipment was demonstrated and the participants had a brief practice session. They also listened to some audio dictation so that they would have an idea of an audio-typist's difficulties.

74. From discussion it was realised that audio-typewriting is relatively new in some countries. Where it is being used by employers it should be included in typewriting courses. The most effective way is a "conversion" course given to typewriting trainees when they have mastered the keyboard and can type at about 30/35 words a minute. This would probably take about 20 hours.

75. In countries where audio-typewriting is not yet used preparation for its advent later would be useful. This could be achieved by including an audio element at the keyboard mastery stage. This would be supplementary to the normal copying method.

76. As provision of equipment would be a problem in many training institutions, it was suggested that international or bilateral assistance would be valuable in this area.

G. Upgrading and specialistion

77. Working paper No. 5 was used as a discussion basis. The idea of upgrading training for all office staff including the lowest levels was a new concept to some of the participants. The difference between efficiency and promotional training was discussed. Efficiency courses aim to improve the existing employee's present job performance. Promotional courses aim to prepare trainees for a higher-level job. It was agreed that upgrading training - especially for efficiency - is needed for many existing office employees from messenger level up. Such courses would vary in duration from a few days to several months depending on the training requirements. Existing training institutions could assist by providing formal training courses to complement on-the-job training. To improve the standard of on-the-job training all employees above the level of messenger should be taught basic on-the-job training techniques as part of every course conducted for them.

78. It was thought that employer reaction to the idea of training all staff might not be very favourable. However, personal contact between trainers and employers ought to overcome this. In addition, employers should give proper induction training to all new employees.

79. It was pointed out that small organisations could not release staff for day-time training, but employers could be encouraged to sponsor their employees for evening courses. At present lack of staff and accommodation limit the number of evening classes that can be conducted. The question of the high drop-out rate in evening classes was raised. This may be mainly due to the poor quality of the teaching which lacks the motivation element. This is especially important in evening classes as trainees are tired after a day's work. The introduction of single subject teacher's certificates might encourage qualified office staff to become evening class teachers. Suitable training could be given through evening classes and/or correspondence courses.

80. On the question of specialisation it was agreed that all trainees should have a fairly broad background of commercial knowledge before choosing a particular area for further training. In addition it would be valuable if basic commerce could be included in middle and secondary school curricula as a compulsory subject, though it need not be examinable.

V. CONCLUSIONS AND RECOMMENDATIONS

A. Conclusions

81. It was obvious from the start that this first seminar on commercial training corresponded to an actual need. The interest shown in the seminar was much greater than expected, above all as far as those directly involved - teachers, principals, education officers, etc. - were concerned. There were a number of excellent contributions and a very strong desire to get away from isolation, to exchange views, collaborate in finding solutions and suggesting remedial actions. There was also a strong desire to obtain more international assistance in specific areas and above all in the training and upgrading of teachers.

B. Recommendations

82. The following recommendations are the outcome of the various seminar sessions. They have been approved in plenary discussions and are presented in subject order.

Training standards

Recommendation 1: A national consultative committee/council for commercial education and training should be established in each country composed of representatives of the ministry of education, ministry of labour, university (if relevant), commercial teacher training institutions, employers' associations, manpower planning department, examining boards, unions, private schools and any other body or organisation concerned with the training or employment of office staff. The committee/council would provide a forum for the exchange of information on employment requirements and training development.

Recommendation 2: The committee/council should appoint panels/subcommittees to set national standards for commercial occupations, viz. receptionists and telephone operators, all grades of secretarial staff, clerks including specialist areas such as accounts clerk and store clerk. The panels would consist of representatives of employers and teachers with expertise in the relevant areas of commercial training.

Recommendation 3: National standards should comprise entry levels (age, educational attainment), entry test requirements if necessary, training syllabus, final test requirements. Present examinations should be made more realistic to the job situation. Practical tests should be devised to assess a trainee's ability after training to perform an office task satisfactorily.

Teacher training

Recommendation 4: Commercial teacher training should fall into two categories:

(a) basic teacher training prior to recruitment into teaching; and

(b) upgrading and refresher courses for existing teachers.

Recommendation 5: Basic teacher training. It is recommended that the duration of courses should be from one to three years depending on entry level and experience of trainees. The course content should include: education, language and communication skills, teaching methods and techniques, applied methods relating to skill subjects including the teaching of communication skills, use and production of teaching aids, job analaysis and simple clerical work measurement techniques. Job experience and teaching practice should be integral parts of the course. Correlation and integration of subjects within commercial courses should be emphasised.

Recommendation 6: Upgrading and refresher courses for existing teachers. The courses should cover subject matter and teaching techniques as required, and the use and production of teaching aids. It is recommended that international assistance be sought to set up the necessary facilities on a national or regional basis.

Training methods and techniques

Recommendation 7: Research should be undertaken at international level to determine when and how modular training should be applied to commercial training. Commercial training specialists should first be trained in job and task analysis.

Recommendation 8: All commercial courses leading to employment should include job experience.

Training equipment and materials

Recommendation 9: The United Nations should consider the possibility of establishing resource centres for the following regions:

(a) East Africa;

(b) West Africa;

(c) Northern Africa;

(d) Southern African States: Botswana, Malawi, Lesotho, Swaziland and Zambia.

Recommendation 10: Such centres should:

(a) act as a centre for all training aids related to commercial training;

(b) serve as a centre for training instructors in the production and use of training aids including audio-visual aids, textbooks, etc.;

(c) be involved in research and the adaptation of training aids to suit the needs of each region;

(d) pool resources on a regional basis to foster organisational effectiveness to deal with specific problems related to training aids.

Recommendation 11: International agencies and bilateral donor governments should make sure that:

(a) there is maintenance service available in the country for the equipment provided;

(b) equipment to be delivered with a supply of basic spare parts;

(c) training be given to staff to use this equipment effectively.

Selection and testing

Recommendation 12: Vocational guidance should be given in middle and secondary schools to ensure that trainees undergo suitable training. Aptitudes could be assessed by appropriate tests to assist in selection.

Recommendation 13: Selection levels for stenography courses should be at least General Certificate of Education "O" level or equivalent particularly in relation to language. Tests should be established to assess communication skills, the level of which should be one of the criteria for selection.

Recommendation 14: Heads of commercial studies institutions or departments and teachers should be involved in the selection of trainees.

Upgrading and specialisation

Recommendation 15: Upgrading training should be provided for all levels of office staff including messengers, receptionists, telephone operators, clerks (including specialist clerks such as accounts and stores), all grades of secretarial staff, sales assistants, tellers and cashiers. The training should be given off the job as well as on the job when necessary.

Recommendation 16: For more advanced on-the-job training and in-service training senior clerical employees should be given short courses in instruction techniques.

Recommendation 17: Training in audio-typewriting should be undertaken where this is required by employers. Teachers should be trained in the special techniques and the necessary equipment should be provided.

English language

Recommendation 18: To raise the standard of English language presently attained by entrants to commercial courses much more emphasis should be placed on communication skill training in nursery, primary and secondary schools.

Recommendation 19: English language teachers in commercial courses should be given short orientation courses to give them an understanding of basic business procedures and of business terminology.

Shorthand

Recommendation 20: Controlled experimental courses should be conducted in accordance with carefully prepared guidelines to compare systems and to assess the advantages and disadvantages of new shorthand systems in training stenographers to achieve adequate employment standards.

Consultation and co-operation

Recommendation 21: Commercial teachers should form an association at national and regional levels to disseminate information and exchange ideas.

Recommendation 22: It is recommended that to encourage the development of commercial training, as well as the constant exchange of ideas and information between teachers and others concerned, regional seminars such as the present one should be organised at regular intervals.

Recommendation 23: There should be greater co-operation and consultation between training institutions and employers than exist at present in some countries. This would assist in organising job experience programmes for trainees and in ensuring that training courses are relevant to employment needs. Job definitions should be drawn up by training institutions and circulated with questionnaires to employers to establish the job content applicable to specific job titles.

Recommendation 24: Management training courses should include:

(a) training in the effective use of secretarial staff;

(b) training in audio and live dictation skills.

Conditions of service for teachers

Recommendation 25: Adequate salaries and incentives should be offered to attract and retain commercial teachers. Teachers should be allowed sufficient time to prepare materials and training aids for practical subjects. Ideally, classes should not exceed 25.

Annex 1

Leadership and secretariat

Director	Miss Karin Schramm, ILO headquarters
Technical Adviser for East Africa	Mrs. Karin Bäcker, ILO/SIDA
Technical Adviser for West Africa	Miss Josephine Shaw, ILO headquarters
Seminar Secretary	Mrs. Terry Navratil, ILO headquarters
Administrative Assistant	Mr. Yilma Sahle, ILO Regional Office for Africa

Group discussion questions

Training standards

Discussion group 1: Ways of improving inadequate standards

1. What factors contribute to the present inadequacy of standards? (Limited range of training, selection methods and standards, limited finance, course content, training approach, teacher's lack of job experience, etc.) Give specific indications.

2. What action should be taken to improve the standards -

   (a) by teachers/instructors?

   (b) by employers?

   (c) by governments?

   (d) on an international basis?

Discussion group 2: Teacher training

1. It has been stated that teacher training is fundamental to the improvement of standards.

   (a) What levels of teacher training are required?

   (b) What should be the duration of training at each level?

   (c) What should be the content of training at each level?

   (d) What should the intake requirements be for each level of training?

   (e) What type of qualification is required at each level?

2. Upgrading of existing teachers is essential.

   (a) How should this be undertaken - in-service training? vocational training? correspondence courses?

   (b) Where should the emphasis be placed in upgrading training - subject matter? teaching techniques?

   (c) Who should be responsible for organising and conducting upgrading teacher training?

3. Teacher training presupposes that there are facilities and qualified staff to do the job.

   (a) What facilities exist? Where are they?

   (b) What qualified staff are there? Are there sufficient numbers of them?

   (c) If not, how should more teacher trainers be made available? What level should they be? How should they be trained?

Discussion group 3: National standards: examinations and testing

1. Who and what organisations should be involved in setting national standards for commercial occupations?

27

2. How should the necessary consultation be achieved?

3. For what occupations could national standards be set?

4. How could existing institutional training programmes be made more flexible to meet the practical qualifications demanded by national standards?

5. What non-institutional ways could be found to supplement and complement the formal training?

6. Are existing examinations adequate for proving that a trainee can perform satisfactorily in a given occupation? If not, what kind of tests could be devised for this purpose? Should they be external or internal?

Discussion group 4: Aptitude testing and vocational guidance

1. For what aspects of commercial training could aptitude testing be useful in selecting trainees?

2. In what ways could aptitude testing help in ensuring that the right trainees are selected for specific courses (or that trainees are given the right training)?

3. At what stage would aptitude tests be appropiate for various levels of commercial training?

4. In general what kinds of aptitude test are applicable to commercial training?

5. How and when should vocational guidance be made available to potential commercial trainees?

6. What are the problems involved in providing vocational guidance and how can they be overcome?

Teaching methods and techniques

Discussion group 1: Practical office training

1. What problems are involved in organising such training?

    (a) Making employers understand the advantages of such training;

    (b) finding the most suitable working places;

    (c) stating the objectives of the training;

    (d) ensuring that the objectives are achieved;

    (e) payment of the trainees;

    (f) other financial aspects.

2. How should the training be arranged?

    (a) Advantages and disadvantages of day release and "sandwich" training;

    (b) supervision;

    (c) practical aspects like transport, etc.

3. How can instructors ensure that the students get the right type of training according to their standard and stage in training?

4. To make the practical training meaningful for the students, what is involved in preparing them for it and in following up the training by building on their experiences afterwards?

Discussion group 2: Resource centres

1. Discuss advantages and disadvantages of resource units/centres.
2. Should they be institutional, national, regional and/or international?
3. What problems are involved in the organisation of such centres?
4. What kind of training materials should be kept there?
5. How could these materials be easily available?
6. How should the control and care of the equipment be arranged?
7. How to train staff?
8. The cost factor?
9. Any other aspects.

Teaching methods and techniques

Discussion group 3: The applicability of the modular approach to commercial training

1. In what areas of commercial training could the modular approach be applied?
2. What problems might arise in implementing modular commercial training?
3. What existing problems might be solved by the modular approach?
4. The production of modular training materials is a long and complex task. The cost factor is also a problem. How could these difficulties be overcome?

Discussion group 4: Integration of subjects

Integration of the commercial subjects should help trainees to get a broader understanding of how the office functions, of their own part in the organisation, of the commercial field as a whole.

1. Give concrete examples of how integration could be put into practice at the training institution.
2. How can such integration be planned when the scheme of work is being drawn up?
3. What are the difficulties in terms of extra equipment, extra space, extra workload for the instructors, and how could they be dealt with?
4. Any other aspects or comments.

English language as an integral part of commercial training

Discussion group 1: What action can be taken to ensure that every commercial teacher is also a language teacher?

Discussion group 2: How can the language part of commercial courses be improved?

Discussion group 3: What kind of materials are needed for language training?

Discussion group 4: What policy changes are needed to raise the unsatisfactory language level of trainees entering commercial courses?

DESCRIPTIVE NOTE: 23P.; M.A. THESIS, UNIVERSITY OF KENTUCKY

ABSTRACT: THIS STUDY INVESTIGATED THE RELATIONSHIPS BETWEEN PERSONALITY AND MOOD VARIABLES AND STRATEGY AND TACTICS IN AN INFORMATION SEEKING GAME. FOUR MEASURES OF PERSONALITY AND MOOD WERE GIVEN TO 85 MALE AND FEMALE UNDERGRADUATE SUBJECTS, EACH OF WHOM SOUGHT INFORMATION ABOUT, AND GAMBLED UPON, FIVE HORSE RACES PRESENTED ON CLOSED-CIRCUIT TELEVISION. DEPENDENT VARIABLES IN THE STUDY WERE BROKEN DOWN INTO THOSE WHICH INDICATED TASK SOLUTION TACTICS. STRATEGIES INCLUDED RISK TAKING, FOCUS, AND CLOSURE. TACTICS INCLUDED TYPE (SUCH AS RACING FORM) AND NUMBER OF INFORMATION ITEM PURCHASED. A ZERO-ORDER CORRELATION MATRIX WAS COMPUTED WITH THE PRINCIPLE RESULTS AS FOLLOWS: (1) PERSONALITY FACTORS TENDED TO SHOW CORRELATION TRENDS OVER FOUR TRIALS WITH STRATEGIES BUT NOT WITH TACTICS; (2) MOOD FACTORS TENDED TO SHOW CORRELATION TRENDS OVER FOUR TRIALS WITH TACTICS BUT NOT WITH STRATEGIES; AND (3) ONLY FOR ONE STRATEGY (CLOSURE) WAS THERE A RELATIONSHIP SHOWN WITH MOOD (CONCENTRATION). A STUDY OF CORRELATES OF STRATEGY AND TACTIC IN INFORMATION SEEKING BEHAVIOR*

E. NORMAN SIMS
Coordinator of Information Dissemination
Kentucky Department of Education

E. NORMAN SIMS. Mr. Sims is Coordinator of Information and Dissemination in the Research and Development Unit, Kentucky Department of Education. Mr. Sims received his M.A. degree from the University of Kentucky and has interests in the areas of: the social effects of communication technology; technical and scientific communications and innovation strategies; and, information diffusion systems.

---

* This study was based on work done by the author and other graduate students at the University of Kentucky and, offered in partial fulfillment of the M.A. degree at that university. The Experimenter wishes to thank the Keenland Association (Keenland Race Track) for the use of films made of their October 26, 1971, racing day, for this study.

A STUDY OF CORRELATES OF STRATEGY AND TACTIC IN INFORMATION SEEKING BEHAVIOR

ABSTRACT

This study investigated the relationships between personality and mood variables and strategy and tactic in an information seeking game. Four measures of personality and mood were given to 85 male and female, undergraduate Ss, each of whom sought information about, and gambled upon, five horse races presented on closed-circuit television. Principal results were: (a) personality factors tended to show correlation trends over four trials with strategies, but not tactics; (b) mood factors tended to show correlation trends over four trials with tactics, but not with strategies; (c) only in one strategy (closure) was there a relationship with mood.

Introduction

There have been many different questions asked concerning factors which influence the amount and type of predecisional information organisms seek to obtain in task situations. Kogan and Wallach (1967), for example, list three.

Dissonance theorists operate from the premise that predecisional information seeking is unselective (Festinger, 1964) in the sense that the individual has no content preferences, other than that the content be relevant to the decision. Chaffee and Tipton (Chaffee, et al., 1969) note that even in predecision states there is a preference for messages containing attributes that can be used to discriminate choices.

From this viewpoint Donohew and Tipton (1974) developed two strategies which individuals might use in seeking information: broad-focus and narrow-focus. A broad-focus strategy is one that initially involves identifying potential sources of information and inputting them on a relatively non-selective basis. The broad-focus strategy could be said to be analogous to deductive thinking--movement from the general to the specific.

A narrow-focus strategy is one in which the subject at first focuses on one source of information and adds sources and ideas as he comes across them. The narrow-focus strategy would, then, be analogous to the inductive thinking strategy--movement from the specific to the general.

While a good case is made for such a strategy concept, it was our thinking that information seeking could be viewed in terms of tactic as well. For our purposes we are defining the concept of information as any message, that a person expends effort to attend to (including holding still for), which would decrease error in some task situation (Donohew and Tipton, 1974; Brown, 1966).

Strategy is generally defined as a method of achieving an end, or the skillful employment and coordination of tactics. Strategy would seem to be most important in the development of 'set' or approach to problems in general: this notion assuming that the S's strategy in one situation will be pretty much the same in a similar information seeking situation.

Tactics is usually defined as a device for accomplishing an end employing available means to accomplish said end, or a particular expedient.

The differences between the two lie in: (a) strategy is related to 'search', while tactic is related to 'action'; and, (b) strategy is related to general 'sets' towards problems--such as would be the case with focus--while tactics relate to particular expedients used in problem solution--such as type of information sought.

It is also our thinking that strategies, being general information seeking sets towards problem solution, should relate to the individual's 'image of reality' as measured by personality factors. On the other hand, tactics, being related to specific seeking actions, will be dependent upon factors of mood during the period of seeking rather than factors of personality.

A study was, therefore, conducted to determine if strategies are related to specific personality factors, and if states of mood would correlate with tactics. The measures of personality chosen for the study were: self-esteem, sensation-seeking, and dogmatism (open or closed-mindedness). The measures of mood chosen for the study were: aggression, concentration, depression, egotism, and pleasantness.

Aspects of strategy chosen for the study were:

a. Risk taking, which is the exposure to possible loss or injury. The difference between risk and uncertainty being that risk entails loss. It is assumed that risk taking is a strategy and that individuals who are cautious in one seeking situation will also be cautious in similar seeking situations. The notion of risk taking being by nature a strategy is partially supported by Kogan and Wallach (1967).

b. Broad or narrow-focus, which has been previously defined. The assumption being that those who are narrow or broad-focusers in one seeking situation will have similar strategies in other, similar, situations. Focus, as strategy, is somewhat supported by results in another study (Donohew and Tipton, 1974).

c. Closure. Closure, though it was listed as a strategy for the purposes of this study, is seen as a meeting point between strategy and tactics with both mood and personality having an effect on it. Closure is defined as the point at which the S decides to quit seeking information and begin action.

Aspects of tactic chosen for the study were: (a) particular type of information sought; and, (b) number of specific items bought.

We hypothesized that if our assumptions were true, we would find, with a matrix of zero-order correlations, the following relationships:

1. Personality factors, as independent variables, correlating with aspects of strategy.
2. Mood factors, as independent variables, correlating with aspects of tactic.
3. Personality factors not correlating with tactics.
4. Mood factors not correlating with strategies.
5. Mood and personality factors correlating with multiple order activities such as closure.

Method

1. Subjects

The subjects were 85 male and female undergraduate volunteers attending the basic public speaking course at the University of Kentucky. Subject participation in the experiment was reinforced by extra grade credit.

2. Measures of Personality

Rosenberg Scale of Self-Esteem, RSSE (Rosenberg, 1965): This questionnaire consists of ten multiple choice statements; the choices are keyed towards greater self-esteem.

Sensation-Seeking Scale, SSS (Zuckerman, 1964): This questionnaire consists of 34 forced-choice items; the keyed statement in each pair is the statement that reflects greater 'sensation-seeking'.

Short-Form Rokeach Dogmatism Scale, SRDS (Troldahl and Powell, 1965): This questionnaire consists of 20 multiple choice statements; the foils in each statement keyed towards greater dogmatism.

3. Measures of Mood

Nowlis Mood Scale, NMS (Green and Nowlis, 1957; Nowlis, 1963): This questionnaire consists of 24 multiple choice items: the items are keyed to assess feelings of aggression, concentration, depression, egotism, and pleasantness. The factors are represented by the following sets of adjectives (Norris, 1968):

Factor I: Aggression (AGG); rebellious, hostile, fed-up, annoyed, defiant, grouchy.

II: Concentration (CON); concentrating, intent, serious, contemplative.

III: Depression (DEP); sad, regretful, sorry.

IV: Egotism (EGO); self-centered, egotistic, boastful.

V: Pleasantness (PLS); carefree, relaxed.

4. Measures of Strategy

Risk Taking, (RT). Risk taking was operationally defined as the percent of money held which was bet, times the odds of winning for the horse bet on, divided by the chance of receiving a return for the bet made. The assumptions made were: that the higher the percentage of money held which was bet, the higher the risk of loss; the greater the odds on the horse, the higher the risk; and the lower the probability of a return the higher the risk.

For example; a bet of 20% of the S's cash-on-hand, on a 20 to 1 horse, bet to win, would become:

$$20 \cdot 20/1 = 400$$

A bet of 10% of the S's cash-on-hand, on a 5 to 1 horse, bet to show, would yield:

$$10 \cdot 5/3 = 16.6$$

9

The higher the index, the higher the risk. A statistical consideration of risk can be found in Edwards (1954).

Focus, (FOC). For this study broad and narrow-focus were operationally defined in terms of type of information bought (buying a Racing History Sheet was narrow-focus, Best Times was broad-focus), and order of buying (movement from buying a Racing History Sheet to buying Best Times, for example, was broad-focus). A low focus score indicated a narrow-focus; a high focus score indicated a broad-focus.

Closure, (CLO). Closure is the point at which the S decides to quit seeking information and act. Ss were timed from the opening of the Information Table (IT) to the placing of their bet. Times of closure were divided into quartiles running from early closure (lower quartile) to late closure (upper quartile).

5. Measures of Tactic

Types of Information Items Bought. Ss were able to purchase three types of information:

> Best Times, (BT). The BT array listed each horse in the race by number and gave that horse's best time for a race of that length. This sheet gave some indication of how all of the horses ran at their best.
>
> Expert's Prediction, (EP). The EP array contained three numbers. These numbers indicated which horses, in the expert's opinion would win, place, and show.
>
> Racing History Sheets, (RHS). The RHS listed a horse's racing record for the past 2 years. Individual sheets were offered for each horse in the race. Information listed on the horse was: starts, wins, places, and shows.

Number of Items Bought, (NIB). This measure was one of total number of items bought for each race. Lowest number possible was no items bought; highest possible was 7.

6. Procedure

Subjects were each given a three-page game instruction booklet at least 24 hours before test time. This booklet told the subjects that they were taking part in a study of information-seeking behavior, and that they would not be tricked in any way. Subjects were instructed that the game would yield information as to how different kinds of people go about getting information. They were told that they would be given $75 in 'Wildcat Money' to use in playing the five race games, and that the money might be used to purchase information on betting and to bet on the horses. They were also told that after each race they would be given some short forms to fill out.

The instruction booklet contained information concerning types of information available and their price; information concerning betting procedures; and information concerning bet payoff procedures.

These instructions were repeated for the subjects in the pre-game preparation period before the first race. Extra information booklets were also available. Subjects were told not to reveal the results of the races to other test subjects or let any other participant see the information sheets they had purchased.

Subjects were run through the game over four test sessions. Highest number of subjects run at any one session was 34; lowest was 8.

During the pre-game period, each subject was given printed number tags which were pinned to the subjects' fronts and backs. They used the number, and not their name, throughout the study. The numbers permitted the videotaping of the first session so that it could be studied for interpersonal information-seeking behavior.

Subjects were also asked to fill out the various personality scale forms (RSSE, SSS, SRDS), a pre-game NMS, and a test of prior knowledge of the game.

Before the first race, and before each following race, the subjects were given a Racing Program (RP) for that race. The RP was free and was given to all of the subjects prior to each race. The RP listed the entries in the race (by number, not by horse name as horse names were never used during the game in a seeking situation) and the morning odds on each horse. Subjects were instructed that the odds were an early estimate of the amount of money the subject could expect to receive from a $2 bet if the horse won, and that the odds were also a rough indication of the horse's chances of winning. Jockey names were never given or used in the game.

The subjects were then told how much time they had in which to gather their information and make their bets before the race began and the information table and betting window closed. They were given 6 minutes to study the information before the first race; 8 minutes before the second race; 4 minutes before the third race; 8 minutes before the fourth race; and 4 minutes before the fifth race.

The three purchasable items--Best Times, Expert's Prediction, and Racing History Sheets--were all obtainable at the Information Table. Cost of Best Times array was $2; Expert's Prediction array, $2; Racing History Sheet, $1. Concerning the subjects' purchasing information: the experimenter noted the information bought, and the order of his buying, on the S's Data Array Card (DAC) which he carried with him and had to present in order to buy information or make a bet. The DACs were collected at the end of each session.

There were two betting windows and the subjects were able to make bets at either. The subjects were told to make their bets as soon as they had decided on a horse. They were allowed to bet on one horse only. They were able to bet on that horse to win, place, or show in any amount desired as long as they held enough money to cover the bet. The bet and the time at which it was made were marked on the DAC.

At the end of the seeking period the Information Table and betting windows were closed. The race was then shown over closed-circuit television. The race was called using the horses' names and numbers to add authenticity. The results of each race and payoff prices appeared on the television at the conclusion of each race. The subjects were required to cash in their winning 'tickets' as soon as the results were posted.

At the end of each race each participant was asked to fill out a post-race NMS and interpersonal information seeking questionnaire which were collected as the subjects picked up their Racing Program for the next race.

At the session's end the participants were asked to turn in all information and any money left over.

A zero-order correlation matrix of all variables was then computed.

Results

Significant intercorrelations between the three personality factors and the three search strategies are presented as blocks in Table 1. Significant intercorrelations between the five mood factors and the four action tactics are presented in Table 2. As can be noted, the correlations are moderate and, while they are not significant for each trial, they do tend to indicate trends. As trial one--race one--was a base-line trial intended to give the Ss experience in playing the game, it has been deleted from these blocks. Only those correlation blocks were accepted for consideration which contained at least two correlations at the .09 level of significance or below. If the block contained two such correlations, but one was a positive value and the other a negative value, the block was not accepted. This rejection of blocks with only one significant correlation was utilized to rid the study of any spurious correlations.

Trends are demonstrated for both personality factors and search strategies, and mood factors and tactics.

Table 1 About Here

Personality Factors and Search Strategies: RSSE yielded low-order correlations with risk taking on all trials, though only one trial yielded results at the .01 level. SSS yielded moderate negative correlations with focus behavior on all trials while yielding low-order correlations with closure. Significance of correlations for SSS and closure was poor; the best being at the .088 level. SRDS yielded low-order correlations with focus on all trials. Significance was never below .082 on any trial. There were no apparent significant trends in correlations for: RSSE and focus; RSSE and closure; SSS and risk taking; SRDS and risk taking; and, SRDS and closure.

Table 2 About Here

Mood Factors and Tactics: Concentration yielded moderate positive correlations on all trials for utilization of Best Times, and low-order correlations for number of information items bought. Depression yielded moderate correlations with Best Times and Expert's Prediction with better significance values for Best Times. Aggression showed a trend

14

towards correlations with buying Racing History Sheets at significant levels for at least two trials. Egotism showed moderate negative correlations with Expert's Predictions on three trials. Pleasantness showed low-order negative correlations in two trials. There were no significant trends for: Concentration and Expert's Predictions; Concentration and Racing History Sheets; Depression and Racing History Sheets; Depression and Number of Items Bought; Aggression and Best Times; Aggression and Expert's Predictions; Aggression and Number of Items Bought; Egotism and Best Times; Egotism and Racing History Sheets; Egotism and Number of Items Bought; Pleasantness and Best Times; Pleasantness and Racing History Sheets; or, Pleasantness and Number of Items Bought.

Personality Factors and Tactics: There were no significant trends in correlations between the personality factors and tactics. This is as was expected.

Mood Factors and Strategies: There was only one block showing significant trend between a mood factor and a strategy. These correlations are shown in Table 3.

Table 3 About Here

The results show a moderate positive correlation between CON and CLO for three trials. There were no other correlations among mood factors and strategies. This is as was expected.

Discussion

We have stated that if there is a relationship between personality and mood variables, this relationship would be demonstrated in correlations between personality variables and seeking strategies, and mood variables and action tactics. In the absence of previous experimentation, there seemed to be no sound a priori basis for predicting which of the personality factors would correlate with which of the strategies, or which mood factors would correlate with which of the tactics. Because the major purpose of the study is to provide data to permit the generation of testable hypotheses about the relationships between personality variables and strategies, and mood factors and tactics, treating the results in the way described seems partially justified. However, because the data were handled as they were--selecting comparisons to be made on an a post-teriori basis--the results that follow must be regarded as hypotheses to be confirmed or disconfirmed by subsequent research.

Table 1 shows that there is a tendency for personality factors to dictate information seeking strategies. In contrast, mood factors had little effect on strategies except in the case of closure, which, as we have noted, is as much a tactic as a strategy. Subjects who scored high on self-esteem also tended to be greater risk takers, while subjects who scored low on self-esteem tended to be cautious in their behavior. Subjects who scored high as sensation seekers tended to be narrow-focusers; also they tended to exert closure sooner than other subjects. While a correlation between high sensation-seeking and high risk taking was expected, the results did not indicate such a trend. Subjects who scored high in dogmatism (were closed-minded) also tended to be broad-focusers. In a previous study (Donohew and Tipton, 1974), dogmatism was not found to be directly related to any other variable.

Table 2 indicates that there is a tendency for mood factors to dictate information seeking (or 'task') tactics. In contrast, personality factors had no effect. Subjects who scored highly on concentration prior to a trial also tended to be purchasers of Best Times information and buy more items than other subjects. Subjects who said that they were depressed prior to a trial, tended to be purchasers of Best Times and Expert's Predictions. Subjects who reported an aggressive mood prior to a trial tended to be purchasers of Racing History Sheets. Subjects scoring high on egotism tended to not be purchasers of Expert's Predictions, while those low in egotism purchased Expert's Predictions. This would be, of course, highly related to the subject's self-esteem. Subjects scoring high on pleasantness tended to not buy Expert's Predictions. It is important to remember, in terms of type of information bought, that amount of information increases as the ubject moves from Racing History Sheet to Expert's Prediction to Best Times. It is also important to note that another study (Cameron and Myers, 1966) indicates that such trends are found in both real and imaginary betting situations; at least for risk taking.

The significant feature of the preceding results is the finding that there appears to be some relationship between personality factors and information seeking strategies; and between mood factors and task solution tactics. Only in one case, closure, were both personality and mood factors related to the strategy. Personality factors did not tend to be related to any tactic studied. The results tend to reject Festinger's notion that predecisional information seeking is unselective because the individual has no content perferences. This study tends to indicate that there are such preferences but they are related to personality and mood rather than content.

Summary

To investigate the relationship between personality and mood variables, four measures of personality and mood were given to 85 male

and female undergraduate Ss, each of whom sought information about, and gambled upon, five horse races presented on closed-circuit television. The betting done with 'play-money'. Dependent variables in the study were broken down into those which indicated information seeking strategies, and those which indicated task solution tactics. Strategies included risk taking, focus, and closure. Tactics included type of item bought and number.

A zero-order correlation matrix was computed with the principal results as follows: (a) personality factors tended to show correlation trends over four trials with strategies, but not with tactics; (b) mood factors tended to show correlation trends over four trials with tactics, but not with strategies; (c) only for one strategy (closure) was there a relationship with mood (concentration).

TITLE: STATE ADVISORY COUNCILS ON ADULT EDUCATION.

PERSONAL AUTHOR: BRIGHTMAN, SAMUEL C.

DESCRIPTOR: *ADVISORY COMMITTEES; *ADULT EDUCATION; *NATIONAL SURVEYS; FEDERAL LEGISLATION; STATE PROGRAMS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 52P.

ABSTRACT: THIS REPORT PRESENTS THE RESULTS OF A SURVEY TO OBTAIN A SUMMARY OF THE STATUS OF STATE ADVISORY COUNCILS ON ADULT EDUCATION. AN EXCERPT FROM THE ADULT EDUCATION ACT THAT PERTAINS TO STATE ADVISORY COUNCILS AND THE PRESCRIBED RULES AND REGULATIONS APPEARS IN THE REPORT. THE BODY OF THE REPORT IS COMPRISED OF THREE SECTIONS. THE FIRST SECTION PRESENTS SOME GENERAL CONCLUSIONS ON THE STATUS OF STATE ADVISORY COUNCILS IN GENERAL; A TABULAR SUMMARY BY STATE, INCLUDING THE TRUST TERRITORIES AND WASHINGTON, D.C.; AND A SECTION OF BRIEF STATE PROFILES IN NARRATIVE FORM. THE SECOND PART CONSISTS OF A TABLE OF THE STATE AND TERRITORIES INDICATING THE METHOD OF SELECTION OF STATE EDUCATION BOARDS AND CHIEF STATE SCHOOL OFFICERS. THE STATE TABLE OF PART THREE SHOWS THE AMOUNT OF FEDERAL FUNDS ALLOCATED TO EACH STATE FOR VOCATIONAL EDUCATION AND THE ADDITIONAL AMOUNT ALLOCATED FOR THE STATE VOCATIONAL EDUCATION ADVISORY COUNCIL. THE SAME TABLE SHOWS THE AMOUNT THAT CAN BE TAKEN OUT OF THIS FOR ADMINISTRATIVE PURPOSES. (AUTHOR/NJ)

Preface

The primary purpose of this Council publication is to present a status report and summary of state advisory councils on adult education. It is not restricted to those states that, in the Council's survey, indicated state councils were operating with the use of federal funds, but also includes information on all adult education advisory activities at the state level.

With the completion of this status report, continued analysis will be required in order to develop legislative thrusts at both the state and federal levels relating to advisory councils for adult education.

The National Advisory Council has a congressional mandate to make recommendations relative to legislative specifications for the present Federal Adult Education Act and components for legislation in the future.

The Council is appreciative of the assistance it received from directors of adult education at the state level in compiling this report.

Brent H. Gubler, Chairman

Introduction

Section 310(a) of the federal Adult Education Act (P.L. 91-230 as amended) provides that any state which participates in the federal Adult Education program may organize a state advisory council. The statute says it shall be appointed by the Governor, or, when a state board is elected, may be named by that body.

The general language of the statute was followed by specific regulations prepared by the Office of Education which amplified the "shall" requirements of the law with "shoulds."

Inspection of the statute, the regulations and guidelines for preparing state programs, which are printed at the end of this introduction, shows that the "should" sections of the regulations amplified "persons who are representative of the general public" to suggest that members of specific sub-groups within the general public such as women, minorities, and the elderly be appointed to state councils.

The Office of Education has interpreted the broad language of the statute to say that federal funds expended on state councils must come from the approximately 5 percent of state grants allocated for administrative expenses.

It was in this context that the National Advisory Council on Adult Education, which will receive annual reports from state councils operating under the federal law, decided that it would be useful to the National Advisory Council, to the Office of Education, and to adult education administrators to know what states had adult education advisory councils and what actions these groups were taking.

The Council authorized a survey to obtain this information. The results of that survey constitute this publication.

The Adult Education Act

This is an excerpt from the Adult Education Act, P.L. 91-230, and its amendments through August 21, 1974, concerning state advisory councils on adult education.

State Advisory Councils

Section 310A. (a) Any State which receives assistance under this title may establish and maintain a State advisory council, or may designate and maintain an existing State advisory council, which shall be, or has been, appointed by the Governor or, in the case of a State in which members of the State board which governs the State education agency are elected (including election by the State legislature), by such board.

(b) (1) Such a State advisory council shall include as members persons who, by reason of experience or training, are knowledgeable in the field of adult education or who are officials of the State educational agency or of local educational agencies of that State, persons who are or have received adult educational services, and persons who are representative of the general public.

(2) Such a State advisory council, in accordance with regulations prescribed by the Commissioner, shall--

(A) advise the State educational agency on the development of, and policy matters arising in, the administration of the State plan approval pursuant to section 306;

(B) advise with respect to long-range planning and studies to evaluate adult education programs, services, and activities assisted under this Act; and

(C) prepare and submit to the State educational agency, and to the National Advisory Council on Adult Education established pursuant to section 311, an annual report of its recommendations, accompanied by such additional comments of the State educational agency as that agency deems appropriate.

(c) Upon the appointment of any such advisory council, the appointing authority under subsection (a) of this section shall inform the Commissioner of the establishment of, and membership of, its State advisory council. The Commissioner shall, upon receiving such information, certify that each such council is in compliance with the membership requirements set forth in subsection (b) (1) of this section.

(d) Each such State advisory council shall meet within thirty days after certification has been accepted by the Commissioner under subsection (c) of this section and select from among its membership a chairman. The time, place, and manner of subsequent meetings shall be provided by the rules of the State advisory council, except that such rules shall provide that each such council meet at least four times each year, including at least one public meeting at which the public is given the opportunity to express views concerning adult education.

(e) Each such State advisory council is authorized to obtain the services of such professional, technical, and clerical personnel as may be necessary to enable them to carry out their functions under this section.

Rules and Regulations

STATE ADVISORY COUNCILS

166.4 Establishment and certification.

(a) Establishment. Each State which receives funds under section 304 of the Act and the regulations in this part for any fiscal year may establish and maintain a State advisory council, or may designate and maintain an existing State advisory council, which shall be, or has been appointed by the Governor or, in the case of a State in which members of the State board which governs the State education agency are elected (including election by the State legislature), by such board.

(b) Certification. The State educational agency shall notify the U.S. Commissioner of Education of the establishment of, and membership of, its State advisory council. The notification shall be attached to the State plan or be submitted as an amendment thereto in such cases where an advisory council is established after the State plan has been approved. Such notification shall include the name, education, experience, and current position of each person serving on the State advisory council and shall specify which interest under 166.5 each person represents. Forms for the certification of State advisory councils may be obtained from the U.S. Office of Education, Division of Adult Education, Regional Office Building No. 3, 7th and D Streets, S.W., Washington, D.C. 20202. Upon receiving such notification, the Commissioner shall, as appropriate certify that each such council is in compliance with the membership requirements set forth in the Act and in this subpart.

(c) Funding. A State advisory council which is funded solely from non-Federal sources which are not part of the 10 per centum State matching is not required to comply with the statutory requirements of section 310A of the Act no 166.4 through 166.10.
(20 U.S.C. 1208b)

10

166.5 Membership.

In order to effectively reflect the diverse interests and needs of the general public served by the Act, the membership of the State advisory council should include a significant proportion of women, the elderly, minorities, and educationally disadvantaged. The membership of the council shall also be organized to include:

(a) Persons who, by reason of experience or training, are knowledgeable in the field of adult education or who are officials of the State educational agency or of local educational agencies of that State;

(b) Persons who are receiving or have received adult educational services; and

(c) Persons who are representative of the general public.

(20 U.S.C. 1208b)

166.6 Functions and responsibilities.

The State advisory council shall:

(a) Advise the State educational agency on the development and administration of the State plan approved pursuant to the Act and the regulations in this part;

(b) Advise the State educational agency on policy matters arising in the administration of the Act and the regulations in this part;

(c) Advise the State educational agency with respect to long-range planning;

(d) Advise the State educational agency with respect to studies for evaluating adult education programs, services, and activities assisted under the Act; and

(e) Prepare and submit to the State educational agency, the National Advisory Council on Adult Education, established pursuant to section 311 of the Act, and the U.S. Commissioner of Education, an annual report of its recommendations, accompanied by such additional comments of the State educational agency as that agency deems appropriate.

(20 U.S.C. 1208b; 20 U.S.C. 1231a(a)(3))

166.7 Meetings and rules.

Each State advisory council shall meet within 30 days after certification by the Commissioner and select from among its membership a chairman. The time, place, and manner of subsequent meetings shall be provided by the rules of the State advisory council. Such rules shall provide for not less than four meetings each year including at least one public meeting at which the public is given the opportunity to express views concerning adult education.

(20 U.S.C. 1208b)

166.8 Staff.

Each State advisory council is authorized to obtain the services of such professional, technical, and clerical personnel as may be necessary to enable it to carry out its functions under the act.

(20 U.S.C. 1208b)

166.9 Compensation.

Members of the State advisory council and its staff, while serving on the business of the council may receive subsistence, travel allowances, and compensation in accordance with State law, regulations, and practices applicable to persons performing comparable duties and services.

(20 U.S.C. 1208b)

166.10 Allowable costs.

Costs incurred by State advisory councils established pursuant to section 310A of the Act are allowable expenditures of Federal funds granted to the States under section 305 of the Act and of the non-Federal share of State and local funds necessary to earn such Federal funds.

(20 U.S.C. 1203; 1208b)

State Adult Education Programs

Appendix C — Guidelines for the Preparation of Annual Program Plans

State and local advisory councils and committees--(1) State advisory councils. Any State which receives assistance under this title may establish and maintain a State advisory council, or may designate and maintain an existing State advisory council, which shall be, or has been, appointed by the Governor, or, in the case of a State in which members of the State board which governs the State educational agency are elected (including election by the State legislature), by such board. Such advisory councils should include members of the client group, as set forth in the Act and in 166.5 of the regulations. It is recommended that representation of women, the elderly, minority and ethnic groups, persons of limited English-speaking ability, and the educationally disadvantaged comprise not less than 50 percent of the membership of the State advisory council. It is also suggested that the annual program plan describes how the advisory council, if such a council exists, might assist in carrying out the activities authorized under the Act and Subpart B of the regulations in 45 CFR 166.4 through 166.10. For example, such activities might include (i) an active review of the annual program plan during its development, (ii) the review of projects proposed for funding under sections 306 and 309, (iii) the evaluation of projects funded under the authority of section 309 of the Act, and (iv) service agency coordination.

(2) Allowable costs. Costs incurred by State advisory council members to perform services for the State adult education program must be classified as a cost of administration. The State educational agency may choose to pay all or some portion of these costs from State and local revenues. However, if Federal funds are to be used for this purpose, such costs must be paid from the 5 percent allowance for the cost of administration.

UNIT I

State Advisory Councils on Adult Education

The purpose of this survey was to obtain a summary of the status of state advisory councils on adult education.

Telephone or personal interviews were conducted with U.S. Office of Education's Regional Program Officers and with the state director of adult education or staff members in 50 states and Puerto Rico. Other possessions and territories were surveyed by mail.

The telephone interviews were based on a questionnaire but, in order to keep the respondent responding freely about the situation in his state, the questionnaire pattern was not followed rigidly.

Also, in order to keep the discussion from becoming inhibited, respondents were not pushed to make specific value judgements.

Therefore, the reader should be warned that the narrative for each state may contain subjective impressions of the interviewer based on subjective impressions of the interviewed.

The interviewer attended the meetings of three advisory councils and of the executive committee of another. He had firsthand reports on two other meetings from National Advisory Council member Charles Puksta and Executive Director Gary Eyre.

Some conclusions:

- There are few effective "full service" state advisory councils.
- There is not in existence a state counterpart of NACAE. Only one state council plans to meet federal criteria and use federal funds.
- The state advisory council amendments and the resulting OE regulations are counter productive. States seem to want freedom to relate membership selection to what they perceive as special conditions, and find funding a council out of the 5% administrative allotment to be impractical. Few states have immediate plans for a state council meeting OE requirements.

- The suggestion that additional funds be taken from 309 funds for administration occurred several times. It was indicated that this might encourage the formation of state councils.

- There was no expressed enthusiasm for councils mandated by the federal government. It was argued by some that the cost of these would reduce program funds.

- There were some indications that there might be more state advisory councils under the federal program if the requirement of appointment by a Governor or an elected state board were eliminated.

- A separate appropriation for optional councils was seen as a case of extra funds for one year. The suspicion was that after this the state council funds would in fact come out of program money.

- States which had no advisory councils and had no desires to form one still found the National Council helpful.

- The main thrust of most existing councils concerns program planning and ABE operations. Lobbying and public relation activities are infrequent.

- Public and student representation is weak on most councils.

- 1202 Commission Councils are rarely concerned with what state directors see as their adult learning responsibilities.

- Larger adult education concepts such as lifetime learning rarely come before most state adult education councils.

- Existing state councils that are not completely dormant are regarded by state directors as useful.

SUMMARY OF STATE ADVISORY COUNCIL STATUS

State	Advisory Body	Authorization and/or Appointment Authority	Has Written Rules, Records, Operation Policy	Public is Represented*
ALABAMA	State Advisory Committee on Adult Education	State Board of Education	YES	YES
	COMMENT: This Committee is credited with achieving an increase in state appropriations for ABE.			
ALASKA	Adult and Vocational Education Advisory Council	State Board	YES	YES
	COMMENT: ABE personnel feel they are strongly represented on this Council. There is no plan for a separate adult education council.			
ARIZONA	—	—	—	—
	COMMENT: Has no plans to form a state council.			
ARKANSAS	Adult Education Advisory Council	State Education Department	YES	YES
	COMMENT: This is a state funded group. It has a very broad membership.			
CALIFORNIA	—	—	—	—
	COMMENT: Many school districts have advisory councils. There is an effort to eliminate or combine state-wide commissions and councils.

*Has a member who is not a government official

SUMMARY OF STATE ADVISORY COUNCIL STATUS

State	Advisory Body	Authorization and/or Appointment Authority	Has Written Rules, Records, Operation Policy	Public is Represented*
COLORADO	—	—	—	—
	COMMENT: Colorado does not receive state funds for administrative purposes and was forced to end operation of a developing state advisory council when regulations limited federal support of councils to administrative funds. A voluntary group is seeking recognition from the three state education boards as the state's advisory group on adult learning.			
CONNECTICUT	The Connecticut Consulting Committee for Continuing Education	State Department of Education	YES	YES
	COMMENT: This group conducts an energetic legislative and public relations program.			
DELAWARE	Advisory Committee on Adult Education	Recommended by ABE division Approved by State Superintendent	—	—
	COMMENT: Has not met in a year. The last appointment was made in 1969.			
FLORIDA	General Adult Education Advisory Committee	Superintendent	YES	NO
	COMMENT: The state may broaden representation on its council but has no plans to meet federal criteria. It now consists of adult education administrators.			

---

*Has a member who is not a government official

SUMMARY OF STATE ADVISORY COUNCIL STATUS

State	Advisory Body	Authorization and/or Appointment Authority	Has Written Rules, Records, Operation Policy	Public is Represented*
GEORGIA	Adult Education Advisory Committee	State Board	YES	YES
	COMMENT: The state felt it could not afford to support an advisory council meeting federal criteria.			
HAWAII	State Advisory Council for Adult Education	State Board	YES	YES
	COMMENT: This group, mandated by state statute, has been in existence since 1946. Its primary function is to advise the State Board of Education on adult education matters.			
IDAHO	State Council of Program Administrators	State Superintendent	YES	NO
	COMMENT: Ten program administrators comprise this committee. They receive input from local advisory committees.			
ILLINOIS	Adult & Continuing Education Advisory Committee	Governor	YES	YES
	COMMENT: Will comply with the requirements of the Federal Rules and Regulations.			
INDIANA	–	–	–	–
	COMMENT: Committees are organized by the State Department of Public Instruction for special tasks involving ABE programs.

SUMMARY OF STATE ADVISORY COUNCIL STATUS

State	Advisory Body	Authorization and/or Appointment Authority	Has Written Rules, Records, Operation Policy	Public is Represented*
IOWA	The State Advisory Council for Adult Education in Iowa	State Superintendent	YES	YES
	COMMENT: It is broadly representative, meets regularly, and looks at adult learning from a broad perspective.			
KANSAS	Kansas State Advisory Council on Adult Education	State Board	YES	YES
	COMMENT: The Kansas plan for FY-76 contains the only proposal for that year for a state advisory council that would meet federal requirements.			
KENTUCKY	State Advisory Council for Vocational Education	State Board	YES	YES
	COMMENT: Kentucky has no plans for a separate adult education council.			
LOUISIANA	Advisory Council for Adult Education	State Board	YES	YES
	COMMENT: The new council is to be appointed.			
MAINE	—	—	—	—
	COMMENT: This state's advisory council was ended two years ago. There are task forces for special projects. This is regarded as effective and there is no plan to change.			

---

96

State Profiles

ALABAMA

The Alabama State Advisory Committee on Adult Education is appointed by the State Board of Education and has a broad membership of educators, business people and students. The State Director finds it useful and credits it with helping to obtain increased funding. The group concerns itself with all aspects of the federal program.

ALASKA

In Alaska, adult education is overseen by the Adult and Vocational Education Advisory Council. Adult educators feel this statutory vocational education council, now headed by the Anchorage ABE director, will devote more time to adult education than in the past. Alaska has no plans to organize a separate council under the ABE amendments because of the federal criteria and the need to spend all of its small administrative allocation on administration.

ARIZONA

This state has no advisory council and no plans to form one. Cost is a factor. The state director of ABE pointed out that the basic expense of meeting federal criteria is about as large for a small population state as for a large population state.

ARKANSAS

The Adult Education Advisory Council of Arkansas has 28 members from six ABE geographical districts. It deals with funding as well as programs and includes students among its members. Its membership categories also include local school superintendents, legislators, mayors and business executives. The ABE state director considers it effective and helpful to the program. It has written guidelines.

CALIFORNIA

There is no state-wide adult education advisory council in California although many districts have such groups. There is an effort to eliminate or combine a large number of state commissions and boards.

COLORADO

The State had an advisory council which operated under federal funds but terminated its activities because of the requirement that council funds come from the administrative allocations and other problems with federal regulations. Colorado's ABE is financed by federal and local funds without any state contribution.

A group calling itself the Keystone Adult Education Committee has won recognition from one of the state's three education boards and is seeking recognition from the others as each board's advisory group on adult learning. If all three boards approve the group, it hopes to get financial help from the state in FY-77.

This group grew out of a future inventions workshop conducted by the Future of Adult Education Project of the Education Policy Research Center of the Syracuse University Research Corporation.

CONNECTICUT

The Connecticut Consulting Committee for Continuing Education appears to be one of the exemplary state-operated groups. It is active in public relations and lobbying. Its legislative committee is composed of people who are not education officials.

DELAWARE

Delaware's council is inactive. The council was appointed by the State Superintendent. Delaware has an unusually large number of advisory groups and the state administration is attempting to reduce their number.

FLORIDA

Florida has a General Adult Education Advisory Committee, organized by the Adult and Vocational Education Division and appointed by the State Superintendent. It may be broadened to be more representative but there are no plans to meet federal criteria, which are felt to be too expensive.

GEORGIA

Georgia organized a state-operated advisory council in FY-76. It is appointed by the State Board of Education. The cost of meeting federal criteria was considered too high.

HAWAII

The Hawaii State Advisory Council for Adult Education is mandated by state statute and has broad responsibilities. Appointed by the State Board of Education, it has 15 or more members and meets quarterly. Industry, labor, civic organizations and education are represented. Each county has at least one member. A printed booklet describes the functions of the council.

IDAHO

Idaho has a state council that consists of 10 program administrators who get input from advisory committees of area programs. It will not change to meet federal criteria. The state requires that each local program be reviewed by a local advisory committee.

ILLINOIS

This summer the Governor signed an amendment to Illinois statutes which replaced a dormant advisory council consisting mainly of ex officio members with an Adult and Continuing Education Advisory Committee of 15 members to be appointed by the Governor. It is expected to meet federal criteria for state advisory councils.

INDIANA

Indiana does not have a state advisory council. Ad hoc groups are formed by the State Department of Public Instruction for special tasks involving the federal ABE program.

IOWA

Iowa's State Advisory Council for Adult Education consists of 15 members appointed by the State Superintendent of Public Instruction. It is composed of representatives of: Local and area school administration, minority groups, higher education, business and industry, clergy, labor, school-related groups and the general lay public. For FY-76 it has been assigned $3,000 from state funds.

There is close cooperation between the Iowa Council and NACAE, partly because the Iowa Chairperson, Mary Grefe, is a member of NACAE.

The Iowa Department of Public Instruction distributes a booklet about the Council and provides its members with letterheads, steps to make the Council visible.

A meeting attended by NACAE consisted of a day and half of busy sessions, with students and teachers of adults appearing to discuss their problems with the Council.

The Council has these written objectives:

1. To assist the adult education staff of the State Department of Public Instruction in developing a positive image of adult education as related to all aspects of the adult population of our state.

2. To advise the staff of the Department of Public Instruction on the needs and possibilities of adult education programs in the state.

3. To advise and assist the staff in cooperating with various agencies and interest groups in serving the needs of their particular organizations.

4. To encourage and direct the state staff to collect and disseminate information concerning adult education.

5. To advise and assist the adult education personnel of the state in the evaluation of programs.

6. To serve as a sounding board for the state adult education staff, regarding any proposed projects and/or programs.

At the meeting attended by NACAE, all of these objectives were discussed or acted upon.

KANSAS

The Kansas plan for FY-76 contains the only proposal for that year for a state advisory council that would meet federal requirements.

Its state plan for the council follows:

The State Board of Education shall appoint a State Advisory Council to serve as a liaison group to advise the Adult Education Section and the State Board of Education concerning adult education programs in Kansas.

The State Advisory Council shall be composed of the representatives from the following:

1. Elderly
2. Minority
3. Educationally Disadvantaged
4. Client or Consumer
5. Higher Education

6. Area Vocational-Technical Schools for Career Education
7. Practicing Adult Educator
8. Department of Corrections
9. Public Schools

Advise the State Board of Education with respect to studies for evaluating adult education programs, services, and activities assisted under the Act: and

Prepare and submit to the State Board of Education, the National Advisory Council on Adult Education, established pursuant to Section 311 of the Act, and the U.S. Commissioner of Education, an annual report of its recommendations, accompanied by such additional comments of the State Educational Agency as that agency deems appropriate.

The State Advisory Council shall obtain the services of such professional, technical and clerical personnel as necessary to carry out its functions.

Members of the State Advisory Council and its staff, while serving on the business of the council, may receive subsistence, travel allowances, and compensation in accordance with State law, regulations, and practices applicable to persons performing comparable duties and services.

Costs incurred by State Advisory Council established pursuant to Section 310A of the Act allowable expenditures of Federal funds granted to the States under Section 304 of the Act and of the non-Federal share of State and local funds necessary to earn such Federal funds.

KENTUCKY

The statutory Vocational Education Council serves as the adult education advisory group. There are no plans to form a separate council to meet federal criteria.

LOUISIANA

The Advisory Council for Adult Education in Louisiana is a 12-member body that includes student, business and civic representation.

MAINE

This state's advisory council was ended two years ago. There are task forces for special projects. This is regarded as effective and there is no plan to change.

MARYLAND

Maryland has a state Adult Education Advisory Committee, also regional and local committees. The committee meets at least four times a year.

MASSACHUSETTS

The Ad Hoc Advisory Committee on Adult and Continuing Education did not meet in 1974 or 1975.

MICHIGAN

The State Advisory Council for Adult and Continuing Education Services is part of a state advisory council system under which the State Superintendent of Education has departments submit programs and proposals to an advisory committee before they are submitted to him for action.

The council meets regularly, has broad representation, has active subcommittees, and concerns itself with broad issues.

It is state financed and staffed by the State Department of Education, Adult and Continuing Education Services. Travel expenses are paid on request.

The Council meets federal regulations on membership but there is no plan to seek federal certification. It is appointed by the State Board of Education.

Jurisdiction includes vocational education and community schools.

The Council does not lobby or deal with the general public, although it is involved with public issues as well as program and training problems

MINNESOTA

Minnesota does not have an adult education advisory body. Funding out of the 5% administrative set-aside was a major deterring factor in deciding against a council meeting federal criteria. Ad hoc advisory groups are formed by the state's adult education office to examine various aspects of adult learning in the state.

MISSISSIPPI

The Mississippi Adult Education Ad Hoc Advisory Committee is a group of 14 members, three professors of education and 11 adult education administrators. It is state financed and staffed, advises on programs and does informal evaluation.

MISSOURI

A council which had used federal funds for expenses was disbanded. The state feels it can not finance a council from its administrative funds.

MONTANA

The chief state school officer, who is elected, is not authorized under federal regulations to appoint a council. The governor has not elected to appoint a council.

NEBRASKA

Nebraska will use an ad hoc five-member review board appointed by the Commissioner of Education and approved by the State Board for advisory purposes in FY-1976. Members will represent the community colleges, higher education, the public school system and adult education clients. Formerly the Vocational Education Council had oversight on ABE programs.

NEVADA

Nevada has an Advisory Council for Manpower Training and Career Education. Its jurisdiction covers adult, vocational, and career education and other manpower activities. It has its own staff.

NEW HAMPSHIRE

The state has reorganized its advisory council, which is appointed by the State Board of Education. The new state plan does not provide for compliance with the federal requirement of gubernatorial appointment but does provide for broad representation in its membership, including students.

NEW JERSEY

The New Jersey State Advisory Council for Adult, Continuing and Community Education is a 21-member body that operates without state or federal funds. It has a well-balanced membership, holds public meetings and works closely with local advisory groups. Business executives play an active role. The Council publishes an annual report.

NEW MEXICO

The New Mexico Adult Basic Education Advisory Board consists of 6 members appointed by the State Board of Education. It consists of educators and public members. It is state financed and there is no plan to meet federal requirements. It is reported to have been effective in getting state ABE appropriations.

NEW YORK

New York terminated a limited adult education advisory group in 1974 and does not plan to consider a new one until organization changes have been worked out.

NORTH CAROLINA

North Carolina considered forming a council but decided it could not afford one.

NORTH DAKOTA

North Dakota has no council, nor plans to form one.

OHIO

Ohio let an existing council expire on December 31, 1974. It holds that federal regulations are too restrictive. Experts are used to advise on 309 Projects. They are appointed by the state superintendent.

OKLAHOMA

This state has had an Advisory Council for Adult Education since the start of the federal ABE program. It consists of 10 members appointed by the State Board of Education. It is financed by the State. There is no plan to comply with federal requirements.

OREGON

Oregon has had a State Adult Basic Education Advisory Committee since the inception of the federal Adult Basic Education program. It is an 11-member body appointed by the State Board of Education. It is now broadly representative and will meet federal membership criteria except appointment by the Governor.

It is linked with local advisory committees and moves its meetings around the state so it can look at local programs. Its members represent educational and allied interest institutions.

The Council is state staffed and funded as part of the four-state-dollars-to-one-federal-dollar ratio of ABE funding.

The Committee evaluates programs and proposals through subcommittees, holds public meetings, and makes an organized effort to meet the needs of adult learners. Its primary focus is on ABE.

The state director regards the advisory body as valuable. The members respond by giving a good deal of time to its service.

PENNSYLVANIA

Pennsylvania terminated its adult education council in 1975. The state is reducing the number of its advisory bodies.

RHODE ISLAND

Rhode Island has no adult education advisory council. The Commissioner of Education has named a group to study consolidation of existing advisory groups. Ad hoc advice is obtained on ABE staff development.

SOUTH CAROLINA

South Carolina has no formal advisory committee on adult education. An informal group composed largely of business and professional people has existed since federal ABE began. It meets twice a year. It is appointed by the State Superintendent.

SOUTH DAKOTA

South Dakota has had an advisory council since 1967. It is broadly representative, including a former student, minority representation, and a business man as well as educators and representatives of allied services. The name is being changed to State Strategy Board on Adult Education. Local councils are encouraged. The Council holds public hearings.

TENNESSEE

Tennessee has no advisory council but uses ad hoc groups for advice on teacher training programs and other activities.

TEXAS

The Advisory Council for Technical-Vocational Education is assigned general responsibilities under state law as the advisory council to the State Board of Education for vocational education, adult education, and manpower training. It has established an adult education committee and assigned staff to support that committee.

UTAH

There is no advisory council but advice is sought on an informal basis. The state hopes to strengthen local advisory participation before considering a state advisory council that would meet federal criteria.

VERMONT

The Vermont Adult Education Advisory Council of 17 members, appointed by the Governor, is being expanded to more than 20 members and expects to meet federal criteria. It probably will remain state-funded (out-of-pocket travel is major expense) but might use federal funds. As of now, all administrative costs are state funds.

The state Council has called attention to school districts and the state board to the fact that the law allows ABE students to be included in attendance figures that determine the amount of state aid, thus providing incentive for strong local ABE programs.

The Council plays a major role in the drafting of the state plan, which contains imaginative and effective graphics, (see attached pictograph showing how the state plan is put together).

In Vermont the Advisory Council plays a major role in the preparation of the state plan and in its implementation. Graphics are used in the state plan submitted to the Office of Education to clarify the interplay of resources utilized in the Vermont program. This pictograph comes from this year's Vermont program plan submitted to the Office of Education.

VIRGINIA

There is no state advisory council or plans to start one. There are some local advisory groups. The state does use ad hoc committees established to meet specific needs.

WASHINGTON

This state prefers its ad hoc committees, set up to meet specific needs, to a state advisory council and has no plans to form one.

WEST VIRGINIA

The Vocational Education Council has jurisdiction over adult education. There are no plans for federal certification of a new adult education council.

WISCONSIN

The state has no advisory council nor plans for one. It does get advice from ad hoc groups. Vocational, technical and adult education are under the jurisdiction of a state board with this as its only jurisdiction. Higher Education is the responsibility of the Board of Regents of the University of Wisconsin system, which includes the elected states superintendent and the President of the V.T.&A.E. Board. The Department of Public Instruction, responsible for elementary and secondary education, does not have responsibility for adult education.

WYOMING

Wyoming, which once had a separate Adult Education Council, now uses its Vocational Education Council for advice on adult education. A subcommittee of the vocational education group, with four members, handles ABE oversight. There are no plans to meet federal criteria.

AMERICAN SAMOA

America Samoa is replacing a temporary council with a new council to be recommended by the state ABE coordinator and appointed by the Governor. It will operate this year and meet federal criteria.

DISTRICT OF COLUMBIA

The Mayor's Advisory Council on Adult Literacy serves as the advisory council on adult education. It is an inter-agency body. The Adult Education Demonstration Center has an advisory council with public representatives.

GUAM

Guam is organizing a 10-member council to operate this year under federal standards.

PUERTO RICO

There is no advisory structure.

TRUST TERRITORY OF THE PACIFIC ISLANDS

The Trust Territory of the Pacific Islands plans to form an advisory council meeting federal standards for FY-76.

VIRGIN ISLANDS

The United States Virgin Islands is organizing a 9-member advisory council to operate this year. Seven members will come from the general public and two will be adult educators.

UNIT II

Advisory Councils Appointment Authority

The Federal statute provides that state adult education advisory councils which use Federal funds must be appointed by the Governor or by an elected board of education, including a board elected by the Legislature. When such a board exists, the law does not state whether its authority to appoint takes precedence over the Governor's authority or whether the board can appoint only if the authority is delegated by the Governor.

Most existing state advisory boards are appointed by state boards or chief state school officers or their subordinates.

It would seem that the appointive authority should be clarified. There are indications that the appointive power might be more likely to be used if it resided in state departments of education.

A table is attached which provides the latest information available for this survey on the method of selection of state education boards and chief state school officers.

METHOD OF SELECTING STATE SCHOOL OFFICIALS

State	Board of Education Designation	Method of Selection	Chief State School Officer Designation	Method of Selection
ALABAMA	State Board of Education	Partisan Election	Superintendent	Board Appointed

UNIT III

Federal Funding Provisions for State Councils

The provision that any federal funds for operation of federally certified state advisory councils on adult education must come from the administration allocation seems to discourage the formation of councils.

The 5% (actually 5 of 105 units, with adjustments for small states) was regarded by many respondents as too restrictive without a take-out for an advisory council.

It was pointed out by several respondents that travel and many other expenses would be as great for a large state with a small population as for New York or California.

Service to councils usually is absorbed in administrative overhead and many members of state councils do not seek reimbursement for travel expenses even when authorized.

A state table shows the amount of federal funds allocated to each state for vocational education and the additional amount allocated for the state vocational education advisory council. The same table shows the amount allocated to each state for adult basic education and the amount that can be taken out of this for administrative purposes. State adult education advisory councils can use federal funds only if they come from this administrative set-aside. Some states are allocated more for vocational education advisory councils than the entire amount allocated for ABE administration.

*These funds are taken from the total figure listed in the column to the left. Vocational Education Council allocations are in addition to the total state allotment of funds for program and research.

Footnotes

[1] Vocational education funds are allocated on a formula based on the percapita income of a state and the number of persons in three population groups age 15-19 is weighted at 50%; age 20-24 at 20% and age 25-65 is weighted at 15%. The remainder involves a complicated calculation with the figures cited.

[2] Vocational Education Advisory Councils are allocated 1% of the state allocation, in addition to that allocation. The Advisory Council gets not less than $50,000 or more than $150,000.

[3] Adult Basic Education federal grants to the states are allocated on the following formula.

Assistance Considerations:

Formula and Matching Requirements: From the sums available, the Commissioner allots not more than 1 percent among Guam, American Samoa, the Trust Territory of the Pacific Islands, and the Virgin Islands and $150,000 to each State, the District of Columbia and Puerto Rico. From the remainder of such sums he allots to each State, the District of Columbia and Puerto Rico an amount which bears the same ratio to such remainder as the number of adults, 16 years of age and over who do not have a certificate of graduation from a school providing secondary education (or its equivalent) and who are currently required to be enrolled in schools in such State bears to the number of such adults in all states. The matching requirement for each State is 10 percent non-Federal and 90 percent Federal, except that the federal share for the Trust Territory of the Pacific Islands is 100 percent.

[4] Administrative funds are limited to 5 percent of the total federal program grant, with a minimum of $35,000.

The regulations for administrative funds provide:

Eligible costs for administration of annual program plan. To the extent that they are reasonably necessary for and attributable to carrying out the annual program plan, the eligible administrative costs, at the discretion of the State educational agency, may include the following:

(1) Salaries of the professional and clerical staff, including

all amounts deducted or withheld as contributions to retirement, health, or other welfare benefit funds maintained for such staff. For employees of the State educational agency, the retirement fund contributions may be computed in conformity with State laws or regulations governing the State's share of such contribution;

(2) Fees and approved expenses of consultants, panel members, and other persons or groups acting in an advisory capacity (see Appendix B of GEPR);

(3) Expenses connected with committees, workshops, and conferences which relate to State administration;

(4) Travel expenses of staff and consultants are allowable in accordance with established appropriate State, local, or institutional travel regulations and limitations;

(5) Communications costs;

(6) Supplies, printing, and printed materials;

(7) Rental or, or, where economically justified, purchase or office and program equipment;

(8) Rental cost of space in a privately or publicly owned building is allowable (including the cots of utilities and custodial services) if; The cost does not exceed comparable rental on a square foot basis in the particular locality for the period of occupancy; the expenditure represents an actual cost; and like charges are made to other agencies occupying similar space for similar purposes;

(9) Maintenance and operation costs (such as utilities, insurance, security, janitorial services, elevator service, upkeep of grounds, normal repairs and alterations) are allowable to the extent they are not otherwise included in rental or other charges for space, and

(10) Costs incurred for rearrangements and alterations of facilities required specifically for the grant program or those that materially increased the value or useful life of the facilities are allowable when specifically approved by the grantor agency.

TITLE: ADULT FUNCTIONAL COMPETENCY: A SUMMARY.

DESCRIPTOR: *ADULTS; *FUNCTIONAL ILLITERACY; *PERFORMANCE SPECIFICATIONS; *DAILY LIVING SKILLS; NATIONAL SURVEYS; RESEARCH; ILLITERATE ADULTS; EDUCATIONALLY DISADVANTAGED; DISADVANTAGED GROUPS; EDUCATIONAL NEEDS; ADULT BASIC EDUCATION; *EDUCATIONAL ASSESSMENT

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 27P.

ABSTRACT: THE GOAL OF THIS PROJECT WAS TO SPECIFY THE COMPETENCIES WHICH ARE FUNCTIONAL TO THE ECONOMIC AND EDUCATIONAL SUCCESS OF THE ADULT POPULATION OF THE U.S. IN TODAY'S SOCIETY AND TO DEVELOP DEVICES FOR ASSESSING THOSE COMPETENCIES. FROM VARIOUS SOURCES OF INFORMATION INCLUDING LITERATURE REVIEWS, INTERVIEWS, AND SURVEYS, A TAXONOMY OF ADULT NEEDS WAS DEVELOPED IN THE FIVE GENERAL KNOWLEDGE AREAS OF CONSUMER ECONOMICS, OCCUPATIONAL KNOWLEDGE, COMMUNITY RESOURCES, HEALTH, AND GOVERNMENT AND LAW. PERFORMANCE REQUIREMENTS IN THE FORM OF OBJECTIVES WERE SPECIFIED AND PERFORMANCE INDICATORS WERE WRITTEN FOR EACH COMPETENCY. AFTER AN INITIAL FIELD TESTING, ADULT LEVELS OF PERFORMANCE OF A NATIONALLY REPRESENTATIVE SAMPLE WERE ASSESSED WITH REGARD TO THE OBJECTIVES. IT WAS FOUND THAT APPROXIMATELY ONE-FIFTH OF U.S. ADULTS ARE FUNCTIONING WITH DIFFICULTY. RESULTS OF THE SURVEY ARE PRESENTED BY PROPORTION OF POPULATION FOR EACH KNOWLEDGE AREA AND BY PROPORTION OF POPULATION FOR EACH MAJOR DEMOGRAPHIC GROUPING. THE IMPLICATIONS OF THE SURVEY RESULTS FOR ADULT BASIC EDUCATION ARE DISCUSSED, WITH ACTIVITIES OR PRODUCTS INDICATED AT FOUR OPERATIONAL LEVELS: THE CLASSROOM, THE LOCAL PROGRAM LEVEL, THE STATE LEVEL, AND THE NATIONAL LEVEL. ATTACHED IS THE ADULT PERFORMANCE LEVEL DESCRIPTION OF COMPETENCY, WITH GOAL STATEMENT, OBJECTIVES, AND TASKS. (AUTHOR/NJ)

I. OBJECTIVES

The ability to use skills and knowledge with the functional competence needed for meeting the requirements of adult living is often called "functional literacy," "survival literacy," or, occasionally, "coping skills." The central objectives of the Adult Performance Level (APL) project are to specify the competencies which are functional to economic and educational success in today's society and to develop devices for assessing those competencies of the adult population of the United States.

Although millions, perhaps billions, of dollars have been spent on educational research, practically all of that money has been in support of studies designed to either develop educational programs or products or to compare the effectiveness or efficiency of competing programs and products. Unfortunately, questions of effectiveness and efficiency are irrelevant if the objectives on which programs are based are not appropriate.

Attempts to use the tools of behavioral and operations research to specify the transcendent objectives of educational systems have been practically nonexistent. Researchers are much more adept at answering the question, "Which reading program is most effective?" than the more fundamental question, "Why is reading important?" The Adult Performance Level project activities occur in the latter arena.

II. A THEORY AND METHODOLOGY OF ADULT FUNCTIONAL COMPETENCY

The APL theory of functional competency was arrived at in the following manner. The staff focused on the first objective of the project which was to identify basic requirements for adult living. Rather than rely upon expert opinion, four simultaneous lines of research were pursued.

1. Review of related literature and research. A wide variety of behavioral and social research was reviewed in order to find a way to categorize the needs of the undereducated and underemployed adult. In addition to the traditional sources of information, the documentation of dozens of studies or projects which had so-called disadvantaged groups as their target was collected and reviewed. Data gathered by the National Assessment of Educational Progress project was also of great use.

2. An extensive survey of state and federal agencies and foundations was conducted in order to identify characteristics which distinguished the successful from the unsuccessful adult. The assumption was that a major source of knowledge of minimum performance criteria existed in the experiences, accumulated data, and reports of professionals who deal with the minimally performing adult. For example, interviews were conducted with 49 individuals from 25 different state and federal agencies during the initial phase. These persons provided literature, studies, data, and comments relevant to the objectives of the project.

3. A series of conferences on adult needs was conducted in different regions of the country. Adult educators, members of the private sector (e.g., supervisors and personnel managers), and members of different state and federal

4

agencies were brought together to review APL progress and to add their insights and information to the pool.

4. A continuing series of semi-structured interviews with undereducated and underemployed persons was begun in order to gather some first-hand data on their felt needs.

The result of these activities, which occupied much of the first year of the study, was a taxonomy of adult needs which finally came to be called "general knowledge areas." These general areas, which may be considered as the content of adult literacy, are now known as (1) consumer economics, (2) occupational (or occupationally-related) knowledge, (3) community resources, (4) health, and (5) government and law.

Having identified the general knowledge areas which seemed to be the most critical to adult performance related to the acquisition of literacy, data which had been obtained were then reanalyzed. This time, however, the concern was not with the content of literacy, but with the skills involved. Four primary skills seemed to account for the vast majority of requirements placed on adults. These skills were named (1) communication skills (reading, writing, speaking, and listening), (2) computation skills, (3) problem solving skills, and (4) interpersonal relations skills.

By this time it should be clear that the concern of the APL project is much more than the stereotypical notion of literacy. Because the term "literacy" popularly connotes a low level of functioning (e.g., the ability to read and write one's name) which may have nothing to do with functional competence, we have chosen to excise the word "literacy" from the rest of this exposition. Instead, we will consistently use the phrase "functional competency." This practice seems to be preferable to reeducating the whole world concerning the true meaning of literacy.

APL findings allowed for the construction of a general theory of adult functional competency which is summarized below:

1. Functional competency is a construct which is meaningful only in a specific societal context. A correlary of this thesis is that, just as functional competency is culture-bound, it is perhaps even more closely bound to the technological state of a particular society. The person who is functionally competent in one society may be incompetent in another. Furthermore, as technology changes, the requirements for competency change.

2. Functional competency does not consist just of a single skill or even a set of skills. Relevant to the skills and general knowledge areas identified by APL research, functional competency is two-dimensional; it is best described as the application of a set of skills to a set of general knowledge areas (see Figure 1 on following page) which results from the requirements imposed upon members of a society. The APL project used this approach as the basic framework for generating the essential elements or performance requirements of adult functional competency.

3. Adult competency is a function of both individual capabilities and societal requirements. To restate the thesis: A person is functionally competent only to the extent that he or she can meet the requirements which are extant

5

	CONSUMER ECONOMICS	OCCUPATIONAL KNOWLEDGE	HEALTH	COMMUNITY RESOURCES	GOVERNMENT & LAW
READING	Reading a newspaper grocery ad	Reading a newspaper help-wanted ad	Reading and interpreting a health insurance policy	Reading a movie schedule	Reading a pamphlet on an individual's rights after arrest
WRITING	Writing a grocery list				
SPEAKING, LISTENING	Listening to an advertisement on the radio		PERFORMANCE REQUIREMENTS		
COMPUTATION	Computing the unit price of a grocery item				
PROBLEM SOLVING	Determining the best stores in which to shop				

FIGURE 1. The APL Model of Functional Competency.

6

at a given point in time. If the requirements change and the individual does not adapt by either acquiring more or different knowledges and skills, then that person becomes less competent. Functional competence is a dynamic process, rather than a static state.

4. Functional competency is directly related in a mathematical sense to success in adult life. This is an operating assumption which underlies all APL research activities. However we define functional competency, we expect more competent adults to be more successful.

The APL project has drawn from a variety of educational, sociological, economic and behavioral studies to analyze different criteria of success. Based on this experience, an index of success is used which is a composite of (1) income, (2) level of education, and (3) occupational status. The assumption that competency is directly related to success implies that not only must the measure be derived from performances which are taken from the adult milieu, but that performance on such a measure must be positively correlated to success.

Once a general theory of functional competency had been developed and a taxonomy of associated adult performances created, the way was open for the evolution of the final APL methodology, which is summarized in the following diagram and discussion.

APL RESEARCH PROCESS

Direction of Work Flow

Methodology

1. Specification of competencies. From the sources of information identified previously, the performance requirements are aggregated into general requirement statements called "objectives." These objectives are keyed to the five APL general knowledge areas.

The set of objectives, taken as a whole, form the APL description of the behaviors which are important to adult competency. A copy of the latest APL objectives can be found at TAB A.

2. Development of performance indicators. Performance indicators are written for each competency. These are not "test items" in the traditional sense. Because they reflect requirements taken from adult life, they are small simulations of what is demanded of the adult by his or her society, and they require the adult to employ communication, problem-solving, and interpersonal relations skills in a variety of adult-related situations.

3. Field test and subsequent revision. Initial versions of the performance indicators were field tested with undereducated and underemployed adults. An initial round of field testing involving some 3,500 adults was conducted with the cooperation of Adult Basic Education programs in 30 states. Since that time, several thousand more adults have been tested in a number of states with subsequent versions of the performance indicators. Field testing and subsequent revision of performance indicators is a continuous, rather than one-time process, as indicated by the flow of activities in Figure 2.

Information gathered during the field test stage is used to respecify objectives and to improve the quality of performance indicators. These revised versions of both objectives and indicators are fed back to the original information sources for further revision and specification. The entire specification-field test-feedback-respecification process is cycled as many times as is necessary to reach consensus regarding a given objective, although typically three iterations are required. Each objective must also meet the empirical tests of non-triviality and of positive correlation to various indicators of success. (Those of you who are so inclined will recognize this method as a somewhat modified Delphi technique.)

4. National assessment of competency. The next step in the APL research process is to determine national levels of performance with regard to the objectives. Performance indicators are formatted into a series of interview schedules. With the assistance of a subcontractor (Opinion Research Corporation, Princeton, New Jersey) a representative sample of adults is drawn from the continental United States, excluding Alaska and Hawaii, and data are obtained from this sample. To date, five independent samples of the population have been drawn, each with a size of not less than 1,500, for a total of 7,500 adults. The overall precision of each sample is about 4% at the 95% confidence level for an item which breaks at the 50-50 level.

5. Determination of competency levels. The final stage of the process is to determine meaningful and well-defined competency levels from data gathered in the various national surveys. This determination is accomplished by (1) examining the performance of the population on an objective-by-objective basis, and (2) describing overall competency in terms of three levels based on an aggregate index (This aggregate index of functional competency is defined below.). In essence, the nationally representative survey data are used to develop "competency profiles" which are associated with different levels of adult success as measured by income, job status, and education. Three such levels have been chosen and are called simply APL 1, APL 2, and APL 3.

APL 1

(ADULTS WHO FUNCTION WITH DIFFICULTY)

APL 1's are those adults whose mastery of competency objectives is associated with:

1. Inadequate income of poverty level or less
2. Inadequate education of eight years of school or fewer
3. Unemployment or occupations of low job status

APL 2

(FUNCTIONAL ADULTS)

APL 2's are those adults whose mastery of competency objectives is associated with:

1. Income of more than poverty level but no discretionary income
2. Education of nine to eleven years of school
3. Occupations falling in medial job status range

APL 3

(PROFICIENT ADULTS)

APL 3's are those adults whose mastery of competency objectives is associated with:

1. High levels of income or varying amounts of discretionary income
2. High levels of education, high school completion or more
3. High levels of job status.

Notice that each of the three APL levels is a conjoint definition based on predicted income, education, and job status. Test data are used to "predict" an adult's success level, based on his functional competencies. Those persons classified as APL 1 are, by and large, "functionally incompetent" or adults who function with difficulty. APL 2's are competent, or adults functioning on a minimal level; and APL 3's are proficient in that their mastery of competency objectives is associated with the highest levels of income, job status and education.

Since the sample data are nationally representative, it is possible to estimate the proportion of the U.S. adult population which comprises each APL level. A discussion of these and other results follow.

9

III. HOW FUNCTIONALLY COMPETENT ARE U.S. ADULTS?

In general, the answer to the question posed by this section is "not as competent as we thought." Overall, approximately one-fifth of U.S. adults are functioning with difficulty. This estimate is based on a representative sample of adults performing on indicators which cover the five general knowledge areas and four skills.

The results of the APL national survey on functional competency will be presented as follows: (1) For each general knowledge area and skill area, the proportion of the population estimated to be in levels 1, 2, or 3 are reported; and (2) For each major demographic grouping, the proportion of the population estimated to be in levels 1, 2, or 3 are presented.

Competency levels by knowledge area and skills. The percentages of the adult population which are in APL levels 1, 2, or 3 as determined by performance on those indicators in the survey which measure knowledge and skills are presented in the following table:

Areas	APL Competency Levels		
	1	2	3
Occupational Knowledge	19.1	31.9	49.0
Consumer Economics	29.4	33.0	37.6
Government and Law	25.8	26.2	48.0
Health	21.3	30.3	48.3
Community Resources	22.6	26.0	51.4
Reading	21.7	32.2	46.1
Problem Solving	28.0	23.4	48.5
Computation	32.9	26.3	40.8
Writing	16.4	25.5	58.1
Overall Competency Levels	19.7	33.9	46.3

In terms of the general knowledge areas, the greatest area of difficulty appears to be Consumer Economics. Almost 30% of the population falls into the lowest level (APL 1), while one-third of the population is categorized as APL 2. Translated into population figures, some 34.7 million adult Americans function with difficulty and an additional 39 million are functional, (but not proficient) in coping with basic requirements that are related to Consumer Economics.

The highest proportion of proficient persons (most able to cope) is found in relation to Community Resources. Over half of the U.S. population falls into APL level 3. This is followed by Occupational Knowledge; again almost half of the population is estimated to be proficient in dealing with occupationally-related tasks. Although the least proportion of persons in comparison to all areas are in level 1 of Occupational Knowledge, this still indicates that about one of every five adults in the U.S. functions with difficulty or is unable to perform correctly on occupationally-related performance indicators.

A greater proportion of people is unable to perform basic computations than the other skills. Approximately one-third of the population, or 39 million adults, functions with difficulty, and a little over one-fourth, or 29.5 million adults, is functional but not proficient in task performance on items requiring mathematical manipulation. The area of greatest competency in comparison with other skills is in writing. However, even though almost three-fifths of the population performed adequately on tasks requiring writing skills, 16% of the adults in the U.S., or, some 18.9 million persons, are unable to cope successfully.

Competency levels by demographic groupings. The purpose for selecting certain demographic groupings and comparing the results within a group is to discover trends which might arise. As seen in the definitions given earlier for the three APL competency levels, "success" was an important variable in the study. In general, the three success indices (level of education, family income and job status) demonstrate a positive relationship with performance. The percent of the population estimated to be in APL levels 1, 2, and 3 for each reporting group of relevant demographic variables, as indicated by task performance, is presented in the following table:

Demographic Variables	APL Competency Levels		
	1	2	3
Education			
0-3 years	85%	10%	6%
4-5	84	16	0
6-7	49	37	14
8-11	18	55	27
High school completed	11	37	52
Some college	9	27	64
College graduate plus	2	17	80
Family Income			
under $5,000	40%	39%	21%
$5,000-$6,999	20	44	36
$7,000-$9,999	24	39	37
$10,000-$14,999	14	34	52
$15,000 plus	8	26	66
Job Status			
Unskilled	30%	38%	32%
Semi-skilled	29	42	29
Skilled	24	33	43
Clerical-Sales	8	38	54
Professional-Managerial	11	28	61
Age			
18-29	16%	35%	49%
30-39	11	29	60
40-49	19	32	49
50-59	28	37	35
60-65	35	40	24
Sex			
Male	17%	31%	52%
Female	23	35	42

Demographic Variables	APL Competency Levels 1	2	3
Ethnicity			
White	16%	34%	50%
Black	44	39	17
Spanish-surname	56	26	18
Other	26	41	33
Occupational Status			
Employed	15%	28%	57%
Unemployed	36	30	34
Housewives	27	38	35
Number in Household			
1 person	21%	23%	56%
2-3	20	35	45
4-5	19	31	50
6-7	21	33	46
8 plus	43	22	35
Region			
Northeast	16%	36%	48%
North Central	15	42	43
South	25	37	38
West	15	35	50
Metropolitan Areas			
1 million plus	21%	39%	40%
under 1 million	15	38	47
Suburb	21	32	47
Urban	14	29	57

In relation to the "success" variables, for level of education the percentage of APL 1's rises steadily from about 2% for college graduates to about 85% for adults with less than 4 years of formal schooling. For family income, the percentage of functionally incompetent persons rises from about 8% for incomes of $15,000 or greater to 40% for those under $5,000 a year income. For occupation of chief wage earner, the percentage of APL 1's rises from about 11% for the professional and managerial category to approximately 30% for the unskilled.

There is a generally negative relationship between age and performance. Although the youngest group (18-29) does not have the lowest level of functionally incompetent adults, still the general trend is that the older the individual, the more likely that he/she is incompetent. It appears that males and females perform about the same, although there are minor differences with males estimated to have a greater percentage of APL 3's than females. As for ethnic groups, it appears that there are great differences between Whites and all other minority groups. While 16% of the Whites are estimated to be functionally incompetent, about 44% of the Black and 56% of the Spanish-surname groups are estimated to be so. Here, as with other variables that have been discussed, the differences are probably due to the relatively lower levels of income, education, job status, and job opportunity found among minority groups in this country.

The employed show a smaller percentage of APL 1's (15%) than did housewives (27%) who, in turn, show a smaller percentage than did the unemployed (36%). Here, again, the differences in the "success" levels (i.e., amount of income, etc.) of especially the employed and unemployed may be used to explain the variations.

With regard to the number of people in the household, the only apparent difference in percentage of APL 1's occurred in households where more than 7 people lived. While for most household populations, the percentage of functional incompetents is about 20%, for the eight or greater group, the percentage rises to 43%.

The demographic comparison of regions of the U.S. indicates that while the Northeast, North Central and Western parts of the U.S. have about the same percentage of APL 1's, 2's, and 3's, the South has more APL 1's and less APL 3's. While all other regions of the country are estimated to have about 16% functionally incompetent adults, approximately 25% in the South are predicted to be APL 1's. Thus, a greater percentage of adults in the South appear to be in need of educational assistance than other parts of the country.

Rural areas have the greatest estimated percentage of APL 1's (27%) with cities over one million and suburbs slightly less (about 21%), and cities under one million and other urban areas having the least percentage of APL 1's.

IV. THE VALIDITY AND RELIABILITY OF APL

Validity

A strong case can be made for the validity of the APL objectives and the performance data which relate to them. Consider the following argument:

1. The objectives derive from inputs from the appropriate segments of society. These objectives, which form the APL description of adult functional competency, are the products of a research process which subjects each one to two critical tests: (1) Is the objective perceived as being important (valid) by undereducated and underemployed adults, employers, educators, and a number of other social service agencies who deal with "unsuccessful" adults? (2) Given that consensus among these groups is reached, is there evidence that mastery of a particular objective increases the probability of adult success, as indicated by income, education, and job status? Only if both questions are answered affirmatively is an objective considered to have been validated.

2. Great care was taken to construct performance indicators which were, within budgetary and time constraints, the best possible measures of the objectives. In addition to a technical review by consultants, performance indicators were also reviewed by the groups mentioned in 1. above, and were processed through several cycles of field testing and redesigning before being used on a national sample. The indicators are clearly not perfect in an absolute sense. It is impossible to obtain absolute consensus or to produce perfect correlation on any indicator. Nevertheless, there is good evidence that the APL performance indicators serve the purposes of the study very well.

3. Great care was also taken to design a national sample of adults and to exercise the proper control over field procedures in order to produce meaningful and precise results. As mentioned earlier, the sample design is straight forward, has a known precision, and is reproducible in the scientific sense. Sample design and field procedures were carried out according to specifications by an organization which has years of experience in drawing national samples and in conducting house-to-house surveys.

4. Perhaps the most important kind of "validity" is the acceptance and degree of use to which the objectives and test data will be put. Preliminary evidence indicates that, at least among the adult education community, there will be widespread acceptance and utilization. Already, several statewide efforts (notably Mississippi, Texas, and Alabama) are in progress to translate the objectives into relevant curriculum and staff development materials and methods.

Reliability

Although the term "reliability" is quite often used to refer to different constructs, "reliability" means temporal stability in the context of the APL project. That is, APL performance indicators are reliable to the extent that, assuming no major changes have taken place in either societal requirements or in the level of achievements of the general population, repeated measures produce identical results. Reliability is a function not only of the format and content of the interview itself, but of the sampling design and the field procedures. These features have just been discussed.

The traditional method of estimating reliability is repeated testing of a given sample. Coefficients of reliability calculated from total scores are used as decision variables for the estimation of reliability. No such coefficients are available at this time for APL measures, for two good reasons; (1) Reliability coefficients are based on total scores. Total scores are never calculated in the development of competency levels from APL data. (2) A test-retest design for a national sample would have cost at least $100,000. This was money which was better spent on development and validation of objectives.

There are, however, two valuable sources of information which are relevant to a discussion of the reliability of APL measures:

1. The fifth APL national survey consisted of a composite battery of items which had been used in previous surveys. Although changes were made in many of the items, some useful comparisons can be made on an item-by-item basis between results from earlier surveys and results on the final survey. Theoretically, if an item had not been changed at all, the estimates from two independent samples should differ only by the precision which each sample affords. For two independent samples of size 1,500, most items require a difference of 4% or more to indicate statistically significant differences (.05 level).

For the 39 items which were not changed between surveys, the mean absolute difference was 5.5% with most items having slightly higher p-values on the second sample than on the first. Although 5.5% is somewhat higher than the anticipated 4%, the reason for these results is quite clear. In order to minimize interview length (and maximize budgets), respondents in earlier surveys who failed to get a specified number of items correct during the initial portion of the interview were discontinued, under the assumption that most, if not all, of the remaining responses would be incorrect (items were arranged in order of difficulty). For the final survey, this criterion was omitted, so that every respondent completed all parts of the interview. The net effect was a desirable one--all respondents attempted practically every item. A side effect, however, was that p-values for easier items placed later in the interview tended to rise when compared with earlier results. Consequently, the overall difference between the samples is exaggerated. Most of that difference is due to a change in the criterion for completion, rather than factors relative to sample size, item format, or field procedure.

2. Another independent sample, drawn specifically for the State of Texas, using funds provided by the Texas Education Agency and the Governor's Office, was simultaneous with the final national survey. Although detailed results are too numerous to mention here, data from the Texas effort, which replicated the national one, are remarkably consistent with national trends. The relationship of test performance to variables such as income, education, occupational status, urbanicity, ethnicity, sex, age, and a number of other demographic variables is practically identical for Texas and the nation. Further, patterns of responses for the Texas sample are essentially identical to those of the national sample. Items with high p-values nationwide have high p-values in Texas, and those with low p-values nationwide have low p-values in Texas.

A final note of caution regarding the interpretation of APL results, particularly those dealing with the three levels of competency, must be sounded here. Those who are familiar with the APL objectives know very well that each one comprises a broad sector of human behavior. Clearly, it is fruitless to try to list and to measure all the behaviors which are embedded within a particular APL objective. Ultimately, one must operationalize the objective by selecting a set of behaviors as measures of that particular objective. All APL estimates of competency are based on such operational definitions, and their limitations must be kept in mind.

V. HOW DO WE MEET THE NEED?

The United States has been in a preeminent position of world power and influence for decades. Citizens of this country are justifiably proud of their country's accomplishments in industry, science, technology, the arts, and, perhaps most of all, in their system of universal free public education. Millions of mothers and fathers have intuitively subscribed to that tenet of the American dream which holds that education is the major avenue to success for their daughters and sons. Accordingly, Americans are, by many standards, the best educated and the most affluent people on earth.

Concomitant with this historical emphasis upon education and its benefits is the popular conception that "illiteracy" is a problem unique to the economically underdeveloped nations--the "Third World" countries. How could the United States, with its billions of dollars spent on education each year, have any significant literacy problem?

To be sure, we have been willing to commit a very small portion of our resources, private, state and federal, to literacy and related programs. The motivation behind this commitment is probably not due to a perception of a widespread need which is crucial to the well-being of our country. More likely, it is one of noblesse oblige. For the most part, ABE has been perceived as a peripheral enterprise with an extremely limited clientele. After all, if only a minute fraction of the population is "illiterate," there can be no justification for spending more than a minute fraction of the nation's resources toward eliminating the problem.

As long as "literacy" is conceived to be nothing more than the ability to read and write one's name, or to score at some low grade level on a standardized test developed for children, then the United States probably does not have a significant problem. On the other hand, if the concern is with the adult who does not possess those skills and knowledges which are requisite to adult competence, then the results of the APL research suggest that there is, indeed, a widespread discrepancy in our adult population between what is required of them and what they achieve. It is surprising, perhaps even shocking, to suggest that approximately one of five Americans is incompetent or functions with difficulty and that about half of the adult population is merely functional and not at all proficient in necessary skills and knowledges.

The rest of this section deals with other implications and possible methods of implementation or dissemination. Because the original focus of the APL project was the ABE system, more attention will be given to that enterprise than to other educational systems. There are, however, implications for elementary and secondary education, which will also be presented.

Implications for Adult and Adult Basic Education

Let us summarize the products of the APL project to date. Essentially, the APL project was given the charge of specifying those competencies which are functional to adult life, with the implication that these competencies would become the core of objectives for ABE. Specifically, the APL project has accomplished the following tasks:

1. Developed and validated a series of objectives which comprise adult functional competency.
2. Conducted a series of national assessments of performance of adults with respect to these objectives.
3. Created, as a by-product of the research, a prototype test of adult functional competency.

The discussion which follows describes some activities or products which are indicated for ABE at four operational levels: the classroom or instructional level, the local program level, the state level, and the federal or national level.

--- At the CLASSROOM LEVEL (Teacher-student)

1. Curricula based on APL objectives. Obviously, the APL objectives form the core around which ABE curricula may be constructed. The forms which these curricula might take could, and probably will, be quite varied in order to meet local requirements. As mentioned earlier, several major curricula development efforts are already underway.

16

2. Diagnostic, placement, and assessment devices. The APL study has built a solid research base for developing measures or overall student progress, pacing measures, such as curriculum-embedded tests, and devices used for placement or diagnosis.

--- At the LOCAL PROGRAM LEVEL (Local Program Director)

1. Guidelines for program objectives. Much curricula development work in ABE is conducted at this level. The APL objectives form a valuable set of guidelines for developing local curricula.

2. Local program effectiveness assessment. Because of the ambiguity regarding the instructional goals of ABE, local programs have traditionally had difficulty in documenting or measuring progress. Since the APL research has specified objectives and suggested ways of measuring behavior related to these objectives, an opportunity exists for local programs to meaningfully assess their effectiveness.

3. Staff Development. Any APL curriculum effort will require extensive training and development of local staff. For more details, see "Staff Development" under the State Level.

--- At the STATE LEVEL (State Director of ABE and other concerned State Officials)

1. State guidelines or foci for instructional objectives. Since education is properly a function of the state, the state department of education, in the form of the state director of adult education and his or her staff, has an opportunity to take the leadership in providing comprehensive programs dealing with basic education for adult life. With appropriate input from other state agencies, state-level officials can provide guidelines and direct resources to develop instructional programs which address the functional competencies identified by the APL project.

2. Statewide instructional effectiveness assessment. States have traditionally experienced difficulty in collecting evidence regarding the effectiveness of their programs. APL objectives and data can form a base upon which to meaningfully document statewide ABE program progress, as well as to provide a framework for reporting to the federal level.

Related to the function of assessing instructional effectiveness, is the possibility of conducting statewide competency assessments. Even though national levels of performance are known, APL surveys do not provide enough precision to describe a particular state. Since states are bound to differ with respect to performance on different APL objectives, conducting state assessments of adult competence could provide extremely valuable data for planning programs.

3. Staff Development. Preliminary experience with curricula designed around APL objectives indicates that teachers will require significant retraining in order to function effectively in providing basic education for adult life. Those efforts which are now underway utilize the teacher more as an instructional manager and resource person rather than in the traditional role of lecturer and imparter of knowledge. Furthermore, there are strong suggestions that future APL-based curricula will require fulltime, highly trained teachers. These requirements certainly have implications for staff development and for teacher certification, which are primary concerns of the state director.

--- At the NATIONAL LEVEL (OE)

1. National Dissemination of APL objectives. Although the Office of Education is clearly not in the business of setting national educational standards, there is nevertheless the opportunity to provide leadership which can come only from this level in disseminating the objectives as suggested foci for programs dealing with undereducated adults. The Office of Education, working with a variety of state agencies and other federal agencies, can have a major impact on educational practices at every level insuring that the results of the study and its implications for practice are well known throughout the educational and social service communities.

2. National Dissemination of APL Data. The Office of Education now has at its command a process which can meaningfully describe the level of competency of the adult population of the U.S. For reasons similar to those described above, the Office of Education has an opportunity to provide guidance, leadership, and assistance to states which it never had before. The ways in which this process can be used are numerous: Assessing the effectiveness of federally-funded programs, developing more useful reporting procedures, and maintaining a continuous assessment of national literacy levels over time are only a few of them.

Implications for Elementary and Secondary Education

The astute reader will have perceived by now that (assuming the research is any good) the implications of APL research are by no means confined to Adult or Adult Basic Education. If it is true that a significant proportion of Americans does not possess important skills and competencies, then it is patently wasteful of human and financial resources to wait until persons reach adulthood to begin to address those needs.

When one examines the APL objectives, it is interesting to compare the competencies described in the APL objectives to the curricular offerings typically found in elementary and secondary education. A brief examination will quickly reveal that, although many of them are indirectly addressed, not much of the typical school day is spent in focus on the objectives per se. This is not to indict the elementary and secondary systems--too much of that has occurred already. The findings do suggest, however, that to the extent that producing functionally competent adults is an important goal of elementary and secondary education, state and local education would do well to examine the functional competencies vis-a-vis their curricula and state requirements for high school completion.

Some states, notably Oregon, have already begun requiring students to complete a series of adult life-related performance tasks before awarding certification of high school completion. This is the kind of practice which seems to be entirely consonant with the APL findings.

To Summarize

Because of precedent and tradition, "literacy" is a static, low-level concept which is largely unrelated to the pragmatic requirements for adult life in this country. Using the term "functional competence," the APL project has developed a research process which has identified competencies which are important to success as adults. Using an assessment method which stems from viewing functional competence as a function of individual capabilities and societal requirements, the APL project has produced data which suggest that, contrary to popular

18

belief, many adults do not have the basic education for living which is indicated for even minimal levels of success. These results, and the objectives upon which they are based, can have profound implications for educational practice, and form a base of information and evidence which can be used to make different educational systems more responsive to the needs of both their clients and society.

A NOTE CONCERNING APL GOALS, OBJECTIVES, AND TASKS

Attached is the current version of the APL description of competency. This description is organized by general knowledge area. Within each general knowledge area, requirements are described in three successive levels of detail.

The first level is a goal statement, which is a broad description of capability which the functionally competent adult should possess for that particular general knowledge area.

The goal statement is defined by a series of intermediate-level requirements called objectives. The objective is the fundamental building block of the APL description of competency. Some degree of mastery of these objectives, the degree depending on the adult's individual milieu, is required for true functional competency.

Each objective, in turn, is described by a series of situation-specific requirements called tasks. Mastery of an objective is manifested by the individual adult's ability to perform a group of tasks -- to respond appropriately to specific situations which reflect the requirements of the objective. Since the tasks are currently undergoing a thorough revision, only the goals and objectives are included in this presentation.

The implications of this caveat concerning the APL tasks become especially important when one attempts to translate the APL description of competency into curriculum or other training programs for undereducated adults. When used for this purpose, tasks should be considered as paradigms or general guidelines. They should not be interpreted as being engraved in stone, because it is the objective that is the most important element in the requirements for functional competency.

APL

OBJECTIVES FOR FUNCTIONAL COMPETENCY

OCCUPATIONAL KNOWLEDGE

GOAL: TO DEVELOP A LEVEL OF OCCUPATIONAL KNOWLEDGE WHICH WILL ENABLE ADULTS TO SECURE EMPLOYMENT IN ACCORDANCE WITH THEIR INDIVIDUAL NEEDS AND INTERESTS.

1. OBJECTIVE: To build an oral and written vocabulary related to occupational knowledge.

2. OBJECTIVE: To identify sources of information (e.g., radio broadcasts, newspapers, etc.) which may lead to employment.

3. OBJECTIVE: To define occupational categories in terms of the education and job experience required, and to know minimum requirements of given occupations.

4. OBJECTIVE: To be aware of vocational testing and counseling methods which help prospective employees recognize job interests and qualifications.

5. OBJECTIVE: To understand the differences among commercial employment agencies, government employment agencies and private employers.

6. OBJECTIVE: To prepare for job applications and interviews.

7. OBJECTIVE: To know standards of behavior for various types of employment.

8. OBJECTIVE: To know attributes and skills which may lead to promotion.

9. OBJECTIVE: To know the financial and legal aspects of employment.

10. OBJECTIVE: To understand aspects of employment other than financial which would affect the individual's satisfaction with a job.

CONSUMER ECONOMICS

GOAL: TO MANAGE A FAMILY ECONOMY AND TO DEMONSTRATE AN AWARENESS OF SOUND PURCHASING PRINCIPLES.

1. OBJECTIVE: To build an oral and written consumer economics vocabulary. This should be an ongoing process through each objective.

2. OBJECTIVE: To be able to count and convert coins and currency, and to convert weights and measures using measurement tables and mathematical operations.

3. OBJECTIVE: To understand the concepts of sales tax and income tax.

4. OBJECTIVE: To be aware of the basic principles of money management, including knowing the basics of consumer decision-making.

5. OBJECTIVE: To use catalogs, consumer guides and other reference documents to select goods and services.

6. OBJECTIVE: To be aware of factors that affect costs of goods and services and to determine the most economical places to shop.

7. OBJECTIVE: To be aware of the principles of comparison shopping, and to be aware of the relationship of price to quality among brand names, and between "firsts" and "seconds" and to be able to substitute economy for quality according to individual needs.

8. OBJECTIVE: To know the various methods by which goods are packaged and to know which methods are most cost-effective in terms of quality and storage.

9. OBJECTIVE: To be able to take advantage of sales by knowing where to find them, by planning for their eventuality, and by being able to determine which are of worthwhile value to the individual.

10. OBJECTIVE: To be aware of advertising techniques and to recognize appropriate and inappropriate forms of selling and advertising.

11. OBJECTIVE: To know how to order food and to tip in a restaurant.

12. OBJECTIVE: To be aware of different stores where home furnishings can be purchased and to determine the best buys for essential and luxury items based on individual needs and resources.

13. OBJECTIVE: To determine housing needs and to know how to obtain housing and utilities based on those needs.

14. OBJECTIVE: To know how to buy and maintain a car economically.

15. OBJECTIVE: To know basic procedures for the care and upkeep of personal possessions (home, furniture, car, clothing, etc.) and to be able to use resources relating to such care.

16. OBJECTIVE: To know the various media of exchange and to be familiar with banking services in the community.

17. OBJECTIVE: To develop an understanding of credit systems.

18. OBJECTIVE: To collect information concerning the types of insurance available and to be able to select the best insurance for the individual and his family.

19. OBJECTIVE: To know the recourses available to the consumer in the face of misleading and/or fraudulent product/service claims or tactics.

20. OBJECTIVE: To understand the implication of consumption vis-a-vis finite world resources and to recognize that each individual's pattern of consumption influences the general welfare.

HEALTH

GOAL: TO INSURE GOOD MENTAL AND PHYSICAL HEALTH FOR THE INDIVIDUAL AND HIS FAMILY.

1. OBJECTIVE: To develop a working vocabulary related to health, especially as it relates to basic medical and physiological terminology, for accurate reporting of symptoms and following a doctor's directions in applying treatments.

2. OBJECTIVE: To understand how basic safety measures can prevent accidents and injuries and to recognize potential hazards, especially as such hazards relate to home and occupational safety.

3. OBJECTIVE: To know medical and health services in the community.

4. OBJECTIVE: To understand the physical and psychological influences of pregnancy as well as the need for proper prenatal care.

5. OBJECTIVE: To understand the importance of family planning, its physical psychological, financial and religious implications and to have knowledge of both effective and ineffective methods of birth control.

6. OBJECTIVE: To understand general child rearing practices and procedures for guarding the health and safety of a child and to apply proper action in

accordance with needs and resources.

7. OBJECTIVE: To understand the special health needs and concerns of the adolescent (and his parents) and to become acquainted with some ways to ease the transition from childhood to adulthood.

8. OBJECTIVE: To understand what contributes to good mental and physical health and to apply this understanding toward preventive care and health maintenance.

9. OBJECTIVE: To understand the interaction of self as a member of small groups (family, work, club, class) and to use this understanding to promote effective interpersonal coping skills.

10. OBJECTIVE: To be able to apply first aid in emergencies and to inform proper authorities of sudden illnesses, various accidents or natural disasters.

11. OBJECTIVE: To plan for health or medical insurance and to be aware of available financial assistance for medical or health problems.

12. OBJECTIVE: To understand what constitutes a proper diet and to plan meals according to individual needs and resources.

13. OBJECTIVE: To understand federal control of various drugs and items for health protection and to understand how public reaction influences this control.

GOVERNMENT AND LAW

GOAL: TO PROMOTE AN UNDERSTANDING OF SOCIETY THROUGH GOVERNMENT AND LAW AND TO BE AWARE OF GOVERNMENTAL FUNCTIONS, AGENCIES AND REGULATIONS WHICH DEFINE INDIVIDUAL RIGHTS AND OBLIGATIONS.

1. OBJECTIVE: To develop a working vocabulary related to government and law in order to understand their functions in society and in the personal life of the individual. This should be an ongoing process as each objective is covered.

2. OBJECTIVE: To develop an understanding of the structure and functioning of the federal government.

3. OBJECTIVE: To investigate the relationship between the individual citizen and the government.

4. OBJECTIVE: To understand the relationship between the individual and the legal system.

5. OBJECTIVE: To obtain a working knowledge of the various legal documents which the individual will need as a member of society.

6. OBJECTIVE: To explore the relationship between government services and the American tax system.

COMMUNITY RESOURCES

GOAL: TO UNDERSTAND THAT COMMUNITY RESOURCES, INCLUDING TRANSPORTATION SYSTEMS, ARE UTILIZED BY INDIVIDUALS IN SOCIETY IN ORDER TO OBTAIN A SATISFACTORY MODE OF LIVING.

1. OBJECTIVE: To build an oral and written vocabulary pertaining to community resources and to define community resources in terms of (a) services to community members and (b) services to persons outside the community or non self-supporting members of society (unemployed, criminals, insane, etc.)

2-3. OBJECTIVE: To know the types of community services provided for members of society including the purposes of and how to gain access to these services.

4. OBJECTIVE: To understand how and when to apply for community services, such as Social Security, and Medicare.

5. OBJECTIVE: To know various recreational services available in the community.

6. OBJECTIVE: To be able to utilize information services of the community.

7. OBJECTIVE: To be aware of the people and agencies in the community whose job it is to register and act upon citizen complaints.

SUBSET: TRANSPORTATION

8. OBJECTIVE: To build an oral and written vocabulary of transportation terms, including car insurance terms.

9. OBJECTIVE: To be able to recognize and utilize signs related to transportation needs.

10. OBJECTIVE: To develop a familiarity with transportation schedules, and to calculate fares.

11. OBJECTIVE: To be able to find and utilize information facilities.

12. OBJECTIVE: To learn the use of maps relating to travel needs.

13. OBJECTIVE: To recognize time zone boundaries and understand the concept of daylight saving time.

14. OBJECTIVE: To request information on and make verbal and written travel and overnight accommodations/reservations.

15. OBJECTIVE: To understand the relationship between transportation and public problems.

16. OBJECTIVE: To understand driving regulations, including safety, courtesy, and rules such as having a driver's license, car license plates, etc.

ACCESSION NUMBER: VT102925

TITLE: A SURVEY OF ADULT AND CONTINUING EDUCATION PROGRAMS IN NEVADA. FISCAL YEAR 1974-1975.

DESCRIPTOR: *ADULT EDUCATION; *ADULT EDUCATION PROGRAMS; *STATE SURVEYS; *STUDENT ENROLLMENT; VOCATIONAL EDUCATION; TABLES (DATA); POST SECONDARY EDUCATION; PROGRAM DESCRIPTIONS

IDENTIFIER: *NEVADA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 33P.

ABSTRACT: THIS SURVEY REPRESENTS REPORTED ENROLLMENTS IN ADULT EDUCATION AND CONTINUING EDUCATION PROGRAMS IN THE STATE OF NEVADA FOR FISCAL YEAR 1974-75. STATEWIDE ENROLLMENT IS REPORTED BY PROGRAM AREAS AND BY EDUCATIONAL AGENCY. THE PROGRAM AREAS ARE: ADULT BASIC EDUCATION, ADULT OCCUPATIONAL EDUCATION PROGRAM, OCCUPATIONAL POSTSECONDARY EDUCATION PROGRAMS, ADULT HIGH SCHOOL DIPLOMA PROGRAMS, COMMUNITY SERVICES PROGRAMS, COMPREHENSIVE EMPLOYMENT TRAINING ACT, AND CIVIL DEFENSE ADULT EDUCATION. IN ADDITION TO ENROLLMENT FIGURES, A BRIEF PROGRAM DESCRIPTION IS PROVIDED ALONG WITH A GENERAL STATEMENT OF PURPOSE FOR EACH OF THE PROGRAM AREAS. ENROLLMENT IN ADULT AND CONTINUING EDUCATION PROGRAMS IS ALSO REPORTED FOR 18 EDUCATIONAL AGENCIES IN THE STATE. TOTALS FOR EACH EDUCATIONAL AGENCY ARE BROKEN DOWN INTO THE ABOVE NAMED PROGRAM AREAS. (NJ)

INSTITUTION NAME: NEVADA STATE DEPT. OF EDUCATION, CARSON CITY. DIV. OF VOCATIONAL-TECHNICAL AND ADULT EDUCATION.

FORWORD

The Adult Education Survey has been a continuous service provided by the State Department of Education, Vocational-Technical and Adult Education Branch since 1954. This survey represents reported enrollments by educational agency and is entirely dependent upon the cooperation of these agencies involved in Adult and Continuing Education.

R. Courtney Riley
Director
Vocational-Technical and
Adult Education Branch

PROGRAM AREAS and STATEWIDE ENROLLMENT

ADULT BASIC EDUCATION

1. DESCRIPTION

The purpose of adult basic education is to expand educational opportunities and encourage the establishment of adult basic education programs that enable adults to continue their education to a level of completion of secondary school.

Adult basic education is a program of instruction for adults whose inability to read, write, speak and compute constitutes a substantial impairment to their ability to get or retain employment; education to improve adults ability to benefit from occupational training and otherwise increase their opportunity for more productive and profitable employment; education designed to help the adult learner acquire requisite skills for adult living.

2. ENROLLMENT IN PROGRAM

Educational Agency	Enrollment
Clark County Community College	1,012
Lincoln County School District	4
Lyon County School District	111
Nevada Highway Department	11
Nevada State Prison	62
Northern Nevada Community College - Elko	294
Western Nevada Community College	736
White Pine County School District	25
TOTAL	2,255

ADULT OCCUPATIONAL EDUCATION PROGRAM

1. DESCRIPTION

Adult occupational education programs involve classes that are specifically designed to enable adults to develop or upgrade their capabilities and/or skills to obtain, retain or advance in the occupational area of their choice. Examples of adult occupational programs are: auto mechanics, welding, shorthand, fire-science training, etc. These courses are usually 48 hours or less in time and do not require any pre-requisite courses.

2. ENROLLMENT IN PROGRAM

Educational Agency	Enrollment
Clark County Community College	1,806
Lincoln County School District	33
Lyon County School District	72
Nevada Highway Department	4,787
Nevada State Prison	113

University of Nevada - Reno	992
Washoe County School District	125
Western Nevada Community College	3,614
White Pine County School District	31
TOTAL	12,743

OCCUPATIONAL POST-SECONDARY EDUCATION PROGRAMS

1. DESCRIPTION

A program of instruction substantially designed to enable adults to pursue an associate degree or a vocational certificate. An example of occupational post-secondary programs leading to an associate degree are: police science, agriculture, radiologic technology, child care, etc. Vocational certificate programs are less than two years in length and do not require pre-requisite courses.

2. ENROLLMENT IN PROGRAM

Educational Agency	Enrollment
Clark County Community College	11,353
Northern Nevada Community College - Elko	663
University of Nevada - Las Vegas	511
University of Nevada - Reno	1,918
Western Nevada Community College	6,733
White Pine County School District	136
TOTAL	21,314

ADULT HIGH SCHOOL DIPLOMA PROGRAM

1. DESCRIPTION

Public school adult high school education programs are offered to provide the adult population (age 17 years and older) with a varied high school curriculum which they can attend in pursuit of meeting requirements for high school graduation. The State of Nevada provides financial assistance to public schools offering and enrolling adults in the high school program.

2. ENROLLMENT IN PROGRAM

Educational Agency	Enrollment
Churchill County School District	380
Clark County School District	3,405
Elko County School District	278

Nevada State Prison	118
Washoe County School District	1,701
White Pine County School District	26
TOTAL	5,991

COMMUNITY SERVICE PROGRAMS

1. DESCRIPTION

Community Service Adult Education programs provide for the community general non-credit educational experience (courses).

The courses offered in the community service area are widely varied and particularly responsive to the wants and needs of the people in the community. Examples of courses offered in the community service curriculum are: archery, stocks, bonds and investments, fly-tying, cake decorating, etc.

University of Nevada - Reno	2,555
Western Nevada Community College	2,150
White Pine County School District	135
TOTAL	14,214

COMPREHENSIVE EMPLOYMENT TRAINING ACT

1. DESCRIPTION

The purpose of comprehensive employment training is to train unemployed, underemployed and disadvantaged adults in academic and vocational skill areas.

Innovative programs have been developed to provide various segments to the labor force with the skills needed for employment; to prepare and upgrade present skills of individuals who are unemployed, underemployed or disadvantaged; to respond to changes in the labor market, thus improving the employment and earning prospects of people facing various disadvantages in the competition for available jobs.

Technical and academic training is offered to CETA trainees in some of the following areas: business and office occupations, culinary arts, electronics, medical occupations, automotive trades, crafts, and the service trades. In most instances, the trainees reach pre-apprentice level thus allowing them to enter the world-of-work with skills commensurate with job entry level requirements.

CIVIL DEFENSE ADULT EDUCATION PROGRAM

1. DESCRIPTION

Civil Defense Adult Education programs provide educational services that are designed to assist Civil Defense professionals, public officials, volunteers, and the general public in understanding Civil Defense methods, techniques, and responsibilities. Examples of courses offered in Civil Defense Adult Education are: Shelter Management, Radiological Monitoring, and Seminars for local Civil Defense Directors, etc.

TITLE: DUAL CAREERS: A LONGITUDINAL ANALYSIS OF THE LABOR MARKET EXPERIENCE OF WOMEN: VOLUME FOUR.

PERSONAL AUTHOR: PARNES, HERBERT S.; AND OTHERS

DESCRIPTOR: *LONGITUDINAL STUDIES; *FEMALES; *WORK EXPERIENCE; *WORKING WOMEN; *MIDDLE AGED; EMPLOYMENT PROBLEMS; EMPLOYMENT STATISTICS; TABLES (DATA); STATISTICAL ANALYSIS

IDENTIFIER: NATIONAL LONGITUDINAL SURVEYS; NLS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 337P.

ABSTRACT: THIS REPORT ON THE LABOR MARKET EXPERIENCE OF WOMEN IS BASED ON PERIODIC SURVEYS CONDUCTED FROM 1967-1975 OF A NATIONAL PROBABILITY SAMPLE OF WOMEN WHO WERE 30-44 YEARS OLD AT THE INCEPTION OF THE LONGITUDINAL STUDY. THE REPORT CONSISTS OF A SERIES OF RESEARCH PAPERS THAT ADDRESS ISSUES RELATING TO THE WORK BEHAVIOR AND EXPERIENCE OF WOMEN IN THE MIDDLE YEARS, SUCH AS LIFE CYCLE PATTERNS OF WORK FORCE PARTICIPATION, FACTORS IN CAREER ORIENTATION AND OCCUPATIONAL STATUS, INFLUENCE OF WORK EXPERIENCE AND TYPICALITY OF ASSIGNMENT ON EARNINGS, PATTERNS OF CHILD CARE UTILIZATION, THE ECONOMICS OF FAMILY MIGRATION, AND VOLUNTARY JOB CHANGING. AN INTRODUCTORY CHAPTER DESCRIBES THE DATA BASE, DISCUSSES SOME OF THE PROBLEMS INVOLVED IN DATA ANALYSIS AND INTERPRETATION, AND PRESENTS AN OVERVIEW OF CHANGES THAT HAVE OCCURRED IN THE ATTITUDES AND CIRCUMSTANCES OF WOMEN IN THE LAST FIVE YEARS. THE FINAL CHAPTER DRAWS TOGETHER THE PRINCIPLE FINDINGS AND DISCUSSES THEIR IMPLICATIONS. ALL OF THE PAPERS UTILIZE MULTIVARIATE STATISTICAL TECHNIQUES. APPENDED TO THE REPORT ARE SUPPLEMENTARY TABLES; A GLOSSARY OF TERMS; SAMPLING, ESTIMATING, AND INTERVIEWING PROCEDURES; AND INTERVIEW SCHEDULES. (NJ)

This report was prepared under a contract with the Employment and Training Administration, U.S. Department of Labor, under the authority of the Comprehensive Employment and Training Act. Researchers undertaking such projects under Government sponsorship are encouraged to express their own judgments. Interpretations or viewpoints stated in this document do not necessarily represent the official position or policy of the Department of Labor.

FOREWORD

For slightly more than a decade the Center for Human Resource Research of The Ohio State University and the U.S. Bureau of the Census, under separate contracts with the Employment and Training Administration of the U.S. Department of Labor, have been engaged in the National Longitudinal Surveys (NLS) of labor market experience. Four subsets of the United States civilian population are being studied: women who at the inception of the study were 30 to 44 years of age; men 45 to 59 years of age; and young men and young women between the ages of 14 and 24. These groups were chosen because each is confronted with special labor market problems that are challenging to policy makers: for the two groups of youth, high unemployment rates; for the older cohort of women, problems associated with re-entry into the labor force after children are in school or grown; and for the men, problems associated with skill obsolescence and age discrimination that may make re-employment difficult if jobs are lost.

For each of these four population groups, a national probability sample of the noninstitutional population was drawn by the Census Bureau in 1966, and interviews have been conducted periodically by Census enumerators utilizing schedules prepared by the Center for Human Resource Research. Originally planned to cover a five-year period, the surveys have been so successful and attrition so small that they have been continued beyond the originally planned expiration dates. As of the end of 1974, the older cohort of men had been interviewed in 1966, 1967, 1968 (mail), 1969, 1971, and 1973 (telephone); the older cohort of women in 1967, 1968 (mail), 1969, 1971, 1972, and 1974 (telephone); the young men annually between 1966 and 1971 and by telephone in 1973; and the young women annually between 1968 and 1973.

A substantial body of literature has already appeared based upon the NLS data. Fifteen volumes of comprehensive reports have been published on surveys conducted through 1970 (1971 in the case of the middle-aged men). These have appeared under the titles of The Pre-Retirement Years (middle-aged men: 4 volumes); Career Thresholds (young men: 5 volumes); Dual Careers (women: 3 volumes); and Years for Decision (young women: 3 volumes). In addition, about 100 reports on specific topics have been prepared by staff members of the Center for Human Resource Research and other researchers throughout the country who have acquired NLS public-use tapes.

The present volume is based upon the surveys of the older cohort of women through 1972. It differs from the previous volumes in the Dual Careers series in two major respects. First, it makes no attempt at a comprehensive coverage of all aspects of the data, but rather consists of a series of research papers on topics that are conceived to be important in understanding the labor market experience and status of women in their thirties and forties. Second, rather than relying exclusively on tabular analysis as have the previous volumes, all of the papers except the introductory one utilize multivariate statistical techniques.

Without attempting to escape their ultimate responsibility for whatever limitations their papers may have, the authors wish to acknowledge their debt to a large number of persons without whose contributions neither the overall study nor the present volume would have been possible. Although personally unknown to us, the several thousand members of the sample who have generously agreed to repeated interviews over the years must be mentioned first, for they have provided the raw materials for our effort.

Officials of the Employment and Training Administration have been continuously helpful to us in making suggestions for the design of the National Longitudinal Surveys and in carefully reviewing preliminary drafts of our reports. We wish to acknowledge especially the continuous support and encouragement of Howard Rosen, Director of the Office of Research and Development, and the valuable advise provided by Jacob Schiffman, Rose Weiner, and Ellen Sehgal, who have at various times over the years served as monitors of the project. Ms. Sehgal's comments on an earlier draft of the present volume were especially helpful, as were those of a number of other persons in the Department of Labor and other agencies who read portions of the manuscript at her request, including Emily Andrews, Robert Fairweather, Elizabeth Waldman, and Alice Yohalem.

The research staff of the Center for Human Resource Research has enjoyed the continuous expert and friendly collaboration of personnel of the Bureau of the Census, who have been responsible for developing the samples, conducting all of the interviews, coding and editing the data, and preparing the initial versions of the computer tapes. The names of those who have been involved in these activities over the years are too numerous to be mentioned individually, but we should like to acknowledge especially our debt to Earle Gerson, Chief of the Demographic Surveys Division and to his predecessors Daniel Levine and Robert Pearl; to Robert Mangold, Chief of the Longitudinal Surveys Branch; to Marie Argana, his immediate predecessor; and to their colleagues Dorothy Koger and Pat Healy. These are the individuals in the Census Bureau with whom we have had immediate contact in the recent past. In addition, we wish to express our appreciation to Kenneth Frail of the Field Division for directing the data collection; to David Lipscomb and Eleanor Brown and their staff of the Systems Division for editing and coding the interview schedules; and to Thomas Meerholz and Kenneth Kaplan for the preparation of the computer tapes.

The process of revising the computer tapes received from the Census Bureau and producing all of the tables and regressions incorporated in this volume was the responsibility of the Data Processing Unit of the Center for Human Resource Research under the able direction of Robert Shondel and his predecessor John Grasso. To Keith Stober, Production

Supervisor of the Unit, Gary Schoch, his predecessor, and their staff we express our thanks for serving so skillfully as intermediaries between us and the computer.

The authors profited from comments on earlier drafts of their work by their co-authors as well as by other members of the research staff of the Center, particularly John Grasso, Andrew Kohen, and Frank Mott. Finally, we are grateful to Ellen Mumma for her assistance in editing the volume, to Malcolm Rich for his editorial assistance and for the preparation of the Index, to Marc Parnes for the preparation of the charts that appear in Chapter I, and to Dortha Gilbert for the speed, accuracy, and good humor with which she typed the final version of the text and tables.

CHAPTER I

INTRODUCTION AND OVERVIEW

Carol L. Jusenius and Herbert S. Parnes*

During the past several decades, the proportion of married women working or seeking work outside the home has more than doubled--from 20 percent in 1947 to 43 percent in 1974. Accompanying this trend has been a dramatic change in the attitudes of American society concerning "appropriate" roles for women. At the end of World War II, the presence of women in the labor force was a source of social controversy; a majority of adult Americans did not approve of labor market activity by married women with children.[1] Today the employment of women outside the home tends to be more widely accepted, and the sharpest debates over women's status center on other issues: the need for child care facilities by working mothers; the extent of job satisfaction among women; the occupational and earnings distributions of women; and the effect of family composition on women's career development.

Topics such as these are the focus of the present volume--analyzed by means of a unique set of longitudinal data that record the work histories of a national sample of women in their thirties and forties from the time their formal schooling ended, and in considerable detail for the five-year period from 1967 to 1972. In addition to work-history information, the data include a rich variety of detail on the women's family backgrounds, their education and training, their health condition, their marital and child-bearing histories, a number of their work-related attitudes, and the current economic circumstances of their families. Thus, social and psychological as well as economic determinants and effects of labor market experience can be explored.

I PLAN OF THE VOLUME

The papers in this volume do not purport to analyze every important facet of women's labor market experience. Even less do they promise to exploit all of the data from the surveys on which they are based. Rather, each paper focuses on an aspect of women's labor market behavior or experience that is of particular interest to its author(s) and that has a significant bearing on the welfare of women in this age category.

---

*We are indebted to Randall H. King for his assistance in preparing the materials for the empirical portion of this chapter.

[1] Erskine (1971), p. 283.

Although all of the authors are members of the same research staff, neither in planning the volume nor in its execution has there been an attempt to force diverse interests into a common mold or to induce individual researchers to accept uncongenial conceptual frameworks or methods of analysis in order to serve some *a priori* sense of theoretical or methodological integrity. Hopefully, whatever may have been lost in the logic of organizational structure and in internal consistency has been compensated by the eclecticism that has resulted.

Chapter II utilizes both the abbreviated lifetime work histories of the women and the more detailed information relating to the period between 1967 and 1971 to analyze longitudinal patterns of female labor force participation. More specifically, current labor force status of various categories of women is related to the extent of their lifetime participation. Also, on the basis of comparisons of labor market status at three points in time--1967, 1969, and 1971--the relationship between entry and exit rates and changes in cross-sectional labor for participation rates is explored. Chapter III continues the analysis of the women's lifetime work histories by focusing on their career orientation and occupational status. The first portion of this chapter attempts to identify factors associated with a career orientation, defined as having been employed in the same or related occupations at least three-fourths of the time since leaving school. In the second portion multiple regression analysis is used to ascertain the determinants of educational attainment as of 1967 and of occupational status at several points in the lives of the respondents.

The remaining empirical chapters are based on the work experiences of the women during the five-year period covered by the surveys. Chapter IV analyzes the determinants of the average hourly earnings of women employed as wage and salary workers. Particular attention is focused on the relation between the skill level of a woman's job and the extent to which her wages are influenced by (1) human capital investments and (2) whether she is in a traditionally female occupation. Chapter V deals with two questions relating to the child care arrangements and needs of women with preschool children. The analysis begins with an assessment of the factors associated with the use of nonfamily means of child care. Then, among women not currently employed, it investigates the factors associated with the willingness to seek work if free day care centers were to be provided.

Chapters VI and VII relate to different aspects of the mobility of women. Geographic movement is the focus of the former. Two issues are investigated: the effect of a wife's employment on the probability of family migration; and the effect of migration on family earnings and, more particularly, the earnings of the wife. Chapter VII deals with interfirm movement and identifies the factors associated with a propensity to change employers as well as with the likelihood of actual voluntary job change between 1969 and 1971. This chapter also seeks to ascertain whether voluntary job changes result in improvements in earnings, job satisfaction, and employment stability. The final chapter draws together the principal findings of the volume and discusses their implications.

The remainder of this introductory chapter is divided into three sections. First, the nature of the data base is described. Next, there is a discussion of some of the issues involved in analyzing and interpreting the data. The final section presents an overview of changes that have occurred in the circumstances and attitudes of the women over the five-year period covered by the surveys.

II THE LONGITUDINAL DATA BASE

The Sample

The studies in this volume are based on data from the National Longitudinal Surveys.[2] The members of the sample who provided the information were selected to be representative of the almost 18 million women in the U.S. civilian noninstitutionalized population who in 1967 were between the ages of 30 and 44. The sample was drawn from 235 Primary Sampling Units (PSU's) by procedures analogous to those used in the Current Population Survey (CPS).[3] However, in order to provide sufficient numbers of observations for reliable racial comparisons, the sampling ratio for black women was between three and four times as high as that for white. Thus, the sample of 5,083 women originally interviewed in 1966 included 3,606 whites, 1,390 blacks, and 87 women of other races. The last-mentioned group has been eliminated for all of the analysis in this volume.

In addition to the difference in sampling weights between blacks and whites, there is also some variation within each color group. In part, this reflects a noninterview adjustment in weights that was made in the initial survey to account for members of the original sample who were not interviewed. It also reflects further adjustments in the weights to make the sample conform to the known distribution in 1967 of the United States' civilian population by residence, age, color, and sex. Although the tables

---

[2] These surveys have been designed by The Ohio State University Center for Human Resource Research under a contract with the Manpower Administration of the U.S. Department of Labor. The sample design, field work, and the initial stages of data processing are the responsibility of the U.S. Bureau of the Census under a separate contract with the Manpower Administration. In addition to the sample of women on which the data of this volume are based, the National Longitudinal Surveys include three other age-sex cohorts: men between the ages of 45 and 59 when they were first interviewed, young men between the ages of 14 and 24, and young women in the same age category. For a complete description of the surveys see Center for Human Resource Research (1975).

[3] For a detailed description of the sampling, interviewing, and estimating procedures, see Appendix C.

20

in the report show numbers of sample cases rather than population estimates, all calculations (percentage distributions, means, regressions) are based upon weighted observations.[4]

It is important to note that although the data collected in the 1967 survey are representative of the population of this age cohort of women in that year, the same is not true for the information collected in any subsequent year, for there has been no attempt to adjust the sampling weights to take account of attrition. Since the studies in this volume are for the most part restricted to respondents who were reinterviewed in 1972, it must be kept in mind that the sample on which the data are based is not necessarily representative of the civilian population of women 35 to 49 years of age in that year. Between the initial survey in 1967 and the 1972 survey, the sample shrank from 5,083 individuals to 4,471, an attrition rate of 12 percent. This shrinkage in the sample was not randomly distributed. For example, as is indicated by the data in Appendix Table 1A-1,[5] the 1972 sample tends to underrepresent childless women relative to married women with children living at home. There are also variations in attrition rates by region of residence. In most cases, however, differences in response rates among various categories of respondents are not substantial and are unlikely to have seriously biased any of the results that are reported in the studies.

The Surveys

Subsequent to the initial interview in 1967, respondents were reinterviewed in 1969, 1971, and 1972; an abbreviated mailed survey was conducted in 1968.[6] Each of the surveys was conducted by approximately 300 to 400 interviewers of the Field Division of the Bureau of the Census, utilizing schedules prepared by the Center for Human Resource Research.[7] Surveys generally extended over a two- to three-month period;[8] thus although the term "survey week" is used throughout the report to refer to the reference week (preceding the date of the interview), it should be borne in mind in interpreting the data that this is not the same week for all respondents.

---

[4] The sole exception is Appendix Table 1A-1, showing the noninterview rates in the 1972 survey.

[5] Tables cited in this chapter are all found in Appendix A.

[6] Although the National Longitudinal Surveys were originally intended to cover a five-year period, a decision was reached in 1973 to extend the surveys for an additional five years so long as the problem of attrition did not become unduly severe. The additional surveys were to be conducted biennially by telephone, ending with a face-to-face interview at the end of the ten-year period. The first telephone survey of the women was conducted in 1974. Of those eligible, 96 percent were interviewed.

[7] For the 1967 and 1972 interview schedules, see Appendix D.

[8] To balance the work load of the Census Bureau, the month in which interviewing began was changed during the course of the study. Prior to 1969 the interviewing process began in May; in 1969 and thereafter they began in April.

Nature of the Data

Stated succinctly, the data collected during the course of the National Longitudinal Surveys include an abbreviated lifetime work history of each respondent up to the time of the first survey, a detailed work history during the period covered by the surveys, and information about a variety of social, psychological, and economic characteristics of the respondents that are hypothesized to influence labor market behavior. No particular purpose would be served by attempting to catalog at this point the types of information that have been collected, but Appendix B consists of a glossary defining all of the variables used in this volume and describing how they are measured.

While detailed description is unnecessary, the analytical potential inherent in the longitudinal character of the data deserves emphasis. The fact that the data have been collected at several points in time over a five-year period makes it possible to examine the extent and character of change in important aspects of the labor market status of the women, and this in itself is a substantial contribution because such data are relatively uncommon. But much more important is the ability to relate an individual's characteristics at one point in time to her characteristics or status at a subsequent point and to examine changes in one set of characteristics in the light of changes in another set. This allows analysis of developmental processes and the exploration of directions of causation that can be accomplished in no other way.

Perhaps the clearest examples of the unique contributions that longitudinal analysis can make are provided by studies of relationships between attitudinal measures and actual behavior. For example, in the study of interfirm mobility in Chapter VII a respondent's satisfaction with her current job as measured in 1969 is related to the likelihood of her having changed employers between 1969 and 1971. The only way such an investigation could have been carried out on the basis of a single survey would have been by means of a retrospective measure of attitudes--clearly indefensible because of the possibility that a respondent might rationalize her 1969 attitude in the light of her actual subsequent behavior.

However, the benefits of longitudinal analysis are by no means confined to cases in which attitudinal variables are being examined. For example, the analysis in Chapter II rests heavily on an ability to compare a woman's labor force status at several points in time. Similarly, the analyses of geographic and interfirm mobility in Chapters VI and VII, respectively, take advantage of an ability to relate changes in job status and in residence to changes in earnings. Finally, in the analysis of vertical occupational mobility in Chapter III the longitudinal research design permits one to examine the impact of various types of experience during the five years covered by the study on the likelihood of movement up or down the occupational hierarchy.

22

III THE LIFE-CYCLE DECISION PROCESS

Most of the analysis in this volume is based on a very short period in the total life span of the women under consideration--the five years from 1967 to 1972. Many of the characteristics of the women that affected their labor market activity during this period were the product of decisions that had been made earlier--decisions, for example, relating to education, marriage, and fertility. By the same token, decisions and experiences during the five-year period under investigation will doubtless condition subsequent behavior. All of these decisions and experiences, moreover, have been influenced by the changing social milieu in which the women lived. To put all of this in perspective, it is desirable to say a few words about the personal and environmental factors that have operated to affect the working lives of the cohort of women with which this study is concerned.

Factors Affecting Life-Cycle Decisions

At any given stage of development, some characteristics of individuals may be treated as exogenous in explaining behavior. For example, educational attainment or marital status are largely "given" in analyzing the current labor force participation of a 40-year-old woman. In contrast over the life-cycle, all decisions and actions are endogenous. Educational attainment, marital status, number of children, and career choice are not parameters to be taken as given; they are variables to be explained, reflecting the outcome of earlier decisions and earlier circumstances. Moreover, decisions and plans at one point in time are subject to modification and reformulation. The birth of a first child, for example, may affect a woman's decision to bear additional children, as well as her decisions with respect to labor market activity. Thus, even if a woman develops long range plans during her teen-age years, such plans are by no means immutable. They may very well be revised several times over the woman's life span either in response to events and circumstances outside her control or as the result of changes in her attitudes and desires brought on by the process of maturation and aging.

The ways in which the aging process--with its typical cycle of entry into the labor force after leaving school, marriage, children, and re-entry into the labor force--may affect a woman's plans is fairly obvious.[9] Her age at marriage may influence the number of children she wishes to bear. Her age at the birth of her first child may affect her decision to have more children or to work outside the home. The birth or aging of her child(ren) may cause her to reassess her role within the family and thus to alter her plans for labor market activity.

It is also clear that events outside a woman's control which affect other family members may force a woman to reappraise her situation at any moment in time.[10] For example, at any stage of the life cycle, the sudden unemployment or incapacitation of a woman's husband may mandate her (re)entrance into the labor force, contrary to her previous plans. Equally important in causing reformulation of plans are changes in preferences that may occur as unexpected consequences of earlier decisions.[11] In other words, there are feedback mechanisms that may cause modifications in particular choices as their outcomes are experienced. For instance, a wife who enters the labor force only in order to reduce a debt incurred by the family may enjoy her work and as a consequence revise her original plans and continue her employment even after the financial obligation has been met.

---

[9] See, for example, Lopata (1972).

Finally, alterations in personal attitudes and preferences, and thus in plans, may result from changes in the broader social milieu. For example, women's plans regarding labor force participation and/or fertility may be modified as the result of social pressures to enter the labor force in order to contribute to a war effort, to leave the labor force in order to enhance employment opportunities for men, or to bear a greater (or lesser) number of children in the national interest. This factor is particularly important in understanding the work histories of the cohort of women under consideration in this volume. During their lives there have been dramatic changes in social attitudes toward women's role in the family and in the labor force. While still in their childbearing years, for example, most of the cohort have witnessed a shift in attitude toward large families, as concern for the population explosion made zero population growth a national issue. All have experienced the recent impact of the Women's Liberation Movement, with its implications for the status of women both in the home and in the labor market. These changes in social climate that the women have lived through necessitate an historical perspective in analyzing their labor market histories.

A Historical Backdrop

The four time lines in Chart 1.1 are designed to provide such a perspective. The top line indicates some major relevant events in American history over the 50-year period preceding the initial survey of our respondents. The remaining three show the age range of members of the cohort at the times of these events by focusing on the oldest (44), an intermediate age (37), and the youngest (age 30).

It is clear that the personal histories of the oldest group of women covered by this study were strongly linked to the economic and political events of the thirties and forties. They entered high school in the middle

of the Depression; they graduated as the United States entered World War II; and they helped produce the post-war "baby boom." The wide swings that occurred over this period in social attitudes toward the appropriate roles of women were a critical part of their lives. During their high school years, public opinion polls indicated that Americans strongly disapproved of married women working outside the home.[12] The low labor force participation rates of the thirties reflect this attitude: among women 14 years of age or older, 24 percent were in the labor force in 1930 and only 25 percent in 1940.[13] However, as women in this age group were leaving high school, the onset of World War II produced a drastic change in opinion on this issue as the needs of war industries mandated the entrance of women into the labor force.[14] Thus, although they had grown up at a time when society generally disapproved of married women working outside the home, by the time they were of marriageable age, social pressures were encouraging them to enter the labor force. Between 1940 and 1944 the labor force participation rate of married women (husband present) increased from 15 percent to 22 percent.[15]

However, this change appears to have been a reflection more of the special circumstances of a war-time economy than of a change in social norms. The conclusion of the war saw the restoration of the belief that women's primary role was in the home. In part, this was merely a continuation of the view held during the war, i.e., that the employment of women was a temporary phenomenon. However, the attitude was reinforced by a general concern that unemployment would again reach the level of the 1930's with the return of the veterans.[16]

Yet many women who had responded to the demands of the war by entering the labor force did not wish to leave their jobs, and the post-war labor force participation rates of women reflect this feeling.[17] While the participation rates in the late forties were below those of the war years, they nevertheless remained above the pre-war figures. In 1947, for example, the participation rate of married women (husband present) was 20 percent as compared with 22 percent in 1944 and 15 percent in 1940.[18] In 1950 labor force participation rates for married women aged 45 to 54 and 55 to 64 (the groups most likely to have older children) were twice their 1940 level.[19]

---

[12] Erskine (1971).

[13] Oppenheimer (1970), Table 1.1, p. 3. These figures are for black and white women combined. It should be noted, however, that the trends that are described in this and the several following paragraphs were quite different as between white and black women. In 1930 the proportion of women aged 14 and over who were gainfully employed was almost twice as high for blacks as for whites (42.5 versus 22.3 percent). In contrast to the experience of white women, participation rates of black women declined between 1930 and 1950. U.S. Department of Commerce (1943), Table 7, and (1960), Table 83.

[14] Whereas in 1936 only 15 percent of the population believed that it was acceptable for married women to work outside the home, by 1942, 60 percent of the American public favored the employment of women in war industries. Erskine (1971), 1936 Roper Poll on p. 282 and 1942 NORC Poll on p. 284.

[15] U.S. Department of Commerce (1974), Table 550, p. 340.

[16] Chafe (1972). See especially Chapter 8. Also see Mezerick (1945).

It is unclear whether this growth in the employment of women in combination with prosperous economic conditions influenced social attitudes, or whether the attitudes in combination with the prosperity caused the increase in women's labor market participation. Whatever the direction of causation, opinion polls indicated that a higher proportion of Americans in the late 1940's approved of married women working (if their children were grown) than in the pre-war period.[20] Nevertheless, the woman as full-time wife and mother remained the social norm, as well as the popularized ideal.

During the period immediately following the war, women in the intermediate age group (illustrated by the time line for those who were 37 years old in 1967) were graduating from high school. Their subsequent work histories, while undoubtedly influenced by their awareness as children of women's employment in war industries, were also likely to have been affected by the social conditions of the latter half of the 1940's. These women were making decisions regarding college, career, marriage, and children at a time when, as noted above, society was stressing the primacy of the role of "wife-mother" and accepting employment of women only if it did not interfere with the raising of children.

This attitude continued through the 1950's. The youngest group of women covered by this study (illustrated by the timeline for those who were 30 years old in 1967), were thus graduating from high school and becoming adults during a period in which society continued to emphasize women's position in the home. Nevertheless, increasing numbers of married women were seeking employment. Between 1950 and 1960 the labor force participation rate of married women (husband present) increased from 24 to 31 percent.[21] In other words, as these young women were formulating their marriage and career plans they were witnessing increasing labor market activity by older women,[22] and at the same time were reading women's magazines which stressed the importance of the roles women played in the home:

[21] U.S. Department of Commerce (1974), p. 340.

[22] Oppenheimer (1970), Table 1.4, p. 11.

> In 1958, and again in 1959, I went through issue after issue of the three major women's magazines . . . without finding a single heroine who had a career, a commitment to any work, art, profession or mission in the world, other than "Occupation: housewife."[23]

It was not until the 1960's that society began to appraise realistically the position of women inside and outside the family setting. Publication of Betty Friedan's The Feminine Mystique contributed to a growing awareness of the limited set of choices that had been available to women (especially those with a college education) during the 1950's.[24] In the 1960's, such books as Caroline Bird's Born Female raised a new set of issues about women's roles: their limited options within the labor force.[25] In the meantime, the full-time housewife was no longer the norm for all age groups of women: by 1967, 53 percent of women 20 to 24 years old, 48 percent of those 35 to 44, and 52 percent of those 45 to 54 were in the labor force. Even those in the principal childbearing years of 25 to 34 years of age had a labor force participation rate of 42 percent.[26]

Thus, by the time the initial survey reported in this volume was taken, the presence of women in the labor force--whether married or single, with or without children--was no longer a matter of great controversy. Instead greater emphasis was being placed on issues involving the employment conditions of those women in the labor force, e.g., topics such as those treated in subsequent chapters.

IV THE FIVE-YEAR PERIOD 1967-1972

With the foregoing historical context in mind, it is appropriate now to present an overview of the changes that occurred in the lives and labor market experiences of our sample of women over the five-year period that is the principal focus of this volume. The longitudinal data presented in this concluding section serve as a valuable backdrop against which to evaluate the more intensive analyses of aspects of the women's experience that are presented in the remaining chapters of the volume. We begin with an analysis of the changes that occurred over the five-year period in their

28

marital and family status, their health, and their attitudes toward market activity, and then turn our attention to a number of dimensions of their labor market activity and income.

Marital and Family Characteristics

Slightly under a tenth of the white respondents and somewhat under a fifth of the black changed their marital status between 1966 and 1972 (Table 1A-2).[27] The net effect of the gross changes that occurred was to reduce the proportions of married women living with their husbands from 87 to 84 percent for white women and from 66 to 60 for blacks. Among whites the number of divorced or separated women rose from 6 to 8 percent and the number of widows from 2 to 3 percent of the total. The proportion of black women in each of these categories in 1972 was exactly three times as high.

Of far greater quantitative importance in affecting the labor market activity of mothers over the half decade were the changes that occurred in the age distribution of their children living at home (Table 1A-3). Among women who were married and living with their husbands in both 1967 and 1972, the proportion with children under 18 years of age in the household declined from 86 to 75 percent for whites and from 76 to 68 percent for blacks. On the other hand, the decline in the proportion with children under six was much smaller--from 16 to 14 percent of the white women and from 18 to 16 percent of the blacks.

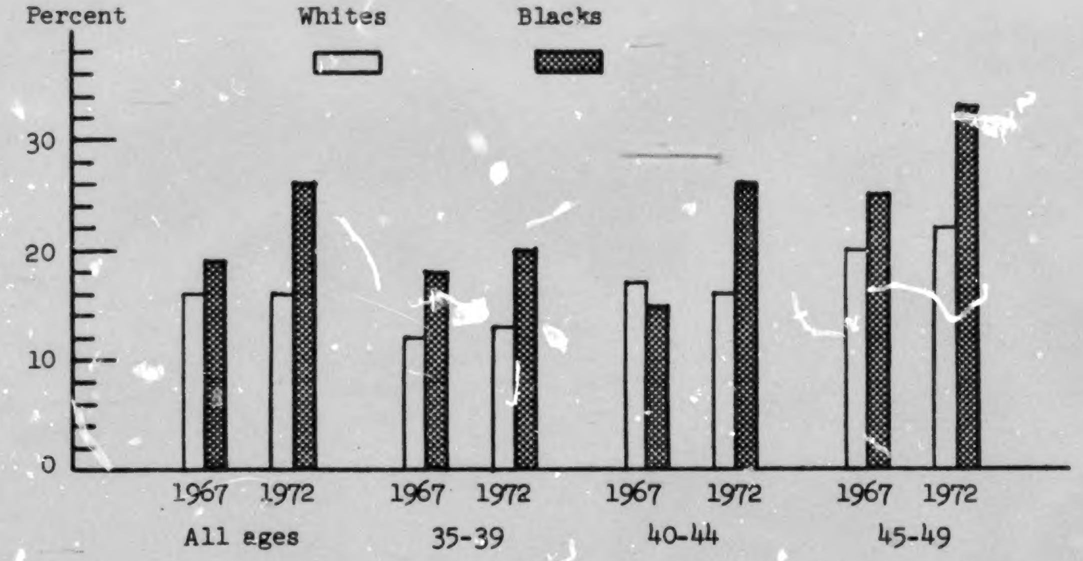
Health

A substantial minority of women in their thirties and forties have health problems that affect the amount or kind of work they can do (Chart 1.2). A fourth of the white women and a third of the black women reported such problems in 1967, in 1972, or in both years. Within both racial groups health problems are more pervasive among the older than among the younger members of the cohort. Nevertheless, among the total group of white women the incidence of work-limiting conditions was no greater in 1972 than in 1967, for 8 percent experienced a deterioration in health and an equal proportion reported an improvement. Among blacks, on the other hand, there was a net increase in the proportion of women who reported health problems--from 19 percent in 1967 to 26 percent in 1972. The proportion of women whose health deteriorated was related to age--being only 2 percentage points for those who in 1972 were in their late thirties, but 8 to 11 percentage points for those in their forties.

---

[27] Tables cited in this section appear in the Statistical Appendix. Unless otherwise indicated, all comparisons over two or more survey years are based on a universe restricted to respondents who provided the relevant information in both (all) years.

Chart 1.2 Percent of Respondents with Health Problems, by Race and 1971 Age: 1967 and 1972



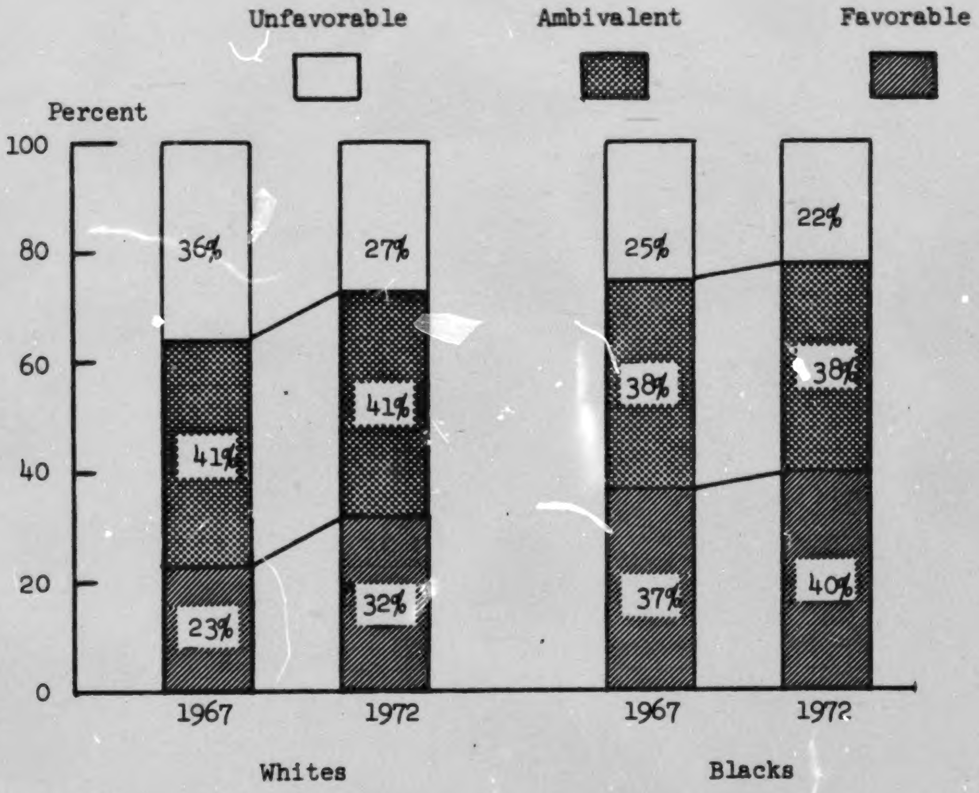
Source: Appendix Table 1A-4.

Attitude toward Market Work

The perceptible change during the five-year period in the attitudes of respondents toward the appropriate role of married women with children indicates a continuation of the longer-run trends previously noted. Respondents were asked an identical set of questions in both 1967 and 1972 designed to measure their views on the propriety of labor market activity by married women with school-age children (Chart 1.3). The proportion of white women with the most favorable views increased from 23 to 32 percent between 1967 and 1972, while those with the least favorable views decreased by an identical amount--from 36 to 27 percent. As compared with their white counterparts, black women in 1967 had expressed considerably more tolerant views of market work. While they, too, became somewhat more favorably disposed to such activity over the five-year period, the change in their case was much smaller. As a consequence, the racial difference in attitude on this issue was less pronounced in 1972 than in 1967.

There is also some evidence that respondents perceived their husbands to be somewhat more favorably disposed to their working in 1972 than in 1967 (Chart 1.4). In families whose wives were employed as wage and salary workers in both 1967 and 1972 there was only a very slight net change--a 2 percentage point increase in the case of both whites and blacks in the proportion of women who reported that their husbands liked the idea of

Chart 1.3 Attitude toward Market Work, by Race: 1967 and 1972



Source: Appendix Table 1.5.

their working. For white women who were out of the labor force in both years the evidence points to no strengthening of positive attitudes by husbands toward their work activity, but it does indicate some melting of opposition. There was a 9 percentage point decrease in the number who reported unfavorable attitudes by their husbands and a corresponding increase in the "undecided" category. No such pattern is discernible in the case of black women.

It is, incidentally, interesting to note that there is virtually no difference between the reported attitudes of the husbands of black and white working women. However, in the case of women not in the labor force, black women's husbands have perceptibly more favorable attitudes toward labor market activity by their wives than do husbands of white women, but the difference appears to be shrinking.

Labor Force and Employment Status

The following chapter examines in considerable detail the changes in labor force participation that occurred over the periods 1967 to 1969 and 1969 to 1971. Here we discuss briefly some of the trends over the full five-year period 1967 to 1972. In order to put them into perspective, it is instructive to examine 1967 and 1972 cross-sectional data from the Current Population Survey for women between the ages of 35 and 44.[28] The overall labor force participation rate for that age group increased approximately 4 percentage points--from 48 percent in 1967 to 52 percent in 1972. The trends were quite different, however, for blacks and whites. While the rate for the latter increased from 46 to 51 percent, the participation rate of black women remained virtually unchanged at about 61 percent. Thus, the differential between whites and blacks declined over the period from about 14 to 10 percentage points.

As compared with the foregoing cross-sectional data, the longitudinal data of the present study show a larger increase in labor force participation for the white women and a decrease for the black as the cohort aged over the five-year period (Chart 1.5). The white participation rate rose by about 9 points, while that for blacks dropped by 4 points. Thus, the 20-point black-white differential at the beginning of the period was reduced by almost two-thirds by 1972. The trend among whites is dominated by women with children. Among those who had never borne children the white labor force participation rate remained virtually stable over the period (Table 1A-8).

As judged by status in the terminal years, there was considerable stability in labor force status over the period (Table 1A-9). Among both whites and blacks about four-fifths of the women who were employed in 1967 were employed also in 1972. Moreover, about two-thirds of those who were out of the labor force in 1967 were also out in 1972. While employed women and those out of the labor force in 1967 were equally likely to be unemployed in the survey week of 1972 (2 percent), the corresponding likelihood for a woman who was unemployed in 1967 was four times as great.

The stability of labor force attachment is also manifested by data relating to the 12-month periods prior to the 1967 and 1972 surveys (Table 1A-10).[29] Of those women who spent no time at all in the labor force in the earlier period, three-fifths were also out of the labor force for the entire 12-month period prior to the 1972 survey. At the other extreme, of those who were in the labor force at least 50 weeks in 1966, over half were also full-year participants prior to the 1972 survey and

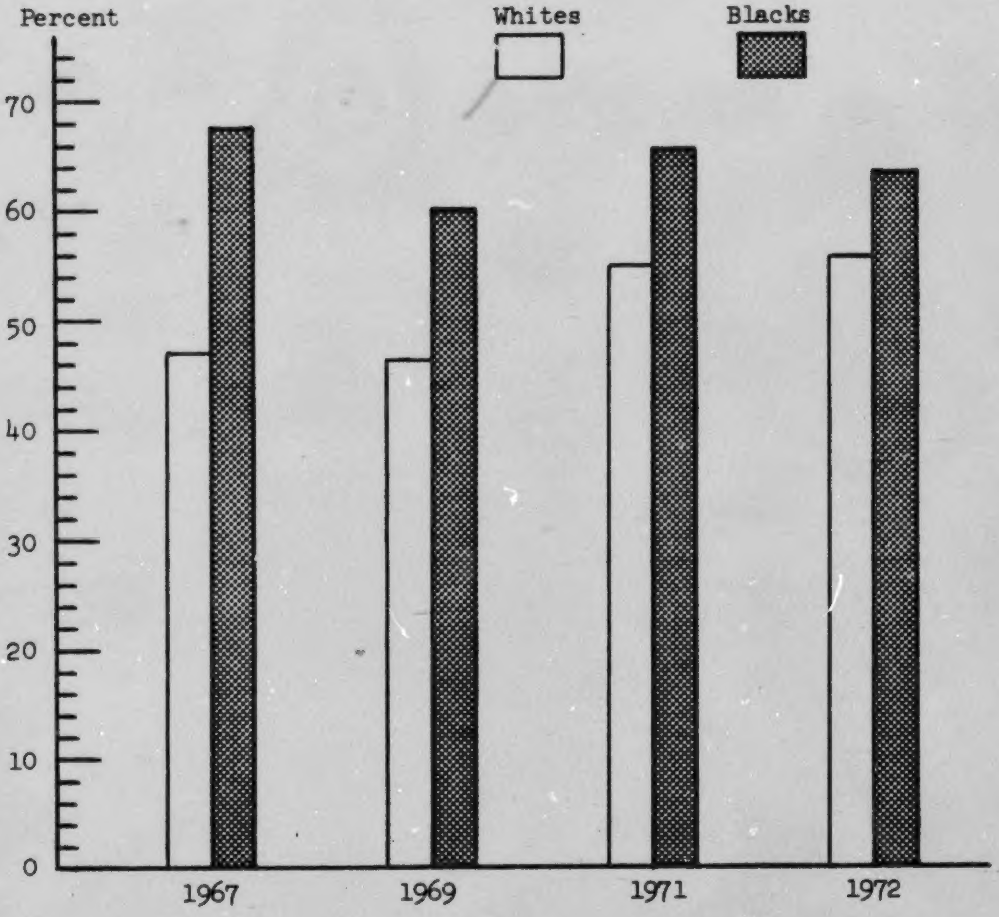
[28] U.S. Department of Labor (1975), p. 205.

[29] To be more accurate, the data for the earlier period relate to calendar year 1966.

Chart 1.5 Survey Week Labor Force Participation Rates, by Race: 1967 to 1972



Source: Appendix Table 1A-7.

as many as four-fifths were in for at least 40 weeks. The pattern was almost identical for whites and blacks.

Annual data for periods immediately preceding the 1967 and 1972 survey dates also make it clear that unemployment, far from being a random phenomenon, tends to be visited upon the same individuals from one year to another (Table 1A-11). While about nine out of ten women with some labor force exposure experienced no unemployment lasting as long as a week in calendar year 1966, the minority who experienced it were much more likely than others to have some unemployment in the year preceding the 1972 interview. Moreover, the greater the number of weeks unemployed in

1966, the greater the likelihood of unemployment and the longer its duration in the later year.

Retrospective Perception of Progress over the Five-Year Period

Before turning to an examination of changes during the half decade in several aspects of employment and income, it is of some interest to examine the respondents' perceptions of the course of their work lives over the five-year period. In the 1972 interview they were asked "All in all, so far as your work is concerned, would you say that you've progressed during the past five years, moved backward, or just about held your own?" The responses to this question are shown in Table 1A-12 for those respondents who were in the labor force in both the 1967 and 1972 survey weeks. It is impressive that only 4 percent of the women--an identical proportion of whites and blacks--believed that they had "moved backward" over the period. In contrast, three-fifths of the white women and half of the blacks reported that they had "progressed," while the remainder believed that they had "held their own." Although there were no age differences in the small proportions who reported retrogression, progress was somewhat more likely to be perceived by younger than older women.

Comparative Hours, 1967 and 1972

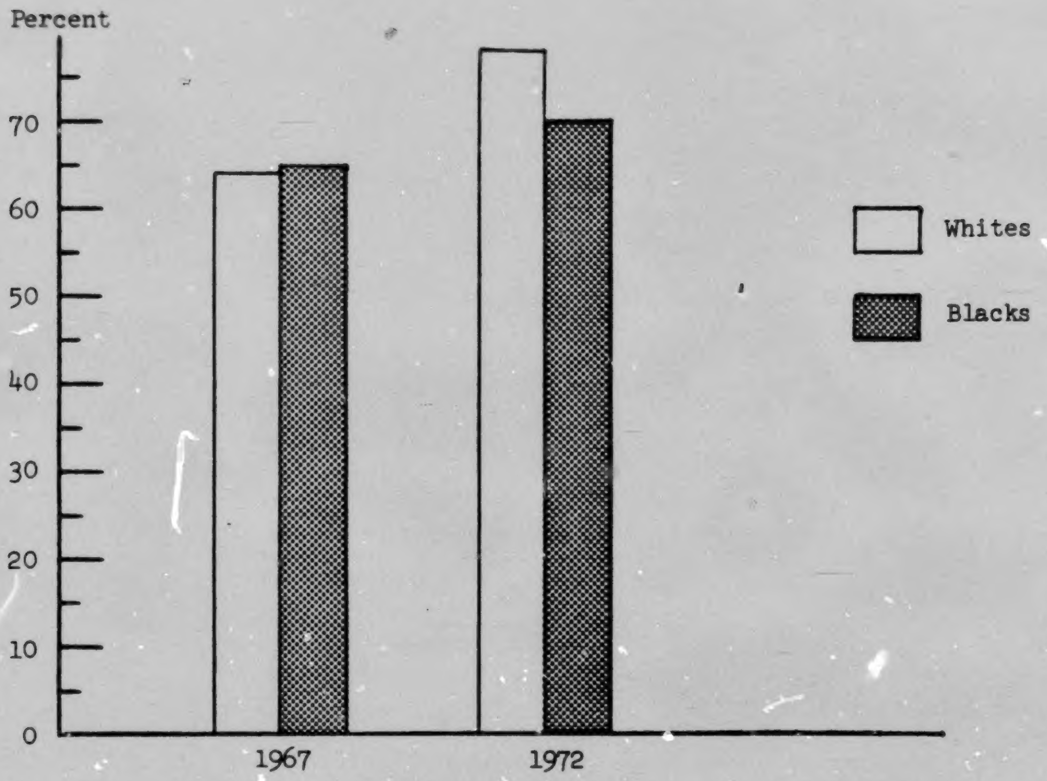
Among both white and black women the proportion of full-time employees among those who were employed as wage and salary workers at both dates was higher in 1972 than in 1967 (Chart 1.6). The increase was greater for the whites, among whom full-time employment rose from 64 to 78 percent of the total as compared with an increase from 65 to 70 percent for the blacks. As a consequence, while the proportions of full-time workers were virtually identical for the two races at the beginning of the five-year period, a differential of 8 points in favor of the white women had developed by 1972.

The Journey to Work

Means of travel Most white women in their thirties and forties who work as wage and salary earners get to work in their own automobiles (Table 1A-14). In 1972, for example, this proportion was as high as four-fifths, and there was very little difference between full-time and part-time workers in this respect. Public transport, on the other hand, is used by only about one in twenty of the white women. As might have been expected, black women are considerably less likely than white to drive to work, and in their case, there is a substantial difference between part-time and full-time workers. Overall, only about half of the black respondents reported driving to work in 1972, the proportions being 57 and 33 percent, respectively, for full-time and part-time employees. As compared with whites, blacks were almost four times as likely to use public transportation (18 versus 5 percent) and almost three times as likely to ride with someone else (16 versus 6 percent).

Between 1966 and 1972 there had been a perceptible increase in the use of private automobile--more pronounced for black women than white

Chart 1.6 Percent Full-Time Workers, by Race: 1967 and 1972



Source: Appendix Table 1A-13.

women and for full-time than for part-time workers. The overall proportion of white women using their own automobiles rose from 71 to 80 percent; for blacks the rise was from 41 to 52 percent.

Travel time Despite these changes in means of travel to work, women in our sample who worked at both dates spent about the same amount of time getting to work in 1972 as they had in 1967--over a quarter of an hour on average for white women and over 20 minutes for black (Table 1A-15). The greater travel time for blacks in both years, it should be noted, prevailed among both part-time and full-time workers and among both those using their own automobiles and those travelling by other means.

Only in the case of part-time workers was there a perceptible change in travel time between 1967 and 1972, which operated in different directions for whites and blacks. White part-time workers experienced an increase in travel time, while the opposite was true for blacks. These trends were

36

largely attributable to those using means of travel other than their own automobiles.

Real Average Hourly Earnings

Average hourly earnings of women in their thirties and forties who were employed as wage or salary workers rose faster than the price level between 1967 and 1972 (Chart 1.7). Adjusted for the increase in the Consumer Price Index, earnings of employed white women were 9 percent higher in 1972 than in 1967; for blacks the corresponding increase was 26 percent. Relative increases were greater over the 1967 to 1969 period than over the period from 1969 to 1971 (Table 1A-16). As the result of the larger relative increase in black earnings, the white-black earnings ratio shrank from 1.27 in 1967 to 1.10 in 1972.

When attention is confined to that subset of women who were employed in all four of the survey weeks (1967, 1969, 1971, 1972), the relative increase over the five-year period is about twice as high for white women as when all women employed in 1967 are compared with all those employed in 1972 (Chart 1.7). For blacks, on the other hand, the increase was no greater than for all women considered cross-sectionally. Nevertheless, the increase for blacks was greater than that for whites, so that the white-black earnings ratio for this subset of women shrank from 1.18 to 1.11. Another way of saying all of this is that although black women in this age group generally were improving their earnings position relative to white women over the period, the improvement was not so great among those who were continuously employed as among the total group.

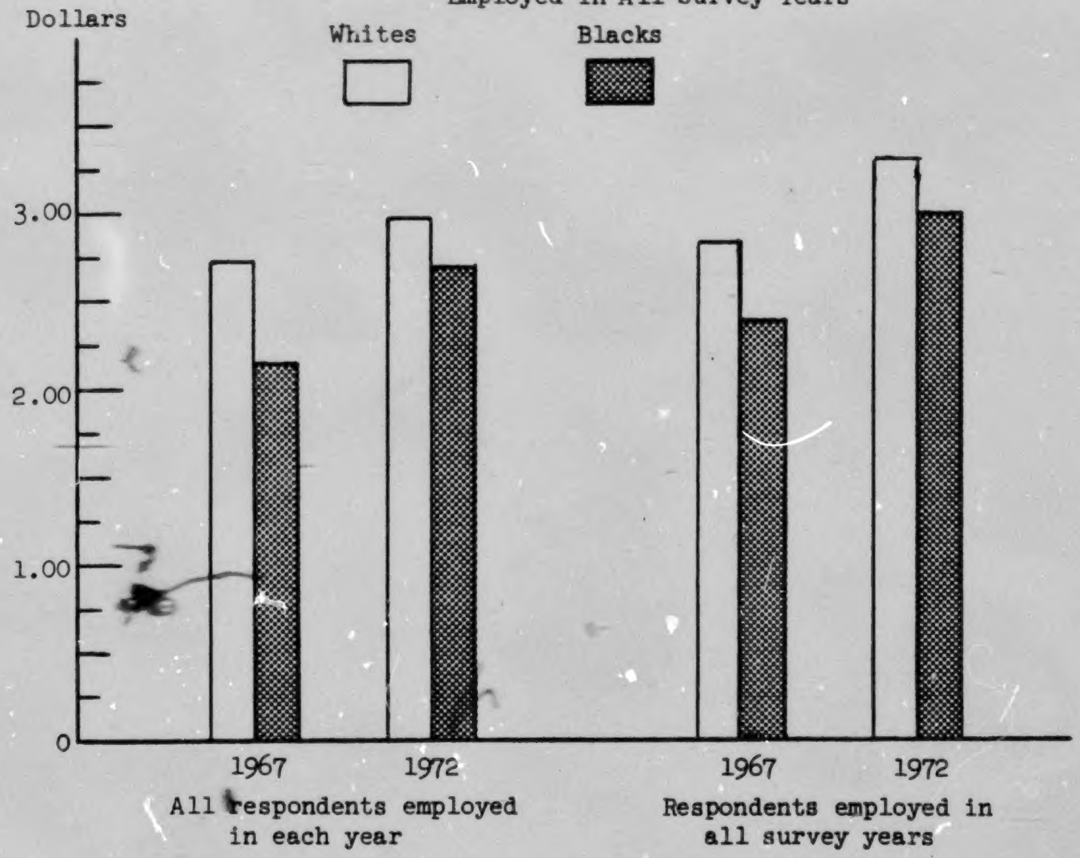
Real Annual Earnings

The 1971 average annual earnings of wage and salary workers who were employed in all survey weeks was $6,244 for white women and $5,369 for black (Chart 1.8). In real terms, these figures represented increases over 1966 earnings of 30 percent for white women and 40 percent for black. The fact that relative increases in annual earnings surpassed the relative increases in hourly earnings for both blacks and whites reflects the rise over the five-year period in hours worked per week and weeks worked per year. As a consequence of the greater relative earnings increases of black women, the white-black ratio of annual earnings dropped over the five-year period from 1.26 to 1.16.

Contribution of Employed Wives to Total Family Income

In married-spouse-present families, total 1971 income was considerably higher where the wife was employed than where she was not. In white families in which the wife had wage and salary earnings, 1971 family income averaged $15,954 in contrast to $13,536 for families in which the wife had no such income; the corresponding figures for black families were $11,731 and $8,331. Moreover, the contribution of respondents' earnings to total family income was substantial, amounting to 26 percent for whites and 35 percent for blacks (Table 1A-19). These proportions were surprisingly

Chart 1.7 Real Average Hourly Earnings, by Race: 1967 and 1972 Respondents Employed in Each Year Compared with Respondents Employed in All Survey Years



Source: Appendix Tables 1A-16 and 1A-17.

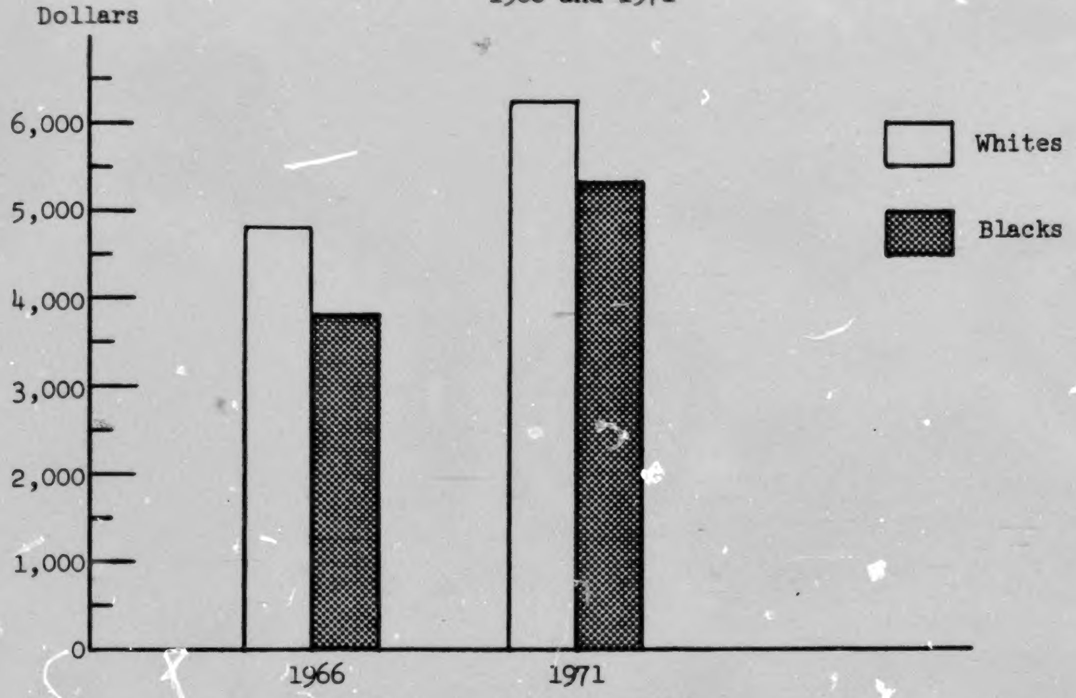
similar across family income categories, except for the lowest income category of whites. Among white families with incomes under $8,000, the wife's earnings accounted on average for almost one-half. In every other income category, however, the wife's proportion fell within the relatively narrow range of 24 to 28 percent. Among blacks, wife's earnings ranged between 26 percent and 38 percent across all income categories.

Summary

Speaking in terms of averages, the labor market position of women who were in their thirties and early forties in 1967 improved over the ensuing half decade. As many of the women were freed from the responsibility of caring for young children and as attitudes toward market work became

38

Chart 1.8 Mean Wage and Salary Income in 1971 Dollars, by Race: 1966 and 1971



Source: Appendix Table 1A-18.

somewhat more permissive, the extent of labor force participation increased; among those at work, full-time employment became more prevalent. However, while there was movement in both directions over the five-year period, a large majority of women were in the same labor force status in 1972 as in 1967.

Of the women who were in the labor force at both dates, a majority perceived that they had progressed during the period, and only 1 in 25 reported retrogression. These attitudes perhaps reflected the substantial increases in real hourly and annual earnings that occurred over the period, and the even larger increases experienced by those whose labor market participation was continuous. In 1971 employed married women made substantial contributions to family income--about one-fourth for whites and one-third for blacks--and the proportions were remarkably stable across family income categories.

In many respects, differences between black and white women became less pronounced over the half decade. For example, because labor force participation of blacks fell while that of whites rose, there was less difference in participation rates in 1972 than there had been in 1967. Differences in attitude toward market work also became smaller over the period. Finally, because black women enjoyed larger relative gains in earnings, white-black earnings differentials declined between 1967 and 1972. As will be noted in a later chapter, however, the racial differential in occupational status actually widened somewhat, which may explain why larger proportions of whites than of blacks perceived progress over the period.

CHAPTER II

LONGITUDINAL PATTERNS OF FEMALE LABOR FORCE PARTICIPATION

Francine D. Blau*

The extent and determinants of female labor force participation have been the focus of considerable attention on the part of social scientists. However, the empirical investigation of this subject has relied primarily on cross-sectional data. Thus, the longitudinal patterns of women's involvement in market work remain a relatively unexplored area. In this chapter, we attempt to extend our knowledge of female labor market behavior by summarizing these longitudinal patterns. Our purpose in this investigation is primarily descriptive, an effort to provide information on longitudinal patterns of labor market activity among women in their late thirties and forties which is comparable to the cross-sectional information currently readily available from a myriad of published sources.[1]

The NIS provides two types of data regarding the extent of market involvement over time of women in this age group. First, at the time of the initial survey in 1967, detailed work histories were obtained from respondents. In the first section, we summarize the previous work experience of women in the sample. Second, over the survey period, information is available regarding entries into and exits from the labor force. In the second section, we take advantage of these data on comparative labor market status to examine the relationship of these labor market flows to changes in participation rates and to the average level of experience of women in the labor force.[2] In the third section, we briefly summarize the major conclusions of the paper.

*Assistant Professor of Economics and Labor and Industrial Relations, University of Illinois at Urbana-Champaign. I am extremely grateful for the valuable comments and advice of my recent colleagues at the Center for Human Resource Research, particularly Herbert Parnes, Gilbert Nestel, Carol Jusenius, Andrew Kohen, and John Grasso. I would also like to thank Lawrence Kahn and Marianne Ferbert for their helpful comments on an earlier draft of this paper. I am indebted to Sylvia Moore and Ellen Kreider for their excellent research assistance. Final responsibility for errors and omissions, however, remains my own.

[1] For tabulations of cross-sectional data on labor force participation rates, see, for example, the Manpower Report of the President, April 1975. For examples of empirical studies of female labor force participation utilizing cross-sectional data, see Mincer (1962), Cain (1966), Bowen and Finegan (1969), and Sweet (1973).

I LIFE-CYCLE PATTERNS OF PARTICIPATION

In this section the retrospective work histories of women in the sample during the years between school completion and the 1967 survey are summarized. The focus is upon two major areas where such information on work experience may be particularly instructive.

First, we investigate the extent to which three variables which are strongly related to the probability of labor force participation at a point in time--marital status, presence of children, and race--are similarly associated with the extent of work experience during the period prior to the 1967 survey. While the reasons for expecting these groups to differ with regard to previous market involvement are fairly obvious, the magnitude of such differences is of interest.[3] Moreover, it is important to control for these factors in examining other relationships.

Second, we examine the consistency in the pattern of labor market involvement of women in the sample in the period up to 1967. We expect women to exhibit consistent patterns of participation for two reasons. First, many of the variables associated with labor force participation at one point in time--for example, level of education, extent of household responsibilities, relative magnitude of income available from other sources, tastes for market work--are likely to manifest an influence over behavior during other periods as well. Second, to the extent that earnings are related to experience, women with greater labor market experience will command higher market wage rates than women with similar characteristics, but less experience. Thus, at any moment in time the incentive to engage in market work is likely to be greater for women with more work experience than for those with less.

---

[2] Throughout this analysis we have restricted the sample to respondents who were interviewed in each of the three survey years: 1967, 1969, and 1971, in order to examine a fixed population. It may also be helpful to note at this point that in order to be comparable, entry and exit behavior must be studied over intervals of equal length. Thus, we examine entry and exit rates during the 1967 to 1969 and 1969 to 1971 periods. Unlike the other chapters in this volume, this one does not utilize data collected in the 1972 survey.

[3] For cross-sectional analyses of differentials in labor force participation with respect to these and other factors, see, for example, Cain (1966); Bowen and Finegan (1969); and Sweet (1973).

While the reasons for expecting consistent patterns of participation are fairly straightforward, the magnitude of this relationship is of considerable interest. It is measured in two ways. First, we examine the extent to which labor force participation at a point in time--in this case, the 1967 interview date--is related to prior labor market experience. Our expectation is that, on average, labor force participants will exhibit a pattern of higher past involvement in market work than nonparticipants. In other words, we hypothesize that labor force participation at a point in time will be selective of women with greater prior labor market experience. Second, among ever-married women with children (the majority of respondents) we investigate the extent to which participation in market work in one interval of their lives, e.g., between school and marriage, is positively related to their participation in market activity in a subsequent interval, e.g., between marriage and the birth of their first child.[4]

It is important to note that when the retrospective work experience data were obtained, respondents were asked in how many years they had worked six or more months. Thus, the reader should bear in mind that a "year" of work experience under this definition may represent less than a full year of actual market work.[5] Similarly, women who have accumulated no "years" of work experience during a particular period in their lives may in fact have worked less than six months in one or more of the years in that interval. For ease of exposition we shall refer to women who have not worked six or more months in any of the years elapsed in an interval as having no work experience in the interval.

Post School Work Experience

Longitudinal data regarding the proportion of years worked by women between school completion and 1967 generally confirm what would be expected from cross-sectional findings. Table 2.1 shows the proportion of years worked by women in the sample during this period by race and marital status/child categories. Among both whites and blacks, ever-married women worked on average a smaller proportion of the years elapsed since school completion than never-married women and, particularly among whites, the differences are of considerable magnitude. Further, where sufficient data are available, it may be seen that the presence of children reduces the extent of work intensity for both marital status groups. Racial

---

[4] From the retrospective work histories, data on the extent of participation in market work are available for all respondents for the years between school completion and 1967. For ever-married women with children, data are available on work experience in three intervals: between school completion and first marriage, between first marriage and birth or acquisition of first child, and between birth or acquisition of first child and 1967.

[5] An additional caveat is that full- and part-time work are not distinguished.

differentials in work experience between blacks and whites are most pronounced among ever-married women with children (EMWC). Black women in this category had worked on average 52 percent of the years elapsed since school completion as compared to 39 percent for their white counterparts. While a considerably higher proportion of black than white women in the EMWC group worked for more than three-quarters of the years elapsed, the same proportion of black as of white women, 9 percent, had no work experience during this interval.

As noted earlier, the NLS data permit us to explore an additional question regarding the work histories of women. At any particular point in time, some women from each race and marital status/child category are labor force participants, while others are out of the labor force. We expect the two groups will differ in terms of their past work experience. The data in Table 2.1 suggest that such a difference exists and that it is of considerable magnitude. When we control for labor force status as of the 1967 interview date, we find that within every race and marital status/child category, labor force participants have worked a substantially higher proportion of the years elapsed than those outside the labor force. To illustrate, among whites in the EMWC group, those who were in the labor force in 1967 had worked 52 percent of the years since school completion, while those out of the labor force at the survey date had worked an average of 28 percent of this time--15 percent of the latter group had no work experience in this interval.

In Table 2.2, we examine the differences in work experience between the 1967 labor force and nonlabor force groups among ever-married women with children. In this case we consider the period subsequent to the birth or acquisition of the first child. Particularly among whites, the experience differential between the two labor force groups is greatly increased during the more recent period. White labor force participants had worked 45 percent of the time elapsed since they assumed the care of their first child, as compared to only 12 percent for nonparticipants--60 percent of the latter group had no work experience during this interval.

Work Experience of Ever-Married Women with Children over the Marriage and Birth Cycle

In this section, we examine the work experience of ever-married women with children during three intervals in their lives. First, we consider the relationship of work status in the interval between school completion and first marriage to work status in the interval between first marriage and birth or acquisition of first child. Second, we examine the relationship of work status in the interval between marriage and child to the extent of subsequent labor market experience.

Table 2.3 shows the work status of women between marriage and child, controlling for premarital work status. In order to clarify the relationship between work status in these two intervals, the sample has been restricted to women for whom school completion occurred prior to first marriage and first marriage preceded the birth or acquisition of first

47

b Rows may not sum to 100 due to rounding.

child. Two post-marriage work status categories have been distinguished: worked one or more years between first marriage and first child--MC; did not work one or more years between first marriage and first child--NMC.

As expected, there is a strong relationship between work status prior to marriage and work status in the subsequent interval. Among both blacks and whites, approximately three-fifths of the SM group worked in the interval between marriage and child, as contrasted to one-fifth of the NSM group.

In Table 2.4, we show the extent of post-child work experience among ever-married women with children, conditional upon their work status in the interval between first marriage and child. In order to exhaust the sample, we have distinguished an "other" category composed of women for whom the birth or acquisition of first child occurred prior to or in the same year as first marriage.

Among both black and white women, those who had worked in the interval between marriage and child exhibited a pattern of higher work intensity during the years after they assumed the care of their first child than those who had not worked in this interval. For the most part, those in the "other" category appear to pursue an intermediate pattern between the MC and NMC groups with regard to their post-child work experience. This suggests that the assumption of child care responsibilities in the same

year or prior to marriage may have a negative effect on work experience in the post-child period.

Summary

In summary, an examination of the retrospective data collected in the 1967 survey supports some inferences that might be made both from presently available cross-sectional data and from economic theory. First we have found that the cross-sectional differences in labor force participation rates by marital status, presence of children and race are

reflected in differing work intensities for these groups during the pre-1967 period. Second, after controlling for these factors, we have found that women in this age group exhibit relatively consistent patterns of labor force participation in the period preceding the 1967 survey. This consistency was demonstrated along two dimensions. First, we have found that participation in market work at any point in time, in this case the 1967 interview date, tends to be positively related to the extent of prior labor market experience. Second, we have found that for ever-married women with children (the majority of respondents) work experience in one interval of their lives, e.g., between school and marriage, tends to be positively related to their participation in market activity in a subsequent interval, e.g., between marriage and the birth or acquisition of their first child.

II ENTRIES, EXITS AND CHANGES IN LABOR FORCE PARTICIPATION RATES, 1967 TO 1971

The dynamics of changes in the labor force participation rates of women in the sample over the four-year period 1967 to 1971 may be examined in terms of the longitudinal patterns of their participation in market work. Changes over time in the labor force participation rate (LFPR) of a specific population group are governed by the magnitude of the flow of entries into the labor force relative to the flow of exits from the labor force.

Some observers have implicitly assumed that it is possible to infer this underlying entry and exit behavior from observed trends in LFPR's. For example, it has been suggested that secular increases in female LFPR's, fueled as they must be by new entrants, have been accompanied by secular increases in entrants as a proportion of the labor force.[6] Two consequences of the postulated rise in entrants as a proportion of the labor force have been noted. First, it is argued that entrants are definitionally more likely to undergo a period of measured unemployment while conducting their job search than current labor force participants. Thus, it has been suggested that rising female LFPR's are responsible for secular increases in the unemployment rates of women relative to men.[7] Second, since entrants are likely to have less experience than current labor force participants, it has been claimed that the average level of experience of the female labor force must be declining. Thus rising female labor force participation rates are seen as contributing to a

---

[6] See, for example, Niemi (1974) and the Economic Report of the President, February 1974, p. 158.

[7] See Niemi (1974). For a critique of this argument see Ferber and Lawry (1976).

51

growing aggregate earnings gap between men and women.[8] However, for the most part, data have not been available to test directly whether entrants are indeed increasing as a proportion of the female labor force and whether, in fact, the average experience of the female labor force is declining.[9] As will be seen below, rising LFPR's have no necessary implications for the ratio between new entrants and the total labor force, nor for the average experience of labor force participants.

The purpose of this section is two-fold. First, we seek to clarify the simple algebraic relationships between entry and exit behavior and temporal changes in LFPR's. This exercise clearly demonstrates that underlying entry and exit rates must be measured directly and cannot be inferred from observed changes in LFPR's. Second, we present observations on the relationship of entry and exit behavior to changes in LFPR's for women in the NLS sample. These relationships are first examined longitudinally--as the cohort ages over time. Next, they are analyzed cross-sectionally--for women aged 35 to 44 at each survey date.

In evaluating our findings, it is important to bear in mind that they relate to a specific economic climate and a specific age group of women. Observations on exit and entry behavior over two time periods--1967 to 1969 and 1969 to 1971--are not sufficient to establish a trend--let alone a deviation from a trend due to labor market conditions. However, our findings do indicate that a variety of changes in underlying entry and exit behavior is compatible with observed changes in LFPR's. Moreover, they provide specific case studies of the underlying behavior of these parameters for groups experiencing increasing, decreasing, and stable LFPR's during the period.

The Algebraic Relationships

The relationship of LFPR's to flows of entries into and exits from the labor force may more easily be demonstrated if we introduce some simple terminology and notation. Let:

P = the size of the relevant population group.

L_t = the size of the group in the labor force at time t.

---

[8] See the Economic Report of the President, February 1974, p. 158.

[9] For an important exception, see Mallan (1974). Utilizing data from the continuous work history sample maintained by the Social Security Administration for the period 1961 to 1971, Mallen found no evidence of such secular trends. See also Jusenius and Shortlidge (1975) for an analysis of entry and exit behavior utilizing the NLS data for this cohort.

5∂

O_t = $P-L_t$ = the size of the group out of the labor force at time t.

X_t = the number of "exiters" at time t, i.e., those in the labor force at time t-1 who have exited from the labor force by time t.

S_t = the number of "stayers" at time t, i.e., those in the labor force at time t-1 who have stayed in the labor force to time t.

E_t = the number of "entrants" at time t, i.e., those out of the labor force at time t-1 who have entered by time t.

L_t and O_t indicate the number of women in each labor force category at time t. X_t, S_t, and E_t represent the number of women at time t who satisfy the indicated requirements in terms of their comparative labor market status at time t and in the preceding period, time t-1. At any point in time, the labor force group is composed of stayers and entrants from the preceding period. The impact of exits from and entries into the labor force on changes in the size of the labor force over time may be expressed by the following relationship:

$$\Delta L_t = (L_t - L_{t-1}) = (E_t - X_t) \qquad (1)$$

Thus, if the number of entrants exceeds the number of exiters, the labor force will increase in size between the two periods. If the number of entrants is less than the number of exiters, the labor force will decrease in size. Finally, if E_t equals X_t, exits are exactly counterbalanced by entries and the size of the labor force will remain unchanged.

It is helpful to obtain a direct relationship among exits, entries and changes in the LFPR over time. To do this we simply express the relevant concepts as ratios to the size of the population (P).[10] Thus:

$$\Delta \text{LFPR}_t = \left(\frac{L_t}{P} - \frac{L_{t-1}}{P}\right) = \left(\frac{E_t}{P} - \frac{X_t}{P}\right) \qquad (2)$$

As equation (2) shows, the LFPR will increase if $\frac{E_t}{P}$ is greater than $\frac{X_t}{P}$; decrease if $\frac{E_t}{P}$ is smaller than $\frac{X_t}{P}$; and remain unchanged if $\frac{E_t}{P}$ is equal to

---

[10] Throughout the subsequent analysis, we shall be analyzing the labor force behavior of population groups of constant size (P). This is because the sample has been restricted to respondents who were interviewed in the 1967, 1969, and 1971 surveys. However, it should be noted that, in a more general model, P might change over time due to mortality and international migration.

$\frac{X_t}{P}$. This is an extremely simple, but nonetheless an extremely crucial relationship. It demonstrates that information regarding temporal changes in the LFPR of a particular population group only provides information regarding the relative magnitude of entries and exits--i.e., expressed as proportions of the population. It gives no indication of the absolute magnitude of either.

Since the flow of entries into and exits from the labor force determine the changes in LFPR's over time, it is important to consider the parameters which govern the magnitude of these flows. Further, since we are also interested in the composition of the labor force--the proportion which stayers and entrants comprise of the total--it is also useful to consider the determinants of the size of the stayer group. Again, some terminology and notation will be useful in expressing these relationships.

Let:

$x_t = \frac{X_t}{L_{t-1}}$ = the "exit rate" or the proportion of those in the labor force at time t-1 who have exited from the labor force by time t.

$s_t = (1 - x_t = \frac{S_t}{L_{t-1}}$ = the "staying rate" or the proportion of those in the labor force at time t-1 who have stayed in the labor force to time t.

$e_t = \frac{E_t}{O_{t-1}}$ = the "entry rate" or the proportion of those out of the labor force at time t-1 who have entered the labor force by time t.

Exit, staying, and entry rates may be considered estimates of conditional probabilities. That is, given the labor force status of a woman in the preceding period, they estimate the probability that she will be in the specified group in the current period. For example, an exit rate of .15 implies that there is a 15 percent probability that a woman selected at random from the labor force group at time t-1 will have exited from the labor force by time t, and an 85 percent probability that she will have stayed to time t.

The relationship between exit and entry rates and the ratios of exiters, stayers and entrants to the population at time t are given below:

$$\frac{X_t}{P} = x_t \cdot \left(\frac{L_{t-1}}{P}\right) = x_t \cdot LFPR_{t-1} \qquad (3)$$

$$\frac{S_t}{P} = s_t \cdot \left(\frac{L_{t-1}}{P}\right) = (1 - x_t) \cdot LFPR_{t-1} \qquad (4)$$

$$\frac{E_t}{P} = e_t \cdot \left(\frac{O_{t-1}}{P}\right) = e_t \cdot (1 - LFPR_{t-1}) \qquad (5)$$

Thus, the magnitude of exiters, stayers, and entrants relative to the population depends not only on the relevant exit and entry rates, but also on the LFPR in the preceding period. Some examples may be helpful in illustrating the importance of this point.

First, let us contrast the situation of two population groups, both having the same exit and entry rates over a particular period, but one of which had a high and the other a low LFPR in t-1. The group for which $LFPR_{t-1}$ is high may exhibit little or even negative growth in its LFPR over the period, while the group for which $LFPR_{t-1}$ is low may exhibit a large increase. The reason is simply that for the high LFPR group the given exit rate generates a higher flow of exiters relative to population, while the given entry rate generates a lower flow of entrants relative to population.

A second example is provided by considering the change in LFPR's for a given population group over time. Let us assume that the LFPR of a given group is increasing over time and that entry and exit rates remain constant. As the proportion of the group that is in the labor force grows, the impact of a given exit rate is increased, while the impact of a given entry rate is reduced. Given constant exit and entry rates, the arithmetic increase in the LFPR will decline over successive periods, approaching zero in the limit. Thus, while the LFPR may continue to increase for a time even with constant entry and exit rates, if the arithmetic increase in LFPR's for a particular population group is maintained or increases over successive periods, then a secular change in entry rates and/or exit rates must have occurred. However, only the data can reveal the underlying pattern.

Finally, let us consider the case in which both LFPR's and entry rates for a particular population group are rising over time such that $\frac{E_t}{P} > \frac{E_{t-1}}{P}$, while the staying rate remains constant. Will new entrants comprise a higher proportion of the labor force at time t than at time t-1? Not necessarily. As the proportion of the group that is in the labor force grows over time, stayers will tend to rise as a proportion of the population, even with constant staying rates. The composition of the labor force will depend on which group--stayers or entrants--is increasing faster.

The Longitudinal Analysis

In this section we explore the relationship of changes in LFPR's in selected periods between 1967 and 1971 to flows of entries into and exits from the labor force. The LFPR's are available for three survey dates: 1967, 1969, and 1971. Entry and exit behavior may be observed over two periods: 1967 to 1969 and 1969 to 1971.[11]

Our findings for the cohort of women are presented in Table 2.5. We shall first consider the experience of the total cohort of white and black women, then of specific marital status categories within each race group. Between 1967 and 1971, there was an increase of 8 percentage points in the LFPR of white women, equally divided between the two subperiods: 1967 to 1969 and 1969 to 1971. The arithmetic increase in LFPR's over the two subperiods was maintained by a small decline in exit rates between 1969 and 1971--from 15 to 14 percent--and a larger increase in entry rates during the same period--from 20 to 22 percent. As a result, entrants and exiters relative to the population remained roughly constant.

The experience of black women over this period was quite different. There was a decline of 3 percentage points in their LFPR between 1967 and 1971, occurring in the latter part of the period. The importance of the base year LFPR in determining the impact of specific entry and exit rates may be illustrated by comparing the experience of black and white women between 1967 and 1969. During that period, the exit rate of black women, 14 percent, was slightly less than that of white women, while their entry rate, 29 percent, was considerably higher. Yet the black LFPR was stable in that period, while the white LFPR increased. This was due to the higher black LFPR in 1967--68 percent in comparison to 48 percent for whites. Thus the black exit rate was applied to a higher proportion of the population than in the case of whites, while the black entry rate was applied to a lower proportion of the population. The decline in the LFPR of black women which occurred between 1969 and 1971 was due to a 6 percentage point decline in the black entry rate--there was no increase in the average propensity of black women to exit from the labor force. The net result of the differing experiences of black and white women in the sample over the 1967 to 1971 period was a substantial decline in the racial differential in LFPR's--from 20 percentage points in 1967 to 10 percentage points in 1971.

In contrast to the average experience of the total group of whites, the increase in the LFPR of married, spouse present (MSP) women was somewhat greater during the 1969 to 1971 period than in the two preceding years. This escalation was associated with a small decline in exit rates and a

---

[11] Again, note that for intertemporal comparisons, entry and exit rates must be examined for periods of equal length. Thus, an analysis of entries and exits between 1971 and 1972 is excluded.

b Mathematical relationships may not hold precisely as indicated due to rounding error.
c Includes respondents reporting changes in marital status between 1967 and 1971.
d Respondents in indicated marital status category in each survey year: 1967, 1969, and 1971.

57

larger increase in entry rates--from 19 percent to 21 percent. Most probably this increase in entry rates was tied to a diminution in the household responsibilities of this group as their children aged.

Again within this marital status group we find sharp contrasts between the experience of black and white women. Among blacks the LFPR remained stable throughout the 1967 to 1971 period. However, this stability was the net result of fairly large changes in exit and entry behavior over the period. Between the 1967 to 1969 and the 1969 to 1971 periods, there was a sizable drop in exit rates--from 17 to 14 percent--but also a large drop in entry rates--from 31 to 24 percent. Thus the impact of a greater tendency of those in the labor force to remain was counterbalanced by a reduction in the propensity of those outside the labor force to enter. As a result of these differing trends the black-white differential in LFPR's shrank over the four-year period from 21 to 13 percentage points.

The greater financial necessity of market work on average among widowed, divorced and separated (WDS) white women in comparison to the MSP group is reflected in the higher LFPR's of the former in each survey year, as well as in their lower exit rates and higher entry rates. However, the two groups exhibited different trends in LFPR's over the period. Among WDS women, LFPR's increased between 1967 and 1969 but declined slightly between 1969 and 1971. As a result, the LFPR differential between white women in the two marital status categories declined from 31 percentage points in 1967 to 25 percentage points in 1971.

Within the group of WDS women in 1967, the black-white differential in LFPR's was considerably smaller than among MSP women. Additionally, among blacks, the LFPR differential between MSP and WDS women was considerably smaller in 1967 than among whites. Both the differentials by race and within the black group by marital status were substantially narrowed by a decline of 6 percentage points in the LFPR of the WDS group between 1967 and 1971. This decline was concentrated in the 1969 to 1971 period, and associated with both an increase in exit rates and a decrease in entry rates. As a result, by 1971 white women in the other ever-married category had a higher LFPR rate than their black counterparts.

Among whites, never-married women had the highest LFPR's of the marital status categories, as well as the lowest exit rates. As might be expected, their pattern of participation over the period was relatively stable. Within this group, the white LFPR was higher than the black, and blacks exhibited greater changes in exit and entry rates over the period, perhaps in part due to the higher proportion of black than of white women in this category with children.

In summary, we have found, among whites, considerable increases in LFPR's over the 1967 to 1971 period attributable largely to the MSP group. These increases were principally associated with rising entry rates over the period, although declining exit rates also played a role. Among WDS women the gain in LFPR's over the period was smaller due to an increase

58

in the exit rate as well as a decline in the entry rate for this group. Among blacks, with the exception of the relatively small group of never-married women, a pattern of declining entry rates is sharply discernible. Exit rates declined substantially among MSP women, but increased among WDS women. The net result of these differential movements of exit rates in combination with declining entry rates was a stability in the LFPR's of MSP women, a substantial decline in the LFPR of WDS women, and a smaller decline in the LFPR of the total group.

Labor force composition and average experience We now turn to an examination of the impact of these patterns of changes in LFPR's on the proportions of the female labor force comprised of stayers and entrants, and on the average years of experience of labor force participants in each year.[12] These are in fact interrelated issues. Our findings regarding the past work patterns of labor force participants and nonparticipants in 1967 indicate that the latter group had considerably less labor market experience than the former. Thus, it is likely that new entrants will exert a downward pull on the average experience of the labor force group. However, there is one factor which tends to counterbalance this effect of entries on the average experience of labor force participants. It is the selectivity of both entry and exit behavior with respect to prior labor market experience.

This selectivity is illustrated in Table 2.6, which shows the average years of experience of women as of 1967 and 1969, classified by their labor market behavior over the periods 1967 to 1969 and 1969 to 1971, respectively. The data suggest that, within race/marital status categories, exiters on average had fewer years of experience than stayers, prior to the occurrence of the actual behavior; entrants on average had more years of experience than those who remained out of the labor force in both periods, again, prior to the occurrence of the actual behavior. The data also suggest, however, that exiters generally have more experience than entrants. Thus, while the selectivity of entry and exit behavior in terms of past experience dampens the negative impact of new entrants on the labor force group, it does not eliminate it.

It is interesting to note that, among blacks, the experience advantage of entrants relative to those who remained out in both periods increased from two years in 1967 to 1969 to three or four years in 1969 to 1971. This tendency for labor force entry to become even more selective with respect to prior labor market experience during this period coincides with

---

[12] In this and the succeeding cross-sectional analysis, years of work experience in the post-1967 period are measured in a fashion comparable to the pre-1967 period. Thus, if a woman worked between 25 and 50 percent of the weeks elapsed in a two-year interval, she was credited with one year of work experience. If she worked between 51 and 100 percent of the weeks elapsed, she was credited with two years of work experience.

f Respondents out of the labor force at both survey dates.

a marked decline in entry rates among blacks and appears to be consistent with the possibility of a discouragement effect in response to the deteriorating economic climate.

The composition of the labor force in terms of stayers and entrants, and the average years of experience of each group and of the total labor force are shown in Table 2.7. In this case, average experience is shown subsequent to the occurrence of the indicated behavior. It may be noted that among those groups experiencing the largest increase in labor force participation rates over the period--the white total and MSP groups--stayers as a proportion of the labor force increased only slightly. In contrast, where declining entry rates prevailed--WDS white women and all black groups except the never-married--the proportion of stayers increased substantially. As a result, the white labor force in the total and MSP groups gained an average of only one year of labor market experience for every two chronological years, while the other groups generally gained an average of two years of labor market experience for every two chronological years. Since blacks and whites on average experienced differential patterns of entry behavior, the black advantage in average years of experience increased from one year in 1967 to three years in 1971.[13]

The Cross-Sectional Analysis

In this section we are concerned with the relationship of entries into and exits from the labor force to changes in age-specific LFPR's. We have termed this the cross-sectional analysis because we are dealing with different, although overlapping, population groups in each survey year, rather than with a fixed population group as in the preceding longitudinal analysis. We hold the effect of age constant by restricting the sample in each survey year to women aged 35 to 44. Similarly, marital status, like age, is defined with respect to survey year status. The purpose of this procedure is to obtain age-specific LFPR's by marital status for each survey year which are comparable to those which would be obtained from cross-sectional data. We then utilize the longitudinal nature of the NIS data to examine the prior labor market status and participation rates of women in each cross-sectional group--thus adding a longitudinal dimension to the analysis.

The strictly longitudinal analysis presented in the preceding section illustrated the difficulty in drawing inferences about entry and exit

---

[13] The observed differences in the average years of work experience of labor force participants between 1967 and 1969, and between 1969 and 1971 were found to be statistically significant at the 5 percent level for the total black and white groups, and for each marital status category except white never-married women (1967 to 1969), black WDS women (1967 to 1969), and black never-married women (1967 to 1969 and 1969 to 1971).

[a] Respondents interviewed in 1967, 1969, and 1971 who were in the labor force in the respective year.

[b] Includes respondents reporting changes in marital status between 1967 and 1971.

[c] Respondents in indicated marital status category in each survey year: 1967, 1969, and 1971.

[d] Means not reported where base represents fewer than 25 sample cases.

[e] Includes respondents for whom responses on work experience were nonascertainable.

behavior from observed changes in the LFPR's of a specific population group. Such a procedure is even more hazardous in the case of age-specific LFPR's, since an additional problem is introduced, i.e., the longitudinal changes in LFPR's may diverge from the cross-sectional changes, and it is the longitudinal changes that are relevant to an examination of entry and exit behavior.

Our findings regarding the relationship between exit and entry behavior and observed cross-sectional changes in LFPR's are shown in Table 2.8. The cross-sectional LFPR's for each race and marital status group are shown in the boxes in rows 2, 9, and 16. The cross-sectional changes in LFPR's during the 1967 to 1969 and 1969 to 1971 periods are shown in parentheses in rows 8 and 15--the longitudinal changes are shown without parentheses.

Over the 1967 to 1971 period, whites experienced increases in age-specific (cross-sectional) LFPR's in all marital status categories, the largest increases occurring among the MSP group. In contrast, blacks experienced decreases in age-specific (cross-sectional) LFPR's in all marital status categories, the largest declines occurring among WDS women and the small group of never-married women.

Among whites, there was a tendency for exit rates to rise over the period for all marital status groups except the never married. The most pronounced increase occurred among WDS women. Among blacks, exit rates remained constant, on average. In contrast to the experience of white women, exit rates declined among black women in the MSP category. However, as was the case among white women, there was a sharp increase in exit rates among black women in the WDS category.

As we found in the longitudinal analysis, white women, on average, experienced increases in entry rates which were largest among women in the MSP category. On the other hand, we again find a pronounced tendency for entry rates to decline among blacks for all marital status groups except the never-married.

The effect of these changes in entry and exit rates depends upon the base level participation rates for each population group. The net effects are summarized in Table 2.9. Entrants rose as a proportion of the population on average for the total white group, and within each marital status category, except among WDS women. Among black women, entrants declined as a proportion of the population on average for the total group, and also for each marital status category, with the exception of never-married women. Stayers declined as a proportion of the population only among black WDS women and the small number of black never-married women.

Labor force composition and average experience Table 2.9 also shows the prior work experience of women by their comparative labor market status in the two periods, 1967 to 1969 and 1969 to 1971. As in

[e] Respondents aged 35 to 44 in each survey date. See supra, p. 2.39 for a further explanation of the cross-sectional analysis.

the longitudinal analysis, there is a tendency for exiters to have fewer years of prior work experience than stayers. For the most part, we also find that entrants tend on average to have more work experience than those who remain out of the labor force in both survey dates. However, white MSP women who entered the labor force between 1967 and 1969 had the same average prior experience as those who remained out of the labor force.

Among whites, we again find that exiters generally had greater average years of experience than entrants. Thus, despite the selectivity of exit and entry behavior with respect to prior experience, the two groups were not identical with respect to previous work experience. Among black women, this pattern prevails in the 1967 to 1969 period. However, in the 1969 to 1971 period, entrants and exiters have approximately the same average prior labor market experience. It appears that, for blacks, declining entry rates between 1969 and 1971 were associated with an even greater selectivity of entry behavior with respect to prior labor market experience.[14] As noted earlier in the case of the longitudinal analysis, this finding is consistent with the possibility of a discouragement phenomenon occurring among blacks. That is, with rising unemployment, those with less labor market experience may have been deterred from seeking employment, or may have briefly entered and withdrawn from the labor force between the two dates after a fruitless search.

The net effect of the trends in entry and exit rates on the composition and average experience of the labor force is shown in Table 2.10. Among the groups experiencing the largest increase in LFPR's--the white total and MSP groups--stayers declined only slightly as a proportion of the labor force. Among white WDS women and among blacks on average and in the ever-married categories, stayers rose as a proportion of the labor force.

The average years of experience of the total white and black labor force groups remained unchanged between 1967 and 1971, with black women having, on average, two more years of work experience than white women. Within race and marital status categories there were some fluctuations in average years of experience, however, never in excess of one year.[15]

Thus, over the four-year period 1967 to 1971, it does not appear that there was any marked change in the composition of the female labor

---

[14] In this regard, it is interesting to note that, although age is held constant in Table 2.9, black entrants have two to three years more experience in 1969 than in 1967.

[15] A pairwise test of the differences in the mean years of work experience of labor force participants was conducted within each race and marital status category for 1967 and 1969, 1969 and 1971, 1967 and 1971. None of the differences were statistically significant at the 5 percent level.

force in the 35- to 44-year age group with respect to the proportions comprised of stayers and entrants, nor in the average level of experience of labor market participants. This was the case even among the total group of white women and those in the MSP category, despite sizable cross-sectional and longitudinal gains in their LFPR's over the period.

III CONCLUSION

In this chapter we have focused upon the longitudinal patterns of involvement in market work among women in their late thirties and forties. The first section was devoted to a summary and analysis of the retrospectively collected work histories of women in the sample during the years between school completion and 1967. The second section was concerned with the relationship of the entry and exit behavior of respondents during the 1967 to 1969 and 1969 to 1971 periods to observed trends in labor force participation rates over those periods.

A major finding of this investigation is that the labor force status of women observed at a point in time--the primary focus of analyses utilizing cross-sectional data--is strongly related to the intensity of their prior work experience. This relationship was manifested over a number of dimensions. First, it was found that observed cross-sectional differences in labor force participation rates of women by marital status, presence of children, and race were also reflected in differing degrees of work experience among these groups during the period prior to the 1967 survey. Second, it was found that, within race and marital status/child categories, labor force participants differed markedly from nonparticipants in the extent of their prior work experience. On average, the group in the labor force at a point in time--in this case the 1967 interview date--had worked a substantially larger proportion of the years prior to that time. This consistency in labor force status over time was also manifested across intervals in the women's lives. Among ever-married women with children (the majority of respondents) where this issue was investigated, it was shown that their work status in one interval of their lives, e.g., between school completion and marriage, was associated with their work status during a subsequent interval, e.g., between marriage and the birth or acquisition of their first child.

Previous work experience was also found to be related to the comparative labor market status of respondents between two points in time. For the two two-year periods, 1967 to 1969 and 1969 to 1971, it was found that exiters from the labor force generally had less prior work experience than stayers, and entrants to the labor force generally had more prior work experience than those who remained out of the labor force on both survey dates.

While in some respects our examination of longitudinal data on labor force participation supported inferences that might reasonably be made from cross-sectional data, in other respects our findings suggest that such inferences can be misleading. In particular, we have demonstrated that entry and exit rates must be measured directly, and cannot be deduced from observed trends in labor force participation rates. Similarly, it was shown that the trends in labor force participation rates for particular population groups bear no necessary relationship to the proportions of the labor force comprised of stayers and new entrants, or to the average experience of labor force participants. In the longitudinal analysis, where the effect of the aging of the cohort was not removed, all race and marital status groups gained in average experience over the four-year period. In the cross-sectional analysis, where the effect of age was held constant and the focus was upon the 35- to 44-year-old group in each survey period, there was no change in the average experience of any of the race and marital status groups over the four-year period.

Our investigation of the comparative labor force status of respondents during the 1967 to 1969 and 1969 to 1971 periods yielded an additional finding of considerable importance. For the most part, the entry rates of black women in all marital status categories (except the never-married) declined substantially between the two periods. In light of the decline in the level of economic activity which also occurred during this time, the possibility of a discouragement effect is consistent with these findings and further investigation of this possible relationship appears to be warranted.

CHAPTER III

FACTORS IN CAREER ORIENTATION AND OCCUPATIONAL STATUS

by

Herbert S. Parnes and Gilbert Nestel[*]

It is symptomatic of the historical social role of women and of their position in the labor market that studies of career patterns, occupational status, and occupational mobility have tended to focus on men rather than women.[1] Studies of these topics have frequently stemmed from an interest in social stratification, and the socioeconomic status of a family has generally been perceived to flow from the position of the husband rather than from that of the wife.[2] Thus, the classic study of The American Occupational Structure by Blau and Duncan was concerned exclusively with men.[3] In his volume on The Psychology of Careers Donald Super pointed out that women's careers had not been systematically studied as had men's, and although he offered a classification system, it had no empirical content.[4] Most of the work that has subsequently been done on career patterns of women has either defined careers solely in terms of extent of work activity without reference to occupation, or has focused on relatively small and homogeneous samples of women--principally those with college educations.[5]

[*] We are indebted to Steven H. Sandell, Randall King, Randall Reichenbach, and Scott Sutton for their collaboration in developing the career status variable. We wish also to acknowledge the faithful research assistance of Randall King, Malcolm Rich, and Shu-O Yang.

[1] See Psatha (1968), p. 267. A very recent exception is a study which utilizes the NIS data base to compare the process of status attainment for women and men. See Treiman and Terrell (1975).

[2] However, for a demonstration that family socioeconomic status is inadequately measured by husband's characteristics alone, see Haug (1973), pp. 86-98.

[3] Blau and Duncan (1967).

[4] Super (1957), pp. 76-79.

[5] As examples of the former, see Vetter and Stockburger (1974) and Mulvey (1963). For examples of studies utilizing an occupational dimension, albeit with restricted samples of highly educated women, see Stone and Athelstan (1969) and Harmon (1970). For an early study of occupational attachment patterns that included both women and men (although with greater emphasis on the latter) see University of Pennsylvania Industrial Research Department (1953).

72

In view of the increasing labor force participation of women, as well as their entrance into fields of activity formerly reserved almost exclusively for men, it is important to know more than we currently do about the patterns of occupational stability and occupational change that characterize their work lives and about the factors that are related to their occupational status. This chapter addresses itself to some of these issues by examining several aspects of the work experience of the women from the time they left school until the time of the 1972 interview. Specifically, the study has two major objectives. The first is to ascertain the correlates of a "career status" among women as evidenced by the pursuit of a single occupation or group of related occupations during a substantial portion of their working lives. The second is to identify the determinants of occupational status at several points in their work lives: (1) upon leaving school, (2) at the time the National Longitudinal Surveys began in 1967, and (3) at the time of the 1972 survey. The following section relates to the factors in career orientation. Section II explores the determinants of occupational status. In the final section the major findings of the study are summarized.

I FACTORS IN CAREER ORIENTATION

The term "career" has been used in at least two different senses. In one of these it means substantially the same thing as an individual's total work history. From this point of view, one may speak of a stable or an unstable career depending upon the extent of the individual's attachment to the labor market and/or the consistency of occupational assignment.[6] In another sense the term may be used to refer to a particular type of work history--i.e., one in which there has been substantial attachment to the labor force and in which there has been a rather firm commitment to a given occupation or type of work, or at least a rather orderly progression up an occupational hierarchy.[7] It is in this sense that the term "career" is used in the present study.

[6] See Form and Miller (1948).

[7] See University of Pennsylvania Industrial Research Department (1953), pp. 11-16. See also, Robert Dubin (1958), p. 276, who says, "An occupational career is the succession of related jobs filled by an individual. The jobs are held in an ordered series, and there is some kind of real relationship among them. Some individuals start in a line of activity which carries on for the rest of their lives . . . There is a great deal of difference between work and a career. Work is the acceptance of employment with the primary objective of securing the income it provides. Each job is viewed as an isolated interval in the process of earning an income. The entrance on a career carries with it a whole series of future expectations extending through the effective lifetime of the individual."

93

Criteria of Career Orientation

Since the degree of stability manifested by women's work histories constitutes a continuum, their dichotomization into those that represent "careers" and those that do not is necessarily somewhat arbitrary. Our criteria for a career status involve two facets of previous work experience: (1) extent of employment experience and (2) pattern of occupational assignment. To qualify as having a "career," a woman first must have worked for six months or more in at least three-fourths of the years that elapsed between leaving school and 1967, and must also have been employed in at least three-fourths of the weeks between the 1967 and the 1972 interviews.[8] Second, a "career" woman must have been in the same three-digit occupational category or in related categories during all jobs for which information was collected in the several surveys.[9] In deciding whether a given pattern of occupational assignments constituted a career, consideration was given not only to the occupational titles themselves, but to the amounts of time served in each and to the recency of the assignment.[10]

On the basis of these criteria, 11 percent of women in the age category under consideration had established careers as of 1972--10 percent of the whites and 14 percent of the blacks (Appendix Table 3A-1). The

---

[8] A smaller number of weeks (viz., 135) has been required for women who were school teachers at the time of the 1967 survey. The reason is that school teachers frequently report the summer vacation period as weeks out of the labor force.

[9] For never-married women with no children, these are the first job after leaving school at which the woman worked six months or longer, the longest job she ever held, and the job she held in each survey week in which she was employed. For ever-married women with no children, the relevant jobs are the following: longest job between school and first marriage; longest job between first marriage and 1967; and jobs held in the survey weeks in which the woman was employed. For ever-married women with children, the relevant jobs are the longest between school and marriage; the longest between marriage and first child; the longest between first child and 1967; and those held in the survey weeks in which the woman was employed. Never-married women with children are represented by only a handful of sample cases, and have been eliminated from the analysis.

[10] A description of the guidelines and coding procedure used to differentiate between "career" and "noncareer" women, as well as some illustrative cases, are presented in the Appendix to this chapter.

74

proportion who met the time criteria but not the occupational criterion was 17 percent--15 percent of the white women and somewhat over a fourth of their black counterparts. Of the women who were employed in 1972, professional and clerical workers were the most likely to have pursued careers; seven out of ten "career" women were in these two occupational categories as compared with almost half of all employed women (Appendix Table 3A-2).

Significance of "Career"

From the foregoing description of the criteria that have been used and from the illustrations shown in the Appendix to the chapter, it will be evident that having had a "career" is not necessarily a rewarding and self-fulfilling experience for a woman. Women may work continuously as the result of financial need as well as personal choice; moreover, so far as consistency of occupational assignment is concerned, a woman can be "trapped" in a career as well as having freely and consciously pursued it. In interpreting our findings it must be borne in mind that the black woman with five years of education who has spent all her life as a domestic servant is as much a "career" woman in the context of this study as the white college graduate who has moved up the ranks from reporter to editor on a metropolitan daily newspaper.

Method of Analysis

In a retrospective analysis of career orientations of women there are many variables for which the direction of causation is by no means clear. For example, if educational attainment is shown to be positively related to the likelihood of a woman's having had a career, this may mean that education stimulates as well as facilitates the pursuit of a career; however, it may mean merely that a prior career aspiration induces a woman to pursue additional education. Similarly, if a favorable attitude on the part of a woman's husband toward her labor market activity is found to be related to the likelihood of her having pursued a career, this may indicate only that her desire for a career led her to select a husband with compatible attitudes. Thus, we make no pretense of presenting a causal model. Rather, on a largely intuitive basis we have sought to identify the characteristics of a woman that are correlated with the likelihood of her having pursued a career as that term has been defined above.

Since we are interested in the net relationship between each explanatory variable and the likelihood of career orientation, we use a multivariate method of analysis--specifically, multiple classification analysis (MCA).[11] This technique allows us to calculate for each category of a particular explanatory variable what the proportion of career women would have been had the members of the category been "average" in terms of all other variables included in the analysis. Differences in these "adjusted" proportions among the various categories of a given variable may be interpreted as indicating the "pure" association of that variable with the likelihood of a career orientation. The dependent variable is dichotomous, with a value of 1 for career orientation and a value of 0 otherwise.[12]

---

[11] Multiple classification analysis is identical to the more commonly used multiple regression analysis with all of the explanatory variables expressed in categorical form, which avoids the assumption of linearity. The constant term in the multiple classification equation is the mean of the dependent variable. The coefficient of each category of every explanatory variable represents a deviation from this mean.

In this section of the chapter we focus exclusively on married women who have borne children, for it is among them that alternatives to a labor market career are most likely to exist. Moreover, it has been necessary to confine the analysis further to women who have been married only once and who were living with their husbands at the time of the 1967 interview. The reason is that the characteristics of the women's husbands comprise an important set of explanatory variables, and our measures of these characteristics relate to the man to whom the respondent was married in 1967.

MCA Results: Career Status

The MCA results are shown in Tables 3.1 to 3.4.[13] It should be clearly understood that these four tables are presenting the results of only one MCA. The explanatory variables have been classified into four categories and have been presented in four separate tables for convenience, but they have all been entered in the same MCA. Thus, the adjusted proportions for each variable reflect the effects of all of the other variables shown in all four tables. Only 7 percent of the married

---

[12] Because we were interested in knowing whether the additional criterion of occupational consistency makes the explanation of career orientation any different from what it would be if based solely on the criterion of continuity of employment ("strong attachment" to labor market), we ran the same MCA with the dependent variable based only on extent of employment experience ("1" if 75 percent work attachment, "0" otherwise). The results were basically similar in pattern to those for career orientation. Also, in order to ascertain whether our explanatory variables are related to consistency of occupational assignment for women who have strong attachment to the labor market, we also ran an MCA using a dichotomous variable where a respondent was coded "1" if she met the occupational criterion for career status and "0" otherwise. The universe was confined to women who met the employment experience criterion. On the basis of an F-test, this MCA did not yield a significant fit.

[13] We originally stratified the MCA by race. The results of a Chow test indicated no significant differences between blacks and whites in the slopes of the explanatory variables. Accordingly, only the pooled results are presented, with race included as an explanatory variable.

76

women who had ever borne (or adopted) children qualify as "career" women. Controlling for other factors, there is no difference in this proportion either by race or by age (Table 3.1).

Family background factors (Table 3.1) Among the family background factors whose relationship to career status we have examined,[14] only location of residence and work status of mother when respondents were teenagers bear a substantial relationship to the likelihood of a career orientation. Women who in their teens had working mothers were more likely to develop careers than those whose mothers had not worked, which suggests the importance of role models in the formative years. The relationship is particularly strong among those women who were living only with their mothers, although it is discernible also among those with both parents in the household. There is an inverse relationship between size of community and likelihood of career status. Women who at age 15 lived in rural areas were twice as likely as those in large cities to pursue careers. The reason for this relationship is not entirely clear, but may reflect a stronger work ethic among the population in rural areas and small towns.[15]

Educational and training characteristics as of 1967 (Table 3.2) There is a fairly regular positive association between educational attainment and the likelihood of a career, similar to that which has been documented in the case of current labor force participation.[16] There are also differences according to college curriculum: graduates of liberal arts programs are less likely to pursue careers than those with degrees in education; graduates of other professional programs have the highest career rates.

Other things equal, career women are considerably more likely than noncareer women to have had concentrated programs of training outside the regular school system. However, for training to make a difference in this regard it must have been of reasonably long duration. There is little or no difference in career rates between those with no training, those with training under one year in duration, and those whose training was in two or more programs. However, among women with training in a single program that lasted at least a year, the career rate is twice as high as for other

---

[14] Nationality and Census region of birth were included in earlier MCA runs, but showed no systematic relationship with likelihood of a career.

[15] The explanation is unlikely to lie in their pattern of activity while residing in rural areas, since labor force participation rates for married women are lower in rural than in urban areas. See Bowen and Finegan (1969), p. 204.

79

women. Possession of a certificate to practice a trade or profession also increases substantially the probability of career status.

Health condition and attitude toward market work as of 1967 (Table 3.3) We had expected that women with health problems affecting work--especially those of long duration--would be less likely to have established careers than those without such limitations. However, the career rates for the several health categories shown in Table 3.3 are too irregular to provide support for this hypothesis. We also hypothesized that careers would be more prevalent among women with "liberated" views on the propriety of labor market activity by mothers. This relationship does appear to prevail: career rates vary monotonically according to the degree to which the woman expresses favorable attitudes toward working mothers. Needless to say, given that the women's attitudes were measured as of 1967, we do not know whether they have determined, or are merely reflective of, the work histories.

Marital and family characteristics as of 1967 (Table 3.4) In the light of their roles as wives and mothers, one expects the extent and character of women's labor market activity to vary according to a number of marital and family characteristics. Not surprisingly, single women and chidless married women are more likely to have careers than the group under consideration here: the respective proportions are approximately one-half, one-third, and 7 percent. But even among married women with children, career status may be expected to vary according to such factors as the number and spacing of the children a woman has borne, the earning capacity of her husband, and the husband's attitude toward his wife's working. These kinds of relationships are shown in Table 3.4.

Career rates among women with only one child are well over twice as high as among those with three or more children. Moreover, among those with more than one child, career rates appear to rise as the average number of years between children increases. The possibility of using siblings as baby sitters may account for this relationship.

Other things being equal, the extent of a woman's labor market activity should be inversely related to her husband's income. Although we have no direct measure of husband's income over the period of his marriage to the respondent, a good proxy is his educational attainment. While career rates do appear to be inversely related to level of education of husband, the relationship does not achieve statistical significance. The expected relationship between husband's health and the likelihood that his wife will have a career is clearly discernible in the data. Women whose husbands have health conditions affecting their work are almost half again as likely as other women to have had careers.

Of all the marital and family characteristics that have been investigated, the one that bears the most pronounced relationship with career status is the respondent's perception of her husband's attitude toward her working in the labor market. Career status declines monotonically as husband's attitude becomes less favorable, and is only

---

one-seventh as prevalent among women who state that their husbands dislike very much the idea of their working as among those who report favorable attitudes. Needless to say, one cannot be certain from these data to what extent women are responsive to the actual attitudes of their husbands and to what extent their perceptions of these attitudes are influenced by their behavior.

II OCCUPATIONAL STATUS

In this section of the paper we turn our attention to the factors determining a woman's relative position in the occupational hierarchy at various points in her work life. Because of its obviously important influence on occupational assignment, we first investigate the determinants

of the amount of education a woman has achieved. Next, controlling for education, we identify the factors affecting the occupational status of the first job she held after leaving school. Third, controlling for occupational status of first job we seek the determinants of the woman's occupational status as of the time of the initial interview in 1967. Finally, with 1967 occupation controlled, the factors associated with variations in occupational status as of 1972 are explored. The third and fourth steps in this investigation amount to an inquiry into the correlates of vertical occupational mobility up to 1967 and over the five-year period covered by the surveys.

Method of Analysis

Each of these four dependent variables has been examined by means of multiple regression analysis. To guarantee that the several stages in the work life under investigation relate to the same set of women, we have confined the universe for each of the four regressions to respondents who were employed in the survey weeks of 1967 and 1972 and for whom information was available for all of the variables in each of the regressions.[17] It should be borne in mind, however, that in another respect the population of women under consideration in this section is broader than in the preceding section, including childless married and never-married women as well as married women with children. A total of 1,245 respondents are included in the analysis.[18] The status measure that has been used to indicate a woman's relative position in the occupational hierarchy is the Bose Index of Occupational Prestige.[19] This measure has the presumed advantage over the widely used Duncan Index of having been developed with respect to female rather than male incumbents of the Census occupational categories.[20]

---

[17] There are three exceptions to this generalization: father's education, father's occupational status, and mother's education. To have eliminated from the universe respondents for whom information on one or more of these variables was lacking would have reduced the sample size by about 500 cases. Consequently, these three variables have been used in categorical rather than continuous form, with an NA category included. Another restriction on the universe in addition to those mentioned in the text is the exclusion of never-married women with children, of whom there are too few for meaningful analysis.

[18] Preliminary analyses, stratified by race, revealed no significant interaction between race and the other explanatory variables in any of the regressions except for occupational status in 1972. Because we had no reasonable explanation for why there should have been an interaction in the case of 1972 job but not in the others, pooled data were used in all the regressions, with race as one of the explanatory variables.

[19] See Bose (1973).

[20] But for a different view, see Treiman and Terrell (1975), p. 176.

In developing the analysis, we have been substantially influenced by the study by Blau and Duncan of the determinants of the occupational status of American males.[21] They employed a basic model in which four variables were used to predict a male's occupational status as of 1962: father's education, father's occupation, respondent's education, and respondent's first job. Path analysis permitted the authors to ascertain both the direct and indirect effects of explanatory variables on the dependent variable. To illustrate, they were able to address the question whether father's occupation affected respondent's first job solely through its influence on the amount of education he received (indirect effect) or whether it was related to the status of respondent's first job even with respondent's education controlled (direct effect). This model was then expanded to inquire whether other characteristics--e.g., race, sibling position, and farm background exerted independent effects upon occupational status.

Although we do not use path analysis, we are able to identify the existence of direct and indirect effects of variables by the order in which we force their entrance into a step-wise multiple regression analysis. To illustrate, the education of respondent's father is one of the variables used to explain respondent's educational achievement. The latter, in turn, is obviously an important variable in explaining the relative status of respondent's first job. In the regression analysis of first job, the education of respondent's father is introduced after respondent's education. To the extent that the former variable is statistically significant, one can conclude that the socioeconomic status of family of origin (i.e., father's educational attainment) exerts a direct influence on the occupational status of respondent's first job over and above its indirect effect through respondent's education.

To take another illustration, we hypothesize that respondent's job status in 1967 will be directly related to the extent of her work experience since leaving school. Moreover, in analyzing the status of 1972 job, we control for status of 1967 job and introduce the pre-1967 work experience variable after a variable measuring work experience between 1967 and 1972. This permits us to ascertain whether extent of labor force participation prior to 1967 affects status in 1972 only by virtue of its effect on 1967 job (indirect) or whether it has an additional (direct) influence on 1972 status. To describe this example somewhat differently, the approach we have taken permits us to ascertain whether vertical mobility between 1967 and 1972 is affected only by work experience between the two dates, or whether prior work experience continues to exert an influence.

---

[21] Blau and Duncan (1967).

Educational Attainment

Table 3.5 presents the results of regressing years of school completed by respondents on a number of explanatory variables.[22] These factors explain about a fourth of the total variance in educational achievement among women in the sample. It is evident that father's education, mother's education, and father's occupation[23] all exercise independent effects upon the amount of education that women in their thirties and forties have received, although the relationships are not perfectly regular. All of these variables, of course, represent facets of the socioeconomic status of the family of origin and have doubtless conditioned the educational achievement of the respondents both by affecting the amount of education they could afford and the amount that they desired. It is noteworthy that the coefficients for most of the categories of mother's education remain significant even with father's education and occupation in the regression. This suggests the influence of the mother as a role model in conditioning the educational aspirations of her daughter.[24]

It is interesting to note that although the gross difference in years of schooling between white and black women is eight-tenths of a year on average, the coefficient of the race variable is only one-tenth of a year and comes nowhere near being statistically significant. Thus, the data are consistent with the belief that the years-of-schooling difference between white and black women of this generation is explained exclusively by differences between the two races in characteristics determining educational attainment. In the step-wise regression, the size of the coefficient for race dropped substantially when father's education was introduced, and dropped still further in the last step when father's occupation entered the regression.

The historical trend toward higher levels of education is reflected in the fact that a woman in her late forties, other things equal, has an average of three-tenths of a year less education than a woman in her early forties. There is no statistically significant difference, on the other

---

[22] The order in which the variables appear in the stub of the table is the order in which they were introduced into the step-wise regression program. Thus although the table shows only the results of the final step, we were able to observe, for example, the coefficients for father's education both before and after education of mother was added.

[23] For ease of expression we refer to this variable as "father's occupation," although for those respondents whose fathers were not a part of the household when respondent was 15 years old the occupation reported is that of head of household.

[24] Cf. Treiman and Terrell (1975), p. 177.

[a] For description of universe, see text, p. 68.

[b] Regression coefficient indicates the deviation in years of schooling of the indicated category of respondents from the reference group--i.e., the omitted category. For example, the reference group for race is white women; for family structure at age 15, it is women who were living with both parents; for marital and family status, it is ever-married women with children (never-married women with children are excluded from the universe).

[c] Or head of household if respondent did not live with father at age 15.

hand, between women in their late thirties and those in their early forties. Other things equal, women whose formative years were spent in rural areas and also those who grew up in "broken" homes have suffered educational disadvantages. The negative coefficient for rural residence at age 15 is three-tenths of a year. Relative to women who as teenagers lived with both parents, those without one or both parents in the household completed about half a year less school.

Finally, it is of interest to observe that women who had never married (and had borne no children) had a highly significant 1.3 year educational advantage over women who married and had children. On the other hand, the difference between married women with and without children is much smaller and not statistically significant. These relationships suggest that the educational disadvantage of married women relative to the never-married cannot be explained primarily by the necessity of dropping out of school when children arrive. It may reflect discontinuation of education in order to assume the role of housewife. However, it may also simply reflect differences in career aspirations. That is, at least in the generation under consideration, girls in their teens with strong orientations toward careers in the labor market are probably more likely than other girls to have pursued additional education and are probably also less likely ever to have married.

Occupational Status of First Job

The data in Table 3.6 are aimed essentially at answering two major questions. First, do the factors that determine the educational attainment of women exercise additional effects upon initial occupational assignment, or is their influence on occupational assignment indirect, operating only through their effect on education? Second, is the racial difference in occupational status of the jobs respondents took after leaving school explained by the difference between whites and blacks in number of years of schooling and/or other characteristics that we have been able to measure, or is the evidence consistent with the hypothesis of labor market discrimination?

By and large, the answer to the first of these questions is that the family background factors influence initial occupational assignment almost exclusively--although not entirely--via their effect upon education. When respondent's education entered the regression at the third step, the adjusted R^2 rose from 7 percent to 50 percent, and the addition of the remaining variables raised the adjusted R^2 only 2 additional percentage points. Nevertheless, the evidence suggests that even when respondents' education is controlled, those whose mothers were college graduates entered higher status jobs after leaving school than those women whose mothers had less education. It might also be mentioned that prior to the entry of mother's education into the regression, the coefficient for the college-graduate category of father was also significant at the 5 percent level. The high collinearity of the two variables prevents one from assessing their independent effects. There is also some evidence that father's occupation makes a difference, although in this case the pattern

c Regression coefficient indicates the deviation in occupational status of the indicated category of respondents from the reference group, i.e., the omitted category. See footnote b, Table 3.5. For continuous explanatory variables (e.g., respondents' educational attainment) regression coefficient indicates its average change in Bose Index associated with a one unit change in the explanatory variable (e.g., one year in the case of education).
d Or head of household if respondent did not live with father at age 15.

is perplexing. Women whose fathers were in occupations in the lowest status category took first jobs significantly lower on the occupational ladder than the daughters of men in the intermediate category. However, the coefficient for the highest status category is also negative. Neither coming from a rural background nor growing up in a broken home has an effect on occupational assignment over and above that which occurs through an influence on education.

With respect to the second question posed above, it is clear that the racial difference in initial occupational assignment does not melt away when respondent's education and other explanatory variables are introduced. The 12-point gross differential between blacks and whites in the Bose Index of first job declines only to 8.5 points when other factors are controlled, and over 80 percent of this drop is attributable to the introduction of the variable measuring respondent's education. While this obviously is not conclusive evidence of the existence of labor market discrimination when the women under consideration were leaving school, it is entirely consistent with that interpretation.

The behavior of the marital status variable is intriguing. Women who in 1967 were classified as "ever-married without children" had significantly higher-status first jobs than "ever-married women with children," suggesting that the freedom from the actual care of or the expectation of children permitted the former group to seek and get better jobs than the latter, other things being equal. The trouble with this explanation, however, is that it seems at first blush to be at odds with the fact that the never-married women--who are also without children--took first jobs that were not significantly different from those taken by women who were (or became) mothers, and that, by implication, had lower status than those of the ever-married women with no children. This seems especially strange in view of the career-orientation hypothesis that has previously been offered to explain the higher educational attainment of the never-married group.

On reflection, however, the paradox disappears, especially in light of data contained in Table 3.7 which show that the never-married improved their occupational status between first job and 1967 job to a greater extent than the other two marital status groups even when all other relevant factors are controlled. What all this may mean is that the never-married, precisely because of their stronger career orientations, were more likely than the other groups to take initial jobs with above-average opportunities for on-the-job training but with lower initial status than other jobs without such opportunities for which they could have qualified.

Occupational Mobility: First Job to 1967 Job

The regression results reported in Table 3.7 may be viewed as indicating the determinants of relative vertical occupational movement between first and 1967 job, since the Bose Index of 1967 job is the dependent variable while the Bose Index of initial job is included as a

control variable. That is, a positive coefficient for a particular explanatory variable (other than Bose Index of initial job) suggests that women with that characteristic tended to improve their occupational position relative to that of other women over the period. In interpreting the regression coefficients, it is useful to keep in mind that the mean value of the Bose Index for 1967 was less than two points higher than that for initial job--47.1 versus 45.4.

To begin with, it is hardly surprising that the single best predictor of occupational level in 1967 is the woman's occupational status in her first job. When that variable entered the regression at the second step, the adjusted R^2 rose from 4 percent to 47 percent. The addition of all the remaining variables increased the explained variance by only 8 percentage points. Number of years of school completed by the respondent, in addition to being the principal determinant of the occupational level of her first job, exerts a (direct) influence on 1967 job that is independent of initial occupational status. Controlling for initial level, each year of education adds an average of two points to the Bose Index of 1967 occupation. Similarly, women who had received formal training outside the regular school system prior to 1967 were, other things equal, more likely to have moved up the occupational ladder by 1967 than women without such training.

The construction of the health variable perhaps requires a word of clarification. The reference group consists of women who in 1967 reported no health problems affecting work and who rated their health as "excellent." The categories that are compared with this group are those without health problems who rated their health as "good," similar women who rated their health as "fair" or "poor," and three categories of women who reported health problems affecting work ranked according to the duration of those problems as of 1967. Although the pattern is not entirely regular, the coefficients for two of the three categories of women with work-limiting problems are negative and statistically significant. We conclude that the health of a woman has an effect on the likelihood of upward or downward occupational mobility. It must be kept in mind that the total influence of health in this regard is doubtless greater than what these data show, since the investigation excludes women whose health in 1967 precluded their employment.

The work experience variable and the tenure variable were included to test the hypothesis that general and firm-specific work experience would be positively related to the likelihood of vertical mobility. The tenure variable--that is, length of service with the 1967 employer--was expected to be related to occupational level for institutional reasons as well, e.g., the influence of seniority. The work experience variable, expressed in continuous form, measures the number of years since leaving school in which the woman worked six months or longer. While neither of these variables is consistently significant, in view of the interrelationship between them we are reluctant to reject the hypothesis that each is actually related to the likelihood of upward movement.[25]

We have reserved for the end a discussion of the black-white difference in 1967 occupational status, for the behavior of the race variable has to be evaluated in the light of the effects on occupational level of the other explanatory variables. First, it is to be noted that controlling for all of the other explanatory variables, there remains a statistically significant 2.2 point difference in Bose Index in favor of the whites. This means that, net of other factors, the occupational position of black women relative to white women deteriorated over the period between their first jobs and the time of our initial survey of the sample in 1967, a result comparable to that documented by Blau and Duncan in their study of men.[26]

Occupational Mobility: 1967 to 1972

Determinants of occupational status in 1972 are analyzed in Table 3.8 in a manner analogous to that employed in analyzing 1967 status. That is, the Bose Index for the 1972 occupation of respondents is the dependent variable and the Bose Index of 1967 job is used as a control variable. Again, the base year level of occupation is the best single predictor of occupational status at the end of the period and, because the period is so much shorter in this case, it accounts for a much larger portion of the total variance than when the status of 1967 job was the dependent variable. When the 1967 Bose Index was introduced at the second step, the R^2 rose from 4 percent to 70 percent, and the additional variables caused the explained variance to rise only five more points.

The variables relating to experience between 1967 and 1972 fail to show a statistically significant relationship with vertical movement. It is interesting, on the other hand, that experiences that antedated 1967, and whose effects are therefore presumably reflected in the base year value of the Bose Index, continue to manifest an influence on vertical occupational movement over the five-year period. For example, better educated respondents continue to improve their relative positions, and the same is apparently true of women with pre-1967 training, although the variable does not quite achieve significance at the 5 percent level. Moreover, there is also a positive relationship between pre-1967 work experience and improvement in relative occupational position.

---

[25] It may be noted that prior to the introduction of the tenure variable into the regression, the positive coefficient of the work experience variable was significant at the 1 percent level (1-tail test).

d Reference group consists of respondents with no health problems affecting work in either year.

e Number of years in which respondent worked six months or more.

Surprisingly, despite the Civil Rights Movement, the trend in the racial differential that has already been documented for the period between first job and 1967 job appears to have continued over the five-year period from 1967 to 1972. That is, the relative occupational position of black women in this age category appears to have deteriorated further. A major portion of the gross differential of 9 points on the Bose Index in favor of whites disappeared when the Bose Index for 1967 was introduced into the regression, but a 2.2 point differential remains even after all the additional variables are included, a difference that is significant at the 1 percent level. At first blush, these results may seem to be at odds with evidence of a diminishing black-white differential in occupational status that other studies have found.[27] However, it must be kept in mind that our sample consists of women in their thirties and forties who were employed in both 1967 and 1972. It would appear that black women in this age category who were more or less continuously employed did not fare as well relative to whites as cross-sectional data for the entire labor force would suggest.

III SUMMARY AND CONCLUSIONS

This chapter has had two interrelated objectives: (1) to ascertain what characteristics of women in their thirties and forties are associated with their having pursued labor market careers and (2) to analyze the determinants of the occupational status of such women at various points in their working lives.

Determinants of Career Status

To be classified as a "career" woman for purposes of this study a woman must have manifested a relatively strong attachment to the labor market and must also have served either in a single occupation or in a group of related occupations. By these criteria only 7 percent of women in their thirties and forties who have ever married and borne children have established careers. In contrast, about half of all childless never-married women have had careers, as have about one-third of ever-married women without children.

Among married women living with their husbands, a number of marital and family characteristics are significantly related to the likelihood of having pursued a career. For example, other things equal, women whose husbands have had health problems are more likely than other women to have established careers. The number and spacing of children have important effects on the likelihood of careers. In multiple-child families, the longer the average number of years between births, the greater the likelihood of career status, perhaps reflecting the greater possibility of using older siblings to provide child care. Finally, attitudinal factors apparently exert an influence. There is a very substantial relation between a woman's perception of her husband's attitude toward her working and the likelihood that she will have established a career. Moreover, her own attitude toward the propriety of labor market activity by married women with children has a significant relationship with whether she has pursued a career.

---

[27] See, for example, Freeman (1973), p. 70.

Irrespective of the characteristics of her husband and family, the more education a woman has had the more likely she is to have pursued a career. Moreover, type of education also plays a role; women who have pursued professional programs at the university level are more likely than other university graduates to have had careers. Participation in lengthy training programs outside of regular school also increases the likelihood of a career, as does possession of a certificate or license for the practice of a trade or profession.

Finally, two factors relating to the woman's early home environment are related to the likelihood that she will subsequently establish a career. Women from rural areas and small cities are more likely than those from large cities to have established careers. Whether her mother worked when the respondent was a teenager is also influential; women who had working mothers are more likely than others to have established careers for themselves.

Occupational Status and Occupational Mobility

The single most important influence on the occupational level a woman occupies is the amount of education she has obtained. Our analysis of occupational status, therefore, has begun with an investigation of the determinants of educational attainment and has then focused on the factors affecting the relative occupational status of the woman at three points in her employment history: after leaving school, in 1967 when our surveys began, and in 1972 at the end of the five-year period under investigation.

Educational attainment

The educational attainment and occupational status of her father and the educational attainment of her mother each have an independent influence on the number of years of schooling a woman obtains. All three of these measures are dimensions of the socioeconomic status of her family of orientation. The significant effect of mother's education may also reflect the influence of an educational role model. In addition to these dominant influences, other factors in a woman's background affect the amount of education she gets. Specifically, coming from a broken home or living in a rural area as a teenager has a depressing effect on the amount of education a woman obtains. A woman who by her thirties or forties has not married--other things equal--enjoys a substantial educational advantage over her married counterparts. Although the gross difference in educational attainment between white and black women averages 0.8 years, virtually all of this appears to be explained by differences between the two groups in the characteristics that are related to educational attainment.

Occupational status: first job The position a woman achieves in the occupational hierarchy when she first enters the labor market is substantially determined by the amount of education she has received. Thus, the influence on occupational status of the socioeconomic status of her family of orientation is almost exclusively indirect, operating through its effect on her educational attainment. Nevertheless, there appears also to be a slight direct effect. Specifically, having a mother with a college degree improves the occupational status of a woman even controlling for her own education. The racial difference in occupational status of first job remains when other factors are controlled, suggesting the presence of labor market discrimination when this cohort of women first sought work.

Occupational mobility: first job to 1967 Whether a woman changed her relative position in the occupational hierarchy between her first job and the time she was interviewed in 1967 depends upon a number of factors. Educational attainment, the receipt of training outside the regular school system, and good health are all positively associated with upward movement. Being black, on the other hand, bears a negative relationship with upward movement. In other words, despite the lower positions in which they started their careers, black women in this age group had by 1967 suffered a further deterioration in occupational status relative to white women.

Occupational mobility: 1967 to 1972 None of our measures relating to the five-year period between 1967 and 1972 bears a significant relationship to occupational mobility over that period. On the other hand, factors relating to the period prior to 1967 continued to exert an influence. Better-educated women improved their relative positions during this five-year period as they had previously. Pre-1967 work experience also continued to receive a return in the form of upward movement. Being black continued to create a relative disadvantage; the occupational position of black women relative to white in our sample was lower in 1972 than in 1967.

Conclusion

Whether it is desirable for a married woman with children to have a labor market career is a value-laden question on which there is doubtless disagreement among women (and men) of good will. The evidence presented in this chapter indicates that relatively few such women who are currently in their late thirties and their forties have pursued careers. However, given the strong independent influence that attitudes of both husband and wife appear to exercise on the likelihood that a woman will have pursued a career, there is clearly the possibility of substantial increases in the proportion of career women as attitudes on the "proper" role of women continue to change over time.

The evidence relating to the determinants of the occupational status of working women is from some points of view encouraging. The occupational position of women in the labor market is for the most part the result not of haphazard forces but of precisely those factors that one should expect to be influential and, to a considerable extent, those that operate for men. Indeed, although no evidence on this question has been presented here, the same data base has been used in conjunction with a data set for men to demonstrate that the process of status achievement is essentially the same for women as for men.[28]

Marital status, however, is not only strongly related to the likelihood of a woman's establishing a career, but also has a bearing on her occupational status that is independent of the amount of time she has spent in the labor force. To begin with, women who marry and have children have obtained less education than never-married women with similar backgrounds. Controlling for other characteristics, their initial jobs have status levels no different from those held by never-married women, but they are less likely than the never-married to move up the occupational ladder over time. These findings do not necessarily mean that marriage impedes upward mobility for women with given degrees of attachment to the labor force; the evidence is equally consistent with the hypothesis that a selective process operates such that women with strong career orientations are less likely to marry than those who wish to emphasize other roles.

One aspect of the evidence on occupational status is disheartening. Controlling for all other factors that we have been able to measure, the occupations taken at the beginning of their careers by blacks now in their thirties and forties were lower in the status hierarchy than those taken by whites with comparable characteristics. Moreover, the relative disparity in this respect widened over their careers--even during the half decade between 1967 and 1972. This is an additional reminder that the rather impressive effort in recent years in combatting racial discrimination in the labor market still leaves something to be desired.

---

APPENDIX TO CHAPTER III

METHOD OF CODING CAREER STATUS

As has been explained in the text, in order to be classified as a "career" woman, a respondent must have (1) had more than a specified minimum amount of employment since leaving school and (2) had a consistent pattern of occupational assignment. The first of these criteria is completely quantitative and involves no judgment once the criterion is specified. The second criterion, however, is substantially qualitative and is therefore both more difficult to specify and more difficult to apply.

After a careful examination of a random sample of work histories, the following set of guidelines was developed for the careers:

1. If a woman is in the same three-digit occupation in all time periods, she is a career woman.

2. If a woman is in clearly related three-digit occupations in all time periods, she is a career woman. For related occupations, see attached "families of occupations."[1]

3. If a woman is in a series of occupations that are not necessarily closely related but which reflect a movement up the occupational ladder, she is a career woman. Examples: practical nurse to professional nurse; bookkeeper to accountant; clerical n.e.c. to office manager n.e.c.

4. If a woman is in the same three-digit occupation in every time period except for one survey week other than 1972, she is a career woman.

5. If a woman is in the same three-digit occupation in every time period except survey week 1972 she is a possible career woman.

6. When a woman is in the same or related occupation in all periods except the first, she is designated as a career woman unless the period of time in that first occupation amounts to one-third or more of her total recorded work experience.

---

[1] See pp. 91-92, below.

7. For ever-married women with children, exactly the same rule as number 6 applies with respect to occupation between marriage and birth of first child and with respect to the job between birth of child and 1967.

8. It is recognized that even with the foregoing guidelines, there will be doubtful cases. Try to code each woman as "career" or "noncareer." However, if you are really undecided, use a third category, "possible career."

9. Where any piece of information is missing that could make a difference according to the foregoing rules, the respondent should be coded NA on this variable.

These guidelines were explained and illustrated in a group session to three graduate students who had had extensive experience with the data. They were then asked to code the work histories independently and to analyze the extent of their disagreement.

In all, there were 581 respondents whose attachment to the labor force was sufficiently extensive to meet the first criterion of having had a career, and it was only this subset of the sample whose patterns of occupational assignment were examined. In slightly under a fifth of these cases the woman was in the same three-digit occupation in all time periods, so that classifying her as a "career" woman was completely straightforward. In an additional 54 percent of the cases the three coders were unanimous in their judgments. Finally, there was another 12 percent of the cases in which two of the coders were agreed and the judgment of the third was not very different, as where two classified a woman as "career" and the third classified her as "possible career" or where two designated a woman as "possible career" and the third called her "noncareer." In these instances, the code assigned by the majority was the one used.

Thus, in only 16 percent of the cases was there a substantial disagreement among the coders as to whether a woman should be classified as "career" or "noncareer." These cases were reviewed and discussed by the three coders jointly, and a resolution of each disagreement was achieved. It was their unanimous judgment that most of the initial disagreements resulted from an oversight on the part of one or another of the coders; that is, their experience led them to believe that careful and literal application of the guidelines would have allowed all but a very small number of the cases to be coded unambiguously and confidently. In the analysis of the data, the small number of cases coded as "possible career" were combined with the "noncareer."

Career Codes for Illustrative Cases Involving Ever-Married Women with Children

Datum	Case 1	Case 2	Case 3	Case 4
Age of respondent	42	37	36	30
Years of school completed	10	12	16	6
Period between school and marriage				
Occupation[a]	typist	medical technician	teacher, secondary	charwoman
Years worked[b]	2	4	1	2
Years elapsed	7	4	1	8
Period between marriage and first child				
Occupation[a]	na	medical technician	secretary	na
Years worked[b]	na	1	3	na
Years elapsed	na	1	4	na
Period between first child and 1967 survey				
Occupation[a]	waitress	medical technician	teacher, elementary	unpaid farm laborer
Years worked[b]	7	7	6	10
Years elapsed	20	13	11	10
Tenure with 1967 employer (years)	3	0	6	10
Occupation in survey week of:				
1967	hairdresser	secretary	teacher, elementary	unpaid farm laborer
1969	hairdresser	practical nurse	teacher, elementary	unpaid farm laborer
1971	steward	med/dent assistant	teacher, elementary	unpaid farm laborer
1972	mgr.,n.e.c.	nurse	teacher, elementary	unpaid farm laborer
Comparative job status, 1967-1972[c]	different	different	same	same

[a] Longest occupational assignment of longest job in period.

[b] Number of years served in longest job of period.

[c] Indicates whether respondent worked for same employer in 1972 as in 1967.

Families of Occupations

I

802 - Housekeepers, private household
804 - Private household workers (n.e.c.)
821 - Boarding and lodging-house keepers
823 - Chambermaids and maids, except private household
824 - Charwomen and cleaners
832 - Housekeepers and stewards, except private household
834 - Janitors and sextons

II

102 - Farm and home management advisers
111 - Librarians
120 - Musicians and music teachers
180 - Sports instructors
182 - Elementary teachers
183 - Secondary teachers
184 - Teachers (n.e.c.)

III

250 - Buyers and department heads, store
382 - Demonstrators
383 - Hucksters and peddlers
394 - Salesmen and sales clerks (n.e.c.)

IV

150 - Professional nurses
151 - Student professional nurses
185 - Medical and dental technicians
303 - Physicians' and dentists' office attendants
810 - Attendants, hospitals and other institutions
842 - Practical nurses

V

825 - Cooks
830 - Counter and fountain workers
835 - Kitchen workers (n.e.c.), except private household
875 - Waiters and waitresses

VI

651 - Dressmakers and seamstresses, except factory
705 - Sewers and stitchers, manufacturing

105

VII

902 - Farm laborers, wage workers
903 - Farm laborers, unpaid family workers

VIII

000 - Accountants
305 - Bank tellers
310 - Bookkeepers
312 - Cashiers
325 - Office machine operators
333 - Payroll and timekeeping clerks
370 - Clerical and kindred workers (n.e.c.)

IX

341 - Receptionists
342 - Secretaries
345 - Stenographers
360 - Typists
370 - Clerical and kindred workers (n.e.c.)

X

370 - Clerical and kindred workers (n.e.c.)
Any clerical occupation

XI

775 - Operatives and kindred workers (n.e.c.)
Any operative occupation

XII

290 - Managers, officials and proprietors (n.e.c.)
310 - Bookkeepers
342 - Secretaries
370 - Clerical and kindred workers (n.e.c.)
394 - Salesmen and sales clerks (n.e.c.)

XIII

430 - Foremen (n.e.c.)
Any operative category

XIV

815 - Bartenders
875 - Waiters and waitresses

CHAPTER IV

THE INFLUENCE OF WORK EXPERIENCE AND TYPICALITY OF OCCUPATIONAL ASSIGNMENT ON WOMEN'S EARNINGS

Carol L. Jusenius*

This chapter examines the wage position of women in the American labor force. Its objective is to analyze the impact on women's average hourly earnings of both their levels of human capital and the characteristics of the labor market in which they operate. Within these two broad categories of factors are a myriad of very specific ones. Many have been well researched and their relationship to wage rates has been fully established, e.g., education and region of residence. Others have appeared only recently in the literature on women's earnings, and the evidence of their significance to wage determination is less complete, e.g., historical labor force experience,[1] and occupational segregation (or sex-labelling of occupations).[2]

While the analysis here includes many of these factors, its unique aspect lies in the treatment accorded to two factors about which knowledge is least complete. First, the circumstances under which work experience is an important influence on women's earnings are explored by including a measure of the skill requirement of the occupations in which they are found. In this context the question is whether--all other things being equal--occupations differ in the extent to which they offer rewards for accumulating human capital, specifically, for continuous labor market exposure. The hypothesis is that while continuous work experience is significant in determining wages of women in high skill occupations, it is not significant in determining the wages of women in low skill occupations, _ceteris paribus_. Second, the research tests the impact on wages of sex-labelling of occupations. The expectation is that, all other things being equal, women in "typically female" occupations receive lower earnings than women in "typically male" occupations.

---

*The author wishes to thank B. von Rabenau for his comments on earlier drafts and P. Brito and R. Reichenbach for their excellent research assistance.

[1] See Mincer and Polachek (1974); Sandell and Shapiro (1975); and Suter and Miller (1973).

[2] See Bergmann (1974); Edgeworth (1922); Fawcett (1918); Jusenius and Shortlidge (1975); Kohen and Roderick (1973); Oppenheimer (1973); and Waldman and McEaddy (1974).

The logic underlying these two hypotheses is discussed in the following two sections. Section I describes the measure "skill requirement" and presents the reasoning behind its use as a control in attempts to measure the true effects on wages of human capital factors. Section II discusses the importance of controlling for the skill requirement of an occupation in attempts to isolate the impact on wages of an occupation's sex-label. Section III presents the empirical model and its results. The conclusions are presented in the final section.

I SKILL REQUIREMENT AND HUMAN CAPITAL

It has long been recognized that individuals vary in their stocks of accumulated human capital. Workers differ in the amount of formal education completed, in the number and types of formal training programs taken, and in the amount of informal, on-the-job training. It is also well known that greater economic rewards accrue to those who have invested more heavily in themselves.

A direct measure of "extent of lifetime work experience" is the latest addition to the list of human capital variables employed in economic research on women's earnings. Put simply, the argument is that individuals (primarily married women with children) who leave the labor force for a period of time experience a deterioration in the level of their skills relative to those workers (primarily men and single women) who remain in the labor force continuously. As a result, the former have a lower effective level of human capital than the latter and hence receive lower wages.[3]

Occupation's Skill Requirement

But the issue is not so clear-cut: the extent to which human capital factors, including lifetime work experience, are likely to be of importance to wages may well depend upon the occupation in which the individual is found. Specifically, the impact of education and training on wages may depend upon the length of time necessary to learn the skills required by that occupation. Also, the importance of previous work experience is likely to vary according to the length of time necessary to relearn the skills if a worker has left the labor force.

To illustrate--consider two women, age 40, who re-enter the labor force after a 15-year absence. The first becomes a waitress. Because relatively few skills are required in this occupation, the educational requirements are likely to be low, and any job-specific training required would be of short duration. Moreover, in the absence of other limitations, it is difficult to imagine that this woman would receive substantially below-average wages in her occupational category because of skill-obsolescence growing out of discontinuities in her employment history.

---

[3] A rigorous formulation of this argument is found in Mincer and Polachek (1974).

In contrast, a second woman wishes to re-enter the labor force as a nurse. Since entrance into this occupation requires acquisition of a large body of specialized knowledge, a lengthy initial training process is essential. Furthermore, it is probable that a nurse who was not in the labor force continuously would experience a deterioration in her skills. This woman might be required to take a lengthy retraining program if she wished to meet the standards of performance maintained by those who have been continuously employed and to receive equivalent wages.

This description of the likely experiences of these two women illustrates the earlier statement that the importance of human capital factors to wage determination is likely to vary among occupations. It also suggests that in any analysis of the effect of employment experience on earnings, it is desirable to classify occupations by the level of skills they require of their incumbents.

A Classification Scheme

In such a categorization scheme, human capital factors would play a greater (or lesser) role in explaining wages depending upon: (1) the extent to which the present state of technology mandates a lengthy training program to enter the occupation; (2) the extent to which technological change in the occupation has occurred in recent years and has made previous training and experience obsolete; and (3) the extent to which a worker's own skills could deteriorate through nonuse.[4]

---

[4] An abbreviated, but analogous, description of variations in the skill requirements of occupations is found in Mangum and Snedecker (1974), p. 85. It should be noted that the empirical analysis of work experience will test only the effect of the first and third factors listed above. We have no measure of the extent to which technological change has occurred in specific occupations over the life spans of the women in our sample. It is worth mentioning, however, that technological change may also make obsolete the previous training of workers continuously employed. There seems to be no *a priori* reason to believe that *all* workers continuously employed "keep up" with technological advances in their occupations. Furthermore, while it is frequently assumed that technological change serves to *increase* the level of sophistication necessary to perform the relevant job tasks, it is possible (and indeed has happened historically) that technological advances serve to *reduce* the necessary level of skills. In this case, workers who had left the labor force for a period of time might be no worse off in terms of their knowledge and skill level than those who had been employed continuously.

119

Specifically, at the one extreme would be those sets of jobs for which few skills are required and the length of time necessary to learn (or to relearn) them is short. Within this set it is unlikely that educational attainment would be of critical importance or that continuous work experience would add substantially to a worker's productivity.[5] For example, all other things being equal, it is anticipated that there would be little, if any, wage differential between an elevator operator with one year of experience prior to joining her current employer and another with 15 years of experience prior to joining her current employer.

At the other extreme would be those occupations which require a specific, highly technical set of skills (such as any of the professions). Acquisition of these skills involves a lengthy training process, and maintenance of the necessary level of skills requires employment. A failure to work continuously may result in a deterioration of a worker's skills relative to those who have been employed continuously.[6] In other words, in contrast to the previous set of occupations, wages in this group would be influenced by both education and the amount of work experience.

It is important to note that in this classification scheme we are explicitly differentiating between the set of skills required by occupations and the set of skills (or levels of human capital) embodied in workers. In other words, it is being suggested that two analogous skill distributions exist: human capital among workers and skill requirements among occupations.[7]

Human Capital and Skill Requirement

While a worker's stock of human capital, particularly education, is frequently taken as a proxy for the skill requirement of the occupation in which the worker is found, this does not appear to be appropriate. It seems quite realistic to suppose that the distribution of skills--both type and level--required by occupations is not identical to the distribution of skills--both type and level--found among their incumbents.

---

[5] Essentially the same point is made for the experience of black men in Bergmann (1969) and for the experiences of women in Bergmann (1973). See also Kalachek and Raines (1975).

[6] Because the body of knowledge required for adequate job performance is also likely to be growing or changing over time due to technological progress, this is a case in which the level of human capital an employer deems acceptable at one point in time may be less than that which is acceptable at a later date.

[7] A similar conceptual distinction is made in Parnes (1962).

For example, anticipating a high level of demand for a particular type of labor, a woman may educate herself to a given level and along certain lines. In later years, however, the demand for this type of labor may decline, resulting in few opportunities for employment. As a consequence, she may be employed in another occupation--one which may or may not require the full utilization of her previously acquired education and training. (An illustration is provided by individuals trained as school teachers who have been forced by demand conditions to move into other occupations.) Moreover, among women in particular, it is not uncommon to find occupations, e.g., secretarial work, in which there are substantial numbers of workers with college degrees as well as substantial numbers with high school diplomas.[8]

The point is that while accumulated human capital measures the actual skills of a worker, the skill requirement of an occupation is a measure of the level of skills necessary to perform adequately a given set of job tasks. Each occupation may be thought of as having a minimum level of required skills and it is possible for an incumbent of an occupation to embody more human capital than is minimally required.[9]

Clearly a worker whose own skills lie below the minimum level required by the occupation cannot adequately perform the job tasks of

---

[8] This is not meant to imply that education has no separate effect on wages. Indeed, controlling for other factors, it is quite conceivable that a secretary with 16 years of schooling is more productive (and hence earns higher wages) than one with 12 years of schooling. Moreover, it is also possible that these two secretaries would be in positions of different grades within any given firm and that further disaggregation of an occupational classification scheme (e.g., 6-digit rather than 3-digit) would show this to be the case.

[9] It is reasonable to expect within the category of jobs which require many sophisticated skills there would be a relatively high correlation between the skills necessary to perform the job tasks and the actual skill level of the workers. In this case, because the level of necessary skills is high, the theoretical range of variation in the distribution of skills among workers would be relatively small, ranging from a baccalaureate to a doctoral degree, for example. However, in the case of low-skill jobs (domestic service, for instance) such a correlation between necessary and actual skills is less likely to occur. That is, because the minimally necessary level of skills is low, the theoretical range of variation in the human capital backgrounds of the incumbents is considerable (from an elementary school education to a college degree, for example). See Table 4.5 for the simple correlations between skill requirement and education.

114

this occupation, i.e., cannot enter it. Another worker whose own skills lie above the minimum level required by the occupation receives additional rewards for embodying more skills than are minimally required.

The question is: do returns to additional units of human capital vary across occupations depending on the level of skills they require? Alternatively stated, do women in occupations with a low skill requirement receive lower wages than women in high skill occupations because (1) they have lower stocks of human capital (e.g., fewer years of schooling and/or experience); (2) they receive lower marginal returns for whatever amount of human capital they have accumulated (e.g., a lower payoff to each additional year of schooling and/or experience); or (3) they have lower stocks of human capital and receive lower returns for each additional unit of human capital? The implication of these questions for empirical work is that a test of the separate effects on earnings of education, training, and labor force experience must include a control for an occupation's skill requirement.

Such a control can be instituted through a measure of the length of time normally required to become proficient in an occupation--the shorter the period of time required, the lower the occupation's skill requirement. While certainly the exact amount of training is difficult to ascertain and will in fact vary among individuals, it is possible to rank occupations in terms of the relative amount of time necessary to learn the relevant set of skills.[10]

For the reasons outlined above, a measure of an occupation's skill requirement is critical to tests of the impact of human capital factors on women's wages. Yet this is only one reason for including such a control. As we shall now see, it is also essential for a valid test of the effects of occupational segregation on women's wages.

II SKILL REQUIREMENT AND OCCUPATIONAL SEGREGATION

As was noted at the outset, occupational segregation is a second issue which has recently received wide attention in discussions of women's earnings. It has been found that individuals in "female-intensive" industries earn a lower weekly rate of pay than individuals in "male-intensive" industries. It has also been found that women in typically female occupations earn a lower hourly rate of pay than women in typically male occupations.[11]

---

[10] This ranking system is based on the "Specific Vocational Preparation" index found in the Dictionary of Occupational Titles. The precise manner in which it was constructed is described in the Appendix to this chapter.

[11] Waldman and McEaddy (1974); Jusenius and Shortlidge (1975); and Kohen and Roderick (1973). It should be noted that the first two of

Yet sex segregation in the occupational distribution by itself does not necessarily imply lower wages for either men or women. However, segregation in conjunction with some other characteristic(s)--associated either with women or with occupations--could help to explain women's wage position. For this reason, research on the subject of occupational segregation has attempted to ascertain why segregation seems to result in lower wages for women rather than for men.

Some authors have suggested that sex segregation in the occupational distribution has resulted in an "overcrowding" of women in a select number of occupations and that it is the interplay of a relatively low demand for women workers with a relatively high level of supply that has led to their wage position.[12] Others have argued that women predominate in occupations which have comparatively low skill requirements and that it is the low skill level (in conjunction with an overcrowding phenomenon) which accounts for their relatively low earnings.[13]

Any attempt to measure the "true" effects of sex-typing of occupations on women's wages must disentangle these explanations. To show only that women in typically female jobs earn less than women in typically male jobs may mean only that women tend to be concentrated in low-skill occupations which might be expected to pay lower wages. Moreover, to the extent that this is the case, it could also be argued that the presence of women in these low-skill occupations reflects simply their actual or expected interruptions in employment. On the other hand, such an explanation would not be consistent with a finding that typically female occupations pay lower wages than typically male

---

these studies employed only tabular analysis which in the case of Waldman and McEaddy did not include controls for human capital factors. Jusenius and Shortlidge controlled only for educational attainment (and race). The research of Kohen and Roderick used multivariate techniques.

[12] See Bergmann (1975). See also Edgeworth (1922) and Fawcett (1918).

[13] Sawhill (1973). It should be noted that segregation and overcrowding can occur because of the tastes of employers (as in Bergmann 1974) or because of the tastes of women themselves (as might be suggested by the human capital school). [See Blau and Jusenius (1975) for an elaboration of this point.] In this chapter no attempt is made to locate the source of those "tastes" which may be the cause of segregation. Here we shall only be testing the effect on wages of an occupation's sex-label. While some of the empirical results may be consistent with an overcrowding phenomenon, they do not prove its existence.

occupations *within* skill categories. Thus it becomes essential to control for *skill* level of occupations in examining the effect on earnings of being in "female" as opposed to "male" occupations.[14]

An examination of Table 4.1, which presents the distribution of occupations by their skill requirement and their sex-label, indicates that proportionately more "female" than "male" occupations are found at the lower end of the spectrum of skill requirement. However, both male and female jobs are found in every skill-requirement category: typically female occupations, like typically male ones, vary in the amount of skills they require of their incumbents. Differentiation between (1) the effect of the skill level required by typically male and typically female occupations and (2) the effect of an occupation's sex-label controlling for its skill requirement becomes not only possible, but also essential to the entire argument regarding the impact on women's earnings of sex-typing of occupations in the labor market.

III EMPIRICAL TEST

To test the arguments set forth in the previous sections, multiple regressions were run for the universe of women who were employed as wage or salary workers in 1972. The dependent variable was the natural log of the women's 1972 average hourly earnings, permitting the coefficients to be interpreted as the percentage effects of changes in the independent variables on the wage rate.

Specification of the Model

The basic equation of the empirical model was formulated as:

$$\ln \text{AHE} = \alpha_0 + \alpha_1 \text{ EDUCATION} + \alpha_2 \text{ EVER TRAIN} + \sum_{i=1}^{3} \alpha_{3i} \text{ EXPERIENCE}_i - \alpha_4 \text{ FEMOCC} + \sum_{j=1}^{3} \alpha_{5j} \text{ SKILL}_j + \sum_{k=1}^{7} \alpha_{6k} Z_k$$

---

[14] Because we are exploring the possibility of a wage differential between *women* in women's jobs and *women* in men's jobs, this may be considered a conservative test of the effects on women's earnings of an occupation's sex-label. That is, if women and men operated in essentially different labor markets, it is possible that the sex-typing of a woman's occupation would have no independent effect on her wages. See Madden (1973) for a discussion of this issue in terms of differing supply-elasticities of men and women.

Table 4.1 Percentage Distribution of Occupations[a], by Skill Requirement and Sex-Label

Skill requirement[b] / Sex-label[c]	Number of occupations	Total percent	Low skill	Intermediate skill	High skill
Typically male	213	100	16.9	15.0	68.9
Typically female	66	100	33.9	29.3	36.9

[a] Occupations are the three-digit categories of the Bureau of the Census classification system.

[b] The low skill category consists of those occupations for which the length of time needed to learn the relevant job tasks ranges from a short demonstration to a maximum of three months. The occupations within this set which embody the greatest skill requirements are, for example, elevator operators, taxicab drivers (typically male jobs) and kitchen workers (a typically female job).

The second skill category is comprised of those occupations which require from over three months to one year of training. Included here are, for example, typists, office machine operators (typically female jobs), and shipping and receiving clerks (a typically male job).

In sharp contrast to these two sets of occupations is the high skill category, for which over a year is necessary to become proficient in the job tasks, e.g., nursing and teaching.

See the Appendix to this chapter for the precise definition of the variable "skill requirement" and for the way in which it was created.

[c] Occupations are defined as typically male or typically female by a comparison of the percentage of the labor force in 1970 which was female with the percentage of an occupation's incumbents who were female. See Appendix to this chapter for a more extended discussion of the manner in which the variable was created.

where $\sum_{k=1}^{7} \alpha_{6k} Z_k$ represents the set of variables which are thought of as controls: race; health; region of residence; full or part-time worker (measured by the number of hours usually worked per week); private or public employee; presence of collective bargaining; and size of local labor market. The specification of these "control" variables and their expected signs are presented in Table 4.2 below.

The variables representing the human capital factors which are of special interest to this model are shown separately in the above equation. Education (EDUCATION) is a continuous variable, measured by the highest grade a woman completed (0 through 18 years of schooling). EVER TRAIN is a dummy variable which represents the completion of a training program at some point between the year the woman completed her formal schooling and 1972. The reference group for this variable consists of women who started, but never completed a program as well as those who never participated in a program.

There are three measures of work experience. TENURE is a direct measure (obtained retrospectively) of the number of years a woman has been with her 1972 employer. YEARS WORKED is a direct measure (also obtained retrospectively) of the number of years a woman worked at least six months between the year she left school and 1967. The third work experience variable, WEEKS WORKED, measures the number of weeks a woman was employed between 1968 and 1972.[15] Because tenure has been included as a separate independent variable, the coefficients of these latter two variables are interpreted as the percentage effects on wages of a woman's total experience, controlling for the years of service with her 1972 employer. Each of the human capital variables--education, training, and the various measures of work experience--was expected to be positive.

---

[15] It should be noted that this variable does not include the period between the 1967 and 1968 interviews. This particular year was omitted because the data, collected through a mail questionnaire in 1968, was less accurate than that collected through face-to-face interviews in other years. The concern was that inclusion of data from this year would bias the results--particularly those for women with few years of schooling.

Regressions were also run with a variable, based on the "weeks worked" measure, which represented the number of years a woman worked six or more months between 1968 and 1972. The results of this set did not differ significantly from the set which included the "weeks worked" variable. Therefore, because "WEEKS WORKED" is a more precise measure of recent work experience, only the results of the regressions which included this variable are presented.

Table 4.2 Specification of Control Variables for 1972 Wage Equations

Name (acronym)[a]	Form	Expected sign
1. Race (BLACK)	Dummy	-
2. Health (BAD HEALTH)	Dummy	-
3. Full-time or part-time worker[b] (PART TIME)	Dummy	-
4. Public or private employee (PRIVATE)	Dummy	-
5. Region of residence (SOUTH)	Dummy	-
6. Size of local labor market (SIZE)	Continuous	+
7. Collective bargaining coverage (COLBAR)	Dummy	+

[a] For dummy variables the acronym refers to the group which has been coded 1. For example, in the variable representing race, a woman was coded 1 if she is black and 0 if she is white.

[b] A full-time worker is defined as one who usually worked 35 or more hours per week at her survey-week job. Part-time work is thus defined as anything less than 35 hours per week.

The basic equation also includes the two variables which represent the occupational characteristics of particular interest here: the sex-label of an occupation (FEMOCC) and an occupation's skill requirement (SKILL). The sex-label variable is a dichotomy--1 if the occupation is stereotypically female and 0 if the occupation is stereotypically male. The manner in which it was constructed is described in the Appendix to the chapter. It was hypothesized that the coefficient of this variable would be negative. The occupational characteristic, SKILL, is derived from the "Specific Vocational Preparation" (SVP) index found in the Dictionary of Occupational Titles. The index ranges in value from 1 to 9; women were assigned the value of the SVP index for the occupation in which they served.[16]

Regression Results

The first stage of the empirical analysis involved a "pilot test" of the importance to wages of an occupation's skill requirement. The test was designed to determine if the effect on wages of the independent variables varied significantly across skill (SVP) strata. The results of a Chow test demonstrated that it was only necessary to stratify the women into three groups--low, medium, and high skill.[17] The LOW SKILL group is comprised of women whose occupations had a SVP value of 2 or 3; the MEDIUM SKILL group consists of women whose occupations had a SVP value of 4 or 5; the HIGH SKILL category includes women whose occupations had a SVP code ranging from 6 through 8.[18] Since it is clearly possible for wages to vary within each of these strata according to the precise skill (SVP) level of the occupation, dummy variables representing the "within stratum" SVP codes were included in the equations for the three strata.[19] Table 4.3 presents the regression results for the wage equations of women in low, intermediate, and high skill jobs.

---

[16] The index codes are hierarchically arranged so that greater values in the index represent longer periods of time. The definitions of the codes, as well as the way in which the index was modified to correspond to the Census three-digit occupational classification scheme, are described in the Appendix to the chapter. It should be noted here that no women were in an occupation which had a code 1 or a code 9; therefore these values are excluded from the analysis.

[17] The calculated F-statistic comparing the pooled results with results of the three separate skill categories was significant at $\alpha = .01$.

[18] Chow tests were also run to determine if stratification along racial lines was necessary. For the LOW SKILL and HIGH SKILL strata, the calculated F-ratios were not significant at $\alpha = .05$. For the INTERMEDIATE SKILL grouping the F-ratio was significant at $\alpha = .05$, but not at $\alpha = .01$. Because of the somewhat inconclusive nature of these results, the pooled equation for this skill grouping is presented in the text. The equations for each of the two racial groups are presented in Appendix Table 4A-1.

Low skill The regression results for the lowest skill category (equation 1) provides partial support for the hypothesis developed earlier regarding the probable lack of importance of experience to wage determination for women in this skill category. On the one hand, after controlling for the effects of tenure, the number of years a woman was employed between the year she left school and 1967 did not significantly affect her wages. On the other hand, more recent experience, i.e., the number of weeks she was employed between 1968 and 1972, did significantly influence her 1972 wage rate. These finding, when combined with the distribution of occupations shown in Table 4.1, lead to the conclusion that about one-third of the occupations typically acceptable for women reward only the "recent" experience that these women have acquired prior to joining their current employer.[20]

The regression results also indicate that the sex-label of an occupation significantly affects the wages of this group of women. All other things being equal, a woman in a typically female occupation (such as chambermaid) earned almost 20 percent less than her counterpart in a typically male occupation (such as janitor).

Medium skill For women in the intermediate skill jobs the impact of pre-1967 work experience on wages contrasts with that found for women in the lowest skill jobs (see equation 2). That is, controlling for tenure, experience gained prior to 1967 significantly affected wages. Consistent with the results for women in low skill jobs, recent work experience has a greater impact on wages than more remote experience. In this particular skill category, for every year prior to 1967 that a woman worked six or more months her 1972 wage rate increased by 1.0 percent, but for every week she worked between 1968 and 1972 her wage rate increased by one-fifth of 1 percent.

An examination of the occupational variables indicates that for this group both formulations of the sex-segregation argument are appropriate. On the one hand, women in typically female jobs earned

---

[19] In the case of the HIGH SKILL group, two dichotomous variables are included--one representing code 7 of the SVP index, and one representing code 8.

[20] It should be emphasized that this proportion relates to the number of typically female occupations and not to the number of women in those occupations.

a Variable does not apply to this regression.

9.5 percent less than women in typically male jobs. On the other hand, women who were in those jobs which required over six months of training (SKILL 5) earned 10 percent more than those in occupations which required between three and six months of special preparation (SKILL 4).

High skill As with the earnings of women in the intermediate skill category, the wage rates of those who were in occupations requiring a high-skill level were significantly affected by the amount of general work experience (see equation 3). In addition, the returns to recent work experience were again greater than the returns to experience in the more distant past.

The wages of this group of women were also strongly influenced by the skill requirement of the occupations they held, but an occupation's sex-label appeared to have no significant effect. Among these women, workers in occupations with the highest skill requirement (SVP = 8) earned approximately 26 percent more than those in occupations with the lowest skill requirement (SVP = 6). Controlling for the skill requirement, however, women in typically female occupations did not suffer economic losses relative to their counterparts in typically male occupations.

A Comparison of Skill Categories

The results of the three equations which included skill measures permit several substantive conclusions. First, as initially hypothesized, the return to an additional unit of human capital differed according to the skill requirement of the occupations in which the women were found.

Specifically, the economic returns to one additional year of education were greatest for women in the high-skill category and lowest for women in the low-skill category (6.4 percent, 2.6 percent, and 1.8 percent in the high, medium, and low-skill categories, respectively). Moreover, as shown in Table 4.4, the difference in the average educational attainment of women in the three skill categories is significant. These two findings seem to indicate that women in the low-skill category receive relatively low wages not only because of their relatively low educational attainment, but also because in this skill category of occupations, the returns to additional education are minimal.

The comparative results for the human capital factor, EVER TRAIN, are somewhat mixed. On the one hand, the return to completion of a training program among women in the high skill category is greater than that for women in either of the two lower skill groupings; and as seen in Table 4.4, a significantly greater proportion of women in the high skill category had completed some type of training. On the other hand, the economic return to training among women in the low skill category was greater than that for women in the intermediate skill group.

Finally, as has already been seen, after controlling for tenure, women in the higher two skill groupings were compensated for pre-1967 work experience, but women in the lowest skill groupings were not. Yet

Table 4.4 Means, Standard Deviations and z-Statistics for Selected Human Capital Variables, by Skill Category

Human capital variables	Mean	Standard deviation	z-statistics Difference in means	
			Low and medium skill	Medium and high skill
EDUCATION				
LOW SKILL	9.9	2.4		
MEDIUM SKILL	11.2	2.1	8.13**	12.00**
HIGH SKILL	13.0	2.5		
EVER TRAIN[a]				
LOW SKILL	.458	.499		
MEDIUM SKILL	.674	.469	6.35**	8.41**
HIGH SKILL	.880	.325		
YEARS WORKED				
LOW SKILL	10.8	7.2		
MEDIUM SKILL	11.6	6.7	1.56	.047
HIGH SKILL[b]	11.8	6.6		
WEEKS WORKED				
LOW SKILL	173.0	41.8		
MEDIUM SKILL	183.4	33.9	3.66**	4.50**
HIGH SKILL	191.9	24.5		

** Significant at $\alpha \leq .01$, 1-tail test.

[a] The mean of this dichotomous variable is the probability of ever having completed a training program, i.e., the proportion of women in the skill category who had completed a training course.

[b] The z-statistic for the difference in means between low and high skill is 1.96, which is significant at $\alpha \leq .05$, in a 1-tail test.

as seen in Table 4.4, the difference in the average number of years worked between school and 1967 for women in the low- and the intermediate-skill categories is not significant. For women in the low-skill category there was a significant pay-off to recent experience; as shown in Table 4.4 these women had, on the average, significantly fewer weeks of employment between 1968 and 1972 than the women in the next highest skill category.

A comparison of the results for the three skill categories also sheds light on the differential wage-effects of an occupation's sex-label and its skill requirement. An occupation's sex-label had the greatest negative impact on the wages of women in the low-skill stratum (-19.6 percent). In the intermediate-skill grouping an occupation's sex-label also had a negative impact, but here (all other things being equal) women in typically female jobs earned only 9.5 percent less than women in typically male jobs. In the high-skill stratum, the sex-label of an occupation had no significant impact on wages.

An examination of the effects of specific skill level on wages within each skill grouping indicates first that within the low-skill stratum an occupation's skill requirement (SVP) had no effect on wages. In contrast, within the intermediate and high skill strata an occupation's skill requirement was significantly related to wages. Moreover, as shown in Table 4.5, it is only for the high skill stratum that an occupation's sex-label is negatively correlated with its skill requirement. Within this category of occupations the probability is high that women in stereotypically female occupations will also be in those which require relatively few skills. The skill formulation of the sex-segregation argument is clearly more appropriate for this group of women workers.[21]

Table 4.5 Simple Correlations among Education, Skill Requirement and Sex-Label, by Skill Category

	EDUCATION	FEMOCC
	LOW SKILL	
FEMOCC	.08	--

IV CONCLUSION

By examining the determinants of women's wages, this chapter has attempted to clarify several issues. The first matter discussed was the likely importance to women's earnings of previously accumulated human capital, particularly work experience. In this context it was posited initially that occupations vary in the level of skills they require of their incumbents, and therefore can be expected to vary in the rewards they offer for a worker's accumulated human capital. By implication then, women's wages would be adversely affected by discontinuities in their work histories only if they were in occupations which require a relatively high level of skill.

The second issue discussed at the outset of the chapter was the impact of sex-stereotyping of occupations on women's earnings. In this context it was argued that because "women's" jobs may require fewer skills than "men's" jobs, and for this reason offer lower wages, the true (i.e., net) effect of an occupation's sex-label could only be ascertained after controlling for its skill requirement.

Thus, a major theme of the chapter is that clarification of the impact on wages of both factors--work experience and sex-stereotyping--necessitates a consideration of differences among occupations in the skill level they require of their incumbents. A second theme is that for a given occupational skill level, the relative importance to wages of human capital factors and occupational sex-typing can only be ascertained through a simultaneous consideration of both.

The empirical section has provided some support to both of these points. It has been shown that the relative importance of work experience to wages depends upon the skill requirement of the occupation which a woman holds. Specifically, controlling for the effects of tenure, one-third of the occupations typically open to women reward only the most recent work experience. It has also been found that explicit differentiation must be made between the skill requirement of an occupation and its sex-label, for the impact of sex-typing varies according to the skill requirement category in which occupations are found.

Taken in combination, these results have implications for attempts to reduce the male-female wage differential. It does appear that as long as women do not participate in the labor force continuously their wages will to some extent be lower than those of men. However, this does not imply that government actions to improve women's relative income position would be futile. Public policies which encourage the movement of women into either typically male occupations, higher skill occupations, or both, will have a significant impact on their earnings.

APPENDIX TO CHAPTER IV

CONSTRUCTION OF THE SKILL-REQUIREMENT AND SEX-TYPING VARIABLES

The Skill-Requirement Variable

The measure of skill requirement is the index of "Specific Vocation Preparation" found in the Supplement to the Dictionary of Occupational Titles (3rd edition), 1966. In the Dictionary one of the nine SVP codes listed below is assigned to every six-digit occupation. For our purposes the six-digit occupations were first classified into their appropriate three-digit Census category (1960 classification scheme) using the conversion tables found in U.S. Department of Labor (1970). Each three-digit category was then assigned the modal SVP code among its constituent six-digit occupations.

Specific Vocational Preparation Codes

SVP	Description
1	Short demonstration only*
2	Anything beyond short demonstration up to and including 30 days
3	Over 30 days up to and including 3 months
4	Over 3 months up to and including 6 months
5	Over 6 months up to and including 1 year
6	Over 1 year up to and including 2 years
7	Over 2 years up to and including 4 years
8	Over 4 years up to and including 10 years
9	Over 10 years*

---

*Because no women in the universe used for the regressions fell into this category, the code is not included in the empirical analysis.

The Sex-Typing Variable

It should be noted first that while researchers in the area of occupational segregation generally agree that the majority of jobs can be categorized as stereotypically female or stereotypically male, no consensus has been reached on an operational definition of either. For example, while one author implicitly defined a female occupation as one in which 70 percent or more of the incumbents were women (Oppenheimer, 1973), others have used 32.8 percent (the proportion of the labor force which was female in 1960) as the criterion, (Roderick and Davis, 1974). Finally, Bergmann (1973) defined a "female" occupation in 1960 as one in which at least 45 percent of the incumbents were women. At that time women constituted 32 percent of the labor force.

In this study the variable representing the sex-typing of an occupation was constructed by using the proportion of the labor force in 1970 which was female (38.1 percent) as the reference point. Any occupation in 1970 in which at least 43.1 percent (38.1 + 5 percent) of the incumbents were women is defined as a typical occupation for women. (This category contains 66 of the 295 three-digit Census occupations, using the 1960 occupational definitions and excluding the armed forces.) Any occupation in which 33.1 percent (38.1 - 5 percent) or fewer of the incumbents were women is defined as an atypical occupation. The residual category contains 11 occupations, i.e., those in which women represent 33.2 to 43.0 percent of the workers. These occupations are considered to be neither stereotypically female nor stereotypically male, and are excluded from the analysis.

The 1970 data on the occupational distribution of women were put into the 1960 Census classification scheme because the occupational data from the National Longitudinal Surveys are coded according to the 1960 definitions. The computations were based on data of the experienced civilian labor force found in Table 1 in U.S. Department of Commerce (1973). Figures for each occupation have been reclassified into 1960 occupational classifications according to the distributions found in Priebe, Heinkel, and Greene (1972).

CHAPTER V

PATTERNS OF CHILD CARE UTILIZATION AMONG WOMEN WITH PRESCHOOL CHILDREN

Richard L. Shortlidge, Jr.*

While there are numerous studies of child care in the United States, few have examined patterns of child care utilization with a multivariate statistical framework.[1] In this chapter two adult-oriented child care issues are explored in detail. They are adult-oriented in the sense that they relate either specifically to the child care requirements of women who work outside the home or to those of women who are not in the labor force, but would like to seek employment outside the home.[2] The two issues may be stated as questions. First, what characteristics explain why some mothers seek child care outside the family while others rely on family sources? Second, to what extent would the availability of free day care centers encourage mothers with preschool children to enter the labor force?

These questions are treated sequentially in the sections that follow, utilizing a group of women who had at least one child three to five years of age in either 1967 or 1971. The process of arriving at this particular universe is worthy of elaboration, for it may serve as a guide to future research on this subject. Historically, child care research has concentrated on mothers of children under six years of age, without paying careful attention to potentially important and significant child-age demarcations within this group. The author's preliminary analysis using the National Longitudinal Surveys suggested that choice of a child care arrangement was contingent on whether or not the children under six were less than three or between three and five. Even more important was the behavior of other factors in the model. That is, the effects of the other independent variables were dependent on whether or not the woman was making an arrangement for an infant or a preschooler. This finding led to the stratification of women with children under six years of age into two groups: those with only children under three years and all others. However, because of the limited number of women in our sample who had a child under three years in 1967 and 1971, the results for this group are not presented in this chapter. The author hopes that future studies of child care, using a broader data source, will attempt to explore in greater depth the effects of the child's age on child care choice.

---

*A special word of thanks and gratitude is extended to Patricia Brito, Randall Reichenbach, Mark S. Smith, and Keith Stober for their excellent research and computer programming assistance.

[1] See Jusenius and Shortlidge (1975); Keyserling (1972); Lajewski (1959); Low and Spindler (1968); Shortlidge, Waite, and Suter (1974); and Westinghouse Learning Corporation and Westat Research Incorporated (1971). For the only other multivariate analysis which specifically examines the determinants of child care choice, see Duncan and Hill (1975).

[2] The distinction between adult-centered and child-centered needs is an important one from the standpoint of legislation and its fiscal requirements. The failure to unify the position of those who advocate child care as a "work related right" and those who advocate it as a "child's right" to an early educational experience historically has been an important weakness in efforts to achieve a national commitment to child care. For various historical descriptions of this conflict see Bourne, Medrich, Steadwell, and Burr (1971); Dill (1973); Guggenheimer (1973); Hagen (1973); Kerr (1973); and Miller (1975).
